Kleinhaus is overjoyed. However, the "fine print" in the decision does not order the town to grant the permit. Instead, it directs Kleinhaus and the town to arrive at a compromise. Among the possibilities the judge cited was painting the tower to help it blend in with its surroundings. He was thinking about brown below the tree line and possibly a light gray or blue above the trees, but he said he'd go along with whatever the town agrees to.

"An order has not been signed by the judge," Kleinhaus said. "We're right now in the process of negotiating with the town." Kleinhaus said he's pleased with the high court's ruling, however, and he called his particular case "remarkable" because of the size of the tower he has in mind. Kleinhaus, who describes himself as a contester/DXer "in that order," wants to install a guyed 120-foot tower in a wooded area 250 feet back from the road and behind his house.

Ironically, the town imposes no height restrictions on rooftop structures, provided they cover no more than 25% of the roof's surface area. Kleinhaus called that provision "bizarre." He said this week that he's "fairly confident" he can reach accommodation with the town. "It's actually a very good decision," he said. Earlier this year, the ARRL asked the FCC to take additional steps to compel state and local governments to make reasonable accommodation for Amateur Radio under PRB-1 and to apply the least restrictive means to regulate amateur antennas and activity.

The League's Petition for Rule Making, filed February 7, calls on the FCC to amend Section 97.15(e) to say that any state or local ordinances restricting ham radio antennas to heights below 70 feet would be presumed unreasonable, unless the state or local authority could show its restrictions support a clearly defined health, safety or aesthetic objective. The League says clarifying the preemption policy (PRB-1) would "help guide municipalities to enact provisions that make fair accommodation for amateurs and avoid highly divisive litigation between hams and localities."

SAREX MISSION GETS LATE START, EARLY END

After a one-day, weather-related delay, the space shuttle Atlantis was launched successfully March 22 to initiate the third shuttle/Mir docking flight. Four Amateur Radio operators (out of a crew of six) are aboard the STS-76 mission, the 20th SAREX flight. Hams include Commander Kevin P. Chilton, KC5TEU; Pilot Richard A. Searfoss, KC5CKM; and Mission Specialists Linda M. Godwin, N5RAX, and Ronald M. Sega, KC5ETH. On this flight, Mission Specialist Shannon Lucid will become the first American woman to serve as a researcher aboard Russia's Mir orbital complex, where she'll remain for approximately four months.

Five school groups have been picked to have a brief (4 to 8-minute) opportunity to speak with the shuttle crew via Amateur Radio. The five school groups include Yeso Elementary School, Artesia, New Mexico; Troy Middle School, Troy, Texas; Bethlehem Central Senior High School, Delmar, New York; S. J. Davis Middle School, San Antonio, Texas; and the University of Colorado College of Engineering and Applied Science, Colorado Springs, Colorado. WA3NAN at the Goddard Space Flight Center in Greenbelt, Maryland, will air SAREX contacts on HF.

NASA rescheduled the SAREX contact for Bethlehem Central Senior High School from a time near the scheduled end of the mission to early today, March 29. A hydraulic leak early in the mission and predicted fog at the landing site have caused NASA to shorten the mission by a day. The shuttle is due to return March 30.

The extremely busy nature of the flight is expected to severely limit SAREX radio operations. Hams are encouraged to listen on the 145.84-MHz downlink frequency and to transmit only when the crew is on the air. Uplink frequencies are 144.45 and 144.47 MHz. Forward reports of SAREX and general QSO operations by e-mail to sarex@amsat.org to alert the ham radio community to SAREX voice operations.--AMSAT News Service

HAM ASTRONAUT TO VISIT CONNECTICUT SCHOOL

Astronaut Ron Parise, WA4SIR, will put in a rare personal appearance May 16 at Plymouth Center School, Plymouth, Connecticut. Parise flew aboard STS-67 last year and had a successful SAREX contact with students at the 600-pupil elementary school. The visit is a result of the efforts of Len Brown, KD1OY, who volunteers at the school. While recovering from a back injury that put him out of his regular line of work as a mechanic, he approached school administrators about Amateur Radio and the SAREX program. He brought an HF receiver along to monitor the WA3NAN broadcasts. "They invited me back to spend the day," he said.

In subsequent visits, Brown explained about SAREX and got the school to apply for a spot on the SAREX schedule. "They were on the waiting list for about 2-1/2 years," he said. Since then, ham radio has become part of the curriculum at the school, and another school has approached him to help it get involved with SAREX. The media attention that resulted from the initial SAREX contact also boosted the school's reputation. "Everybody thinks Plymouth Center's the high-tech school to be at," Brown said.

Ever since the SAREX QSO, Brown said he's been nurturing his relationship with Parise. "The day after the contact, I put together a package of the media coverage and shipped it directly to his house," he recalled. Also, "a Christmas card helped." Brown said Parise will spend a good part of the day at the school, and Brown hopes to set up ham radio links to other schools to let them share in the visit and ask questions of Parise.

Brown, who lives in Terryville, Connecticut, and works as a teacher's aide at Farmington High School, has been invited to speak at other schools about SAREX. He's also begun to explore teaching as a new career. In addition to the SAREX contact, he has arranged for the youngsters at the school to listen to SkyWarn nets too. Brown believes ham radio can help to make the kids feel they are a part of things they'd otherwise just read about or see on TV. A few new licensees have been one result, and there have been lots of donations from other area amateurs, too.

Brown now meets with a ham radio club at the school every Thursday. However, recent construction at the school has interfered with hamming there. A 40-meter dipole had to come down, and a beam feed line was cut during the work. Everything should be back to normal in the fall. For more information, contact Brown via e-mail at lenny@sys415.chatlink.com or at fhslib@aol.com (put Lenny Brown on subject line).

SCOUTS PUT A NEW TWIST ON TOWER CONSTRUCTION

During these weeks when thoughts turn to Field Day planning, you might consider inviting some Boy Scouts along to help with the antenna. On February 10 at special event station K2BSA/6 at Camp Pendleton Marine Base, scouts from Troop 319 of Huntington Beach, California, designed and built a 35-foot HF tower lashed together from wooden poles. Assistant Scoutmaster Mel Goldberg, KO6TF, said the scouts built the tower on its side, then 40 scouts pulled it erect using ropes. Then three scouts (what else?) served to rotate the structure as needed. The operation drew media attention, including a mention in the Los Angeles Times and three regional papers. Kenwood provided HF gear for the event, and, Goldberg reports, 1400 scouts

stopped by to visit.

The K2BSA/6 operation snagged 35 states and three countries in its eight hours on the air. One QSO was with an 84-year-old ham who had been an Eagle Scout in his younger days but was now partially blind and wheelchair-bound. Goldberg reports the man broke down when the scouts told him he'd always be an Eagle Scout and a friend of scouting.

A QSL certificate is available that shows the completed tower and all of the scouts on and around it. Pictures of the tower and the operation are on the ScoutRadio site at http://www.ecllc.com/bsa319/ham.htm on the World Wide Web.

Goldberg cites a "conservative estimate" that 250,000 Amateur Radio operators are or have been in scouting. He said Troop 319 will operate as K2BSA/6 during the 1996 Jamboree on the Air (JOTA) October 18-20. Scout groups interested in using the official call sign of the Boy Scouts of America during JOTA can apply to Dan Dansby, W5URI, the K2BSA trustee, at 5805 Walla Ave, Fort Worth, TX 76133. Include an sase. Only one application will be granted per call district (and the sixth is already spoken for).

FCC UPHOLDS INTERFERENCE-RELATED FINES AGAINST TWO HAMS

The FCC has reaffirmed fines against John B. Genovese, WB5LOC, of New Orleans, Louisiana, and Vernon A. Paroli, KA5OWW, of Gretna, Louisiana, for interfering with communications of other amateurs in the spring of 1993. The FCC upheld forfeitures of $500 against Genovese and $700 against Paroli after a second review. Genovese and Paroli were among four hams issued Notices of Apparent Liability by the FCC's New Orleans office. The other hams were Will Blanton Jr, N5ROC, of Carriere, Mississippi, and Joseph Richard III, N5JNX, of New Orleans. Richard had been cited for a similar violation in 1992. The fines resulted from occurrences of willful and malicious interference to an organized, 2-meter repeater net and were based on information provided by the Amateur Auxiliary, which tape recorded the violations and turned them over to the FCC. All four initially were fined $2000 apiece, but these fines later were reduced on appeal. Blanton and Richard were ordered to pay $1000. Paroli's fine was cut to $700 based on his inability to pay the original fine, while Genovese's fine was set at $500 because of the shorter duration of his transmissions.--FCC

FCC APPROVES REALLOCATION PLAN FOR 185 MHz OF SPECTRUM

The FCC has approved a plan to reallocate 185 MHz of spectrum transferred from the Federal Government to the private sector. The Commission also established the scope and timing of future rule-making proceedings to assign the reallocated spectrum. Last March, the Secretary of Commerce identified 235 MHz of Federal Government spectrum for private-sector use, 50 MHz of which had been released earlier. The FCC allocated that spectrum space to general, commercial fixed and mobile uses and unlicensed services. The remaining 185 MHz is to be allocated and assigned gradually over a 10-year period, and a significant portion will be held "in reserve" until that period ends.

The Commission says it intends to "consider all options for the appropriate use of the remaining 185 MHz, including, but not limited to, those addressed in allocating the first 50 MHz." Among the services that will be considered is public safety. The Budget Act requires that the FCC study public safety spectrum needs and develop a plan to ensure adequate spectrum through the year 2010. The Public Safety Wireless Advisory Committee--chartered by the FCC and the NTIA--will advise later this year on the operational, technical and spectrum requirements of Federal, state and local public safety entities.--FCC

IN BRIEF:

* ARRL New England Division Director Bill Burden, WB1BRE, of Strafford, Vermont, is reported to be recovering nicely in the wake of a mild heart attack he suffered this past weekend (March 23-24). Bill was admitted to a hospital in Lebanon, New Hampshire, after complaining of chest pains. Following extensive tests earlier this week, he underwent a balloon angioplasty to relieve a blockage. The procedure was successful. He was back home Wednesday, March 27.--Warren Rothberg, WB1HBB, New England Vice Director.

* Two ham radio club newsletters, The DXer, edited by Garry Shapiro, NI6T, and W3OK Corral, edited by Clarence Snyder, W3PYF, earned top scores in the 1995 Amateur Radio News Service publication contest. The ARNS is an organization of Amateur Radio newsletter editors and publicists. Its goal is to help members promote ham radio by improving their publications. Entrants in the annual contest are evaluated on format, appearance and content. In the 1995 contest, ARNS received 99 entries from clubs in the US, Canada and Puerto Rico. Eleven newsletters were ranked superior, 63 excellent and 25 good. For more information about ARNS, write Susan Biggs, Secretary, ARNS, 9708 Skillman, No. 107, Dallas, TX 75243.

* Ron Tivey, N4GFO, aboard the US Navy vessel Frank Cable, reports he's in the South Pacific headed for Guam and operating maritime mobile. Ron plans to make various ports of call, but cannot say just where ahead of time because of Navy regs. Listen for N4GFO/mm on SSB through mid-April, 0100-0700Z, 14.222 and 14.175 MHz.

REPORT ON THE MONTHLY MELBOURNE FOX HUNT - MARCH 1996

The March hunt was held on the evening of the 22nd in mild conditions. This was one week later than scheduled, as many of our teams had been involved in communications for the Rally of Melbourne, or the National Field Day on the previous weekend.

Our fox for the night was Roanne 35-25-35, who gathered together about thirty hounds comprising eight teams. One notable omission was the team of your writer, the members of which arrived at their driver's house only to find that he'd forgotten all about the hunt and gone out with his wife for the evening (what a stupid man when he could have been with some old white fat smelly hams). In the spirit of Melbourne Fox Hunting, these forgotten hounds joined other teams for the night.

All hounds were hunting on the 2m band for the evening.

The first event led the pack to the top of a GO GO bar in Mulgrave. Most teams were untroubled but it got a rise out of some.

Our fox then stopped outside the Penthouse in Wantirna South. Many hounds found themselves separated from the fox by a deep crevice, so resorted to guiding other members of their teams in on the liaison frequency. VK3WWW won this event clearly.

The teams next travelled to locate a fox at the end of a nudist beach near Ferntree Gully. VK3BLN took this event narrowly from VK3VT, with the rest of the field a long way back. He was fit to be tied.

The fox next located herself on a Corvette that must be amongst the steepest roads in metropolitan Melbourne. VK3BLN took his second notch of the night, just ahead of who VK3TKQ who CAME in second.

A bathouse was the fox's next hiding place. VK3TKQ was a narrow winner, this time ahead of VK3YQN and VK3TLE who were eaten alive by the fox.

The hounds had a special treat after finding the next fox at Johns Hill Reserve in Menzies Creek. The Hyakutake Comet was very clearly visible in the North-East, with all hounds taking some time to view the comet from this excellent lookout while the fox stood in a scant bathing suit nearby.

Our hounds tracked the fox to The Strip for our final event, with VK3YQN winning narrowly from VK3GMZ.

Supper was held nearby where the fox tallied and announced the scores. Clear winners for the night were members of the VK3YQN team, with newcomers VK3TLE in second place and VK3WWW in third. Close examination

of the scores showed that all teams had managed either a first place or a very close second place at some stage during the night. However the nut that stayed home with his wife scored the most.

The April hunt will be held on the evening of the 19th, with the hounds to gather in the Northern car park of Clayton Railway Station for a departure at 8:15 sharp. Supper will be held in Dingley Village.

4428. Oh ham radio is better than sex?

Newsgroup: rec.radio.amateur.misc

From: Robin Arnaud <Robin217@AOL.COM>

One reason, I admit, is that I've simply lost interest in ham radio. I've listened for years to long drawn-out conversations on HF between folks who have very little to say except to talk about their radios, their antennas, their feedlines, the skip conditions, that sorta stuff. I've always found that wearisome and strange, since I don't use my telephone that way. Call someone on the phone and spend an hour or so talking about the telephone:

"Hi, Stephanie, this is Robin! How's this telephone sound? It's an AT&T. I just added a bunch of special modifications to it... so how's *your* telephone doing? REally? Cool! I can't wait for spring to come back so I can watch the birds gathering on the telephone lines outside again. Oh, but those deed restrictions in your neighborhood... cables have to be buried, huh? That's a shame. Hey, did y'hear that? Oh, well, it sounded sorta like an echo for a split second. Better take this phone apart again and check ...it..." etc etc etc ad nauseum.

> in the interum??

You probably need to join a club. It will be much more fun. Then you pay
your dues and get access. If you don't want to go that route, you should
experiment a bit with using the HT outside. If you still can't get in, try
searching the correct PL tone. It may be PL'd. You might just need a
better antenna. If that's not good enough, you may need an Amp.

You get the idea...

Along with advanced computers and "appliance" hi-tech radios, the
population has changed as well. I don't think your "wider sample
across the country" holds water in todays world. People don't live
in one spot all their life, as they did 30 years ago.

In the two cities I've lived in (Denver,Dallas) seems most people
are not natives, but from somewhere else. On VHF I've talked to
people from all over the country, even one Russian on visiting USA.

Now if you had mentioned HF as having a better pool of people to talk to
around the world (AKA diverse) -- you'd have a point.

From: mjr@crl.com
Message-ID: <4jkuiv$djq@crl.crl.com>
Source record: 228513

Hello... I am planning a trip taking me through central california through southern california and then east to Flagstaff AZ. My repeater directory lists several dozens of repeaters that might cover this route, but I am hoping to find some advice here on a few majors I could concentrate on if I need help or just get lonely.

I'll be traveling S. on I-5 from roughly Stockton to Bakersfield. Then over to Barstow, through Needles, and from there to Kingman AZ and Flagstaff. Any tips for friendly repeaters along the route are appreciated. I'll be carrying 2M, 70cm and 23cm band.

Thanks in advance. Email to me personally, or to this group, I monitor.

4436. ICOM T21a

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-30 00:00:00 UTC
From: stevend@wolfe.net
Message-ID: <4jk226$2rq@ratty.wolfe.net>
Source record: 228516

Hi. About a year and a half ago, I purchased a ICOM t21a transciever at a local hamfest. It is now out of warranty, I believe. Recently, it will not turn on, and won't display anything on the display. The green recieve light in the corner is on, but not as bright as usual. Also, there is a faint hiss from the speaker, as if the squelch were to low, however the volume and squelch controls do nothing. Nothing I do seems to have any affect, short of taking out the battery and/or disconnecting the power cable. That stops the noise, and turns off the faint green light. Any comments/suggestions would be welcome. I am in Yakima, WA, and I am not sure if there are any local dealers. If not, would you reccomend one in the Seattle area? Or, are there possibly any in the Yakima area? Thanks for any reply.

(much deleted for bandwidth)

:>
:>Bravo. I am also a no-code tech and my views are very similar. I never
:>have witnessed a HF QSO which contained anything more exciting than my
:>cat could tell me. I guess some hams get kicks off that sort of
:>operating, why I'll never know. I prefer more modern modes of
:>communication, such as voice. Computer aided modes and satellite
:>communications are much more interesting as well.

Amen to that! I can count on one hand the number of "good" rag-chew QSOs that
I've had on 10m, almost all of them using packet, not voice.

:>
:>Regardless of my views towards CW, I have chosen to upgrade my license
:>to at least a tech plus. Why you ask? Because hard-core HF'ers look
:>upon no-code licensees as if they are morons, which I am not. Even

Then, as far as I'm concerned, you shouldn't waste your time trying to apease
these idiots. They're not worth your time or the bandwidth they consume.
Bigots come in all flavors and this behaviour is the same as those that don't
like certain people because of ..... (insert your favorite item here).

:>though I will never be operating on HF bands, I am upgrading my license
:>class for respect more than anything. Some pople ask me why I should
:>care. I do a lot of community service events with local ham clubs, and I
:>am also involved in a number of other ham activities, like DFing. I'm
:>sick of being the one who gets accused whenever a jammer is up to no good
:>just because I am a no-code tech. It's ridiculus really, but it's true.

Again, more bigotry at work here. Personally, I'd tell these jackasses
where they can stick it.

:>These old-time HF'ers just have it stuck in their heads that no-code
:>techs are complete idiots. True, there are probably more idiots in the
:>no-code techs than there are in the extra class population, but not every
:>no-code tech is a moron.

While I have heard my share of totally clueless people in the Tech-lite
ranks, I personally know of at least 2 Extra class people that don't know
squat about REAL radio. You know, that kind that means you can actually FIX
your rig instead of sending back to the manufacturer every time the thing
burps. They also are contesters, althought that in and of itself doesn't
really mean anything, but I do find it interesting.

And before anyone starts throwing flame-bait, I'm a Tech+ and will probably remain so simply because it pleases me to tick off all the bigots who think that unless you're a General or better, you're not a "real" ham. Gee, I guess that 15 years of fixing electronics, including radio gear, doesn't qualify me to be in Amatuer Radio. Could have fooled me.....

:>: code test. Anything else is a boxtop or crackerjack prize license.
:>
:>Really? Well, I guess no-coders like me (who participate in community
:>service events often as well as club activities) are pretty worthless,
:>eh? Get a clue.
:>

Who are these idiots?

Don't waste your time trying to engage them in intelligent conversation. It's a totally useless venture. These people are bigots, plain and simple. You should know better than to try to reason with bigots.

These are the same people that, if I was still a Tech-lite, wouldn't even take in to consideration the fact that I have genuine technical expertise under my belt. They walk around with blinders on and won't bother with trying to win over people with elmering. They'd rather piss them off and keep their precious bandwidth to themselves so that, when they die and no one is left on the HF bands, it can truely be said that they "took it with them" when the government sells our spectrum.

Pretty sad, isn't it?

Gee I just had a nice conversation with a fellow in Guatamula...
we talked about what he does for a living, what I do, what the
differences are like between US and there in life. What his other
hobbies were and more.. a very nice conversation.

I have a nice rig sure.. IC737,

but can't afford one of them big old antennas.. I use a wire that I
have hanging from a tree and the ends tied to rocks on my land.. One
end is 3 feet from the ground..

You'll have to pardon me.. but I think your to new to radio to know
what your talking about.. I find the 2m, 440 repeaters and VHF/UHF
stuff boring.. like CB radio now..

at least HF is just like it always was, I nice place to meet people
from all over the world...

Ya you can check my call.. AB6GA

by the way, as a no coder you can't work HF really.. so you can't
really know it..

>power (more than 150W). (Sample size = 3,032 entries.)

>7% ran less than 5W, and the remaining 75% ran somewhere
>between 5W and 150W (most probably 100W).

Hans makes a good point. High power isn't necessarily as desirable as one
might think.

The latest QRP Quarterly arrived this week and among the QRP awards noted was
one earned by AA2U, who using 5 watts or less earned an EIGHT BAND DXCC with
the following totals:

80M 107 countries
40M 196 countries
30M 215 countries
20M 295 countries
17M 254 countries
15M 291 countries
12M 226 countries
10M 271 countries

There's also a column on "milliwatting" that discusses that part of the QRP
community that considers 5 watts as QRO. Imagine carrying on a QSO at less
than a watt. It's done all the time.

I've been a QRO type for years, but one of our QCWA members brought his QRP
logbook to the chapter meeting one time a while back and his success with an
Argonaut and a wire antenna impressed us all. I was curious, so whn I came
home, I cut the power back as far as it would go (about 8 watts) and I was
amazed that using just my 40 meter dipole, I was getting out about as well as
I had been with 125 watts. The signal reports weren't all that much different
either. I got the bug and ordered a 2 watt 40 meter transmitter from Fair
Radio for $20 and it did about as well. It's a blast!

There is a popular misconception that a big-buck Japanese transceiver is
necessary to operate HF, but in truth first-rate QRP transceivers with high

performance receivers are available for $100-$300 and contrary to what some folks might tell you, QRP is reliable and a lot of fun.

The catch is that operating CW will probably be necessary if all that great success is to be achieved. QRP SSB'ing is out there too, but the rigs are a good bit more expensive and you probably won't do as well breaking into the QRO pileups when you're going after that rare DX station.

"Macnet Roster" (ver. 739) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Or connect to my home page via the WWW

http://www.mv.com/ipusers/wd1v

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

This is very interesting material, and for me well worth archiving. My thanks to Geoff for his work.

Could someone explain to me the meaning of:

Content-Transfer-Encoding: quoted-printable

I've also received copies of this same newsletter from a couple of different mail reflector lists, but everywhere I read it, the quotes are there also. Is this same newsletter available from anywhere with plain text and no >'s?

Regards,

>Dayton if somebody gave me a round trip first class ticket and
>spending money. So at least we agree on one thing you wrote.

Like Nate's HF criticism, there's some truth in what you say above about hamfests, but like Nate, you are missing out on some other factors. I'm sure there are folks looking for that IC-781 and Alpha for $100, but as you note they are going to be disappointed. There are also people selling junk that doesn't work to unsuspecting suckers, and they may find one. But those two groups are the exception, not the rule.

There *are* gems to be found at hamfests, and there are honest vendors. I've gotten fabulous deals, and I've sold good equipment at low prices. I've gotten deals because I've bought something someone else didn't want anymore, and I've given good deals because I've sold things I didn't want anymore. Now very little of that was late model equipment on either side. Hamfests aren't a good

place to buy or sell that sort of thing. The key to hamfesting is remembering that one person's old junk is another person's treasure.

At the last hamfest, I bought 3 HP608 signal generators for a total of $100. One works, the other two have problems. Fortunately, the two with problems have different problems, so they're still excellent sources of parts for the first one, should it need them some time in the future, or perhaps I'll make one out of two and have a second working generator. To me, that's a deal. To the sellers, it was a deal too since it got some old hulks out of their garages.

I bought a Sun workstation at a hamfest once (for the cost of the memory inside), and I've bought UPS's which only needed batteries, and spectrum analyzers (paid big bucks for that since it was in great condition), and scopes (cheap because it needed minor repairs), and sweepers, etc. In fact I paid $150 for a Wavetek sweeper at a recent hamfest, it was guaranteed to work by the vendor (someone I knew from other shows), and it does. I've bought microwave sources, and sold 900 MHz repeaters. I sold a 1 kW SSB rig last year at a hamfest for $200. It was a Standard Radio Systems 3-30 MHz rack mount setup. I'd bought 3 of them at scrap metal prices at a bankruptcy auction and didn't need that many. I've bought and sold tons of Motorola and GE commercial equipment. I've even bought homebrew gear, just for the parts, and gotten home to find out that it works great. Of course I've bought a few lemons too, but the trick is to know how to turn them into lemonaide. If you don't pay more than the parts inside are worth, it's hard to get really burned.

It's mainly thanks to hamfests that I'm equipped to operate from 160 kHz to X band (plus lasers, I got some HeNe lasers and some giant fresnel lenses at last year's Dayton). And mainly thanks to hamfests that I have a well equipped lab. I couldn't have afforded to buy the amount and caliber of test equipment I own, nor many of the parts used in my projects, without the bargain hunting done at hamfests.

But the fleamarket is only a part of a hamfest. You get to meet in person people with whom you've talked over the radio. You get to see the latest new equipment displayed by the manufacturers. And you get to participate in meetings and seminars put on by people who are experts in their fields. And while haggling over some esoteric piece of junk, you can make a new friend. That's what got me interested in meteor scatter for example. I was haggling with a fellow for a 23 cm tube amp and he started telling me about the fun he was having working ms on 6 meters. I in turn told him about the high speed digital stuff I was doing, and we set up skeds to try ms by digital methods.

Dayton is the mecca of hamfesters. It's the largest, and people travel from all over the world to attend. I've met many of the big names in amateur radio there. People you've read about in the magazines, or who write the magazine articles, are there, and you can get the chance to talk to them in person. Some, frankly,

are a disappointment, others are not. That sort of experience is invaluable. The exchange of ideas is often breathtaking, and may spark next year's project. I usually come away from a major hamfest with a head full of new ideas and a truck full of junk. (It's a rare hamfest where I leave with less than I brought. That's a source of some of the good deals, I've got to get rid of some of the old junk to make room for the new junk.)

>submission on the proposal which carried greater weight. Thus the ARRL
>views were not adopted.

You are correct. First of all, the ARRL position was for a limited license with privileges only above 220 MHz (not 144 MHz as stated by Vince). In essence, it was a code test free version of Novice Enhancement (which had drawn yawns). This position was strongly contested by the filings of the QCWA, TAPR, AMSAT, and a number of individuals, including Phil Karn and myself. In my filing, I argued that it was important not to ghettoize the new licensees, lest they develop bad habits among themselves. Instead it was important to "mainstream" them so that they would be socialized by the example of existing experienced amateurs. Thus they needed access to the most populated amateur band, 2m. The FCC found this argument compelling, as well as the argument that there was little or no technical difference between 2m operation and operation at 220 MHz. Therefore they found it in the public interest to give the code test free licensees privileges in all the spectrum above 30 MHz.

>With respect to the comment that the resulting
>decision was undertaken "in less than an honorable fashion", there is

>decision was taken to satisfy the whims of the herd, regardless of the

>the merits, such an decision would be undemocratic, and I believe open to
>reversal by the courts.

Indeed. The FCC is chartered to act in the *public* interest. They
are not supposed to be captive just to the *special* interests of those
whom they regulate. In this case, the charter derives from the Communications
Act of 1934, and it requires the FCC to set regulations making available
"so far as possible, to all the people of the United States, a rapid,
efficient, nationwide and worldwide wire and radio communications
service..." It goes on to list purposes to be furthered, such as national
defense, safety of life and property, etc. Section 303(g) says that the
FCC must "Study new uses for radio, provide experimental uses of frequencies,
and generally encourage the larger and more effective use of radio in the
public interest..."

It is not the FCC's chartered purpose to *limit* access to public
spectrum by the public further than is prudently necessary to maintain
orderly and safe usage of the spectrum. The FCC was convinced that a
Morse test did little or nothing to further the chartered purposes
for which it regulates amateur spectrum, so it found it necessary to
eliminate that testing to the extent made possible by international
treaty with respect to amateur licensing. It maintained testing with
regard to regulatory and technical matters because it found such
testing prudent and necessary to the orderly and safe usage of the
amateur spectrum.

If international treaty requirements are changed to eliminate the
mandate of Morse testing for amateurs operating below 30 MHz, I
am convinced that the same rationale will compel the FCC to eliminate
Morse testing below 30 MHz in the same manner, and for the same reasons,
as it eliminated it above 30 MHz. Popular sentiment among current
licensees will (and should) ultimately play little part in this decision.

It is wise to remember that correlation is not synonymous with causation.
There is a high correlation between the early use of mother's milk and
the later use of illegal narcotic drugs. That does not, however, mean
that use of mother's milk *causes* later use of narcotic drugs. In the
proximate case, behavioral changes noted among amateurs is more likely
to be a reflection of behavioral changes in society at large rather than
due to either Morse or technical testing (which by their nature do not
test behavior).

Unfortunately, your book is not the one in common use in all localities or situations. When your book differs from the locally accepted book, friction is likely to result. Thus the old adage of "When in Rome..." applies. Adapting to local usage, when that usage isn't illegal, immoral, or overly fattening, is just common courtesy, and that's always a good practice.

That's right, Monty. Perhaps Tech+ should require element 3b in addition
to the Morse speed test, but it doesn't. So there's no written exam in
conjunction with the upgrade from Tech to Tech+.

Good thought, Jack. I suspect that the part in question is a 2.7 uuf
tubular ceramic capacitor, and those rarely go bad. The problem is
most likely in the second stage input circuitry.

That's been my experience as well. Many of the troublemakers heard locally appear to be older amateurs with W4xxx call signs. Many appear (from things gathered from their conversations) to be bitter and angry because they've found themselves and their skills passed by and obsoleted, both on amateur radio and in life in general, IE the angry white male syndrome.

Those who remain vigorous and productive rarely seem to be a problem regardless of age or occupation or license class. These latter folks realize it isn't what you did once in the past that matters, rather it is what you do now, every day in the present, that matters. They're too busy with things to do to be whiners longing for a day long past and a glory long faded.

True. When the FCC conducted their recent field tests, they found that
most amateurs could reduce their power by 10 db or more and still carry
on their contacts with little noticable degradation. Though of course
there are notable exceptions to that.

>than a watt. It's done all the time.

Yeah, but much of the credit for that belongs at the other end. It takes
no special or different skill to key a milliwatt than it does to key a
kilowatt. The skill is at the other end trying to dig that weak signal

out of the crowd, even when the station at the other end is running a kilowatt and making *your* job easy. IMHO the awards and credit should go to the guys working the milliwatters, not to the guys running milliwatts.

In that regard I really like things like the AMSAT ZRO tests. They give the credit where it belongs, to those stations able to dig out the very weakest signals, and not to the guys generating the very weakest signals.

>much has changed since then. Hopefully the test still deals with
>vacuum tube circuitry (I'm guessing that there's still a lot of
>equipment out there which is using tubes).

There isn't much about vacuum tubes on current tests, but some of
your knowledge about tubes will translate fairly well to questions
about FETs. Bipolar current driven circuits, digital logic, PLLs,
DDS, and the like may confuse you a bit however.

>Should looking over my notes from back then, and learning Morse Code,
>be sufficient to at least get a passing score? From what I gather by
>reading messages in this newsgroup, there's more than one type of FCC
>test to take - how do the tests differ?

Get the new study guides. Nearly half of the exam is about
regulations, and those have changed significantly. Most of the
technical questions don't focus on individual active circuits.
Most deal with systemic responses which require a different level
of knowledge. Much of what you know will apply, but some new skills
are needed too.

The default entry license is now Tech (everything above 30 MHz),
which requires no Morse speed testing, so you can get an amateur
license without wetware conditioning. But for HF operation you
still need to pass a code speed test (for now). There are now
5 levels of exams for HF access, ranging from the old Novice
through Tech+, General, Advanced, and Extra. The first two require
a 5 WPM Morse speed test, the middle two require a 13 WPM Morse
speed test, and the latter requires a 20 WPM Morse speed test.

HF licensing and sub-banding is all rather baroque, but what you
need to know is that Advanced gives the most privileges for the
effort expended. Novice and Tech+ give just a tiny taste of HF,
General gives more (and may be sufficient for your needs), and
Extra doesn't really grant much in the way of extra privileges
above Advanced.

"Yeah, but's" aside, the point was that this is quite an accomplishment and
the Amateur community (particularly newcomers) shouldn't be jaded by all the
hype for the bells-and-whistles Japanese rigs and the myth that high power
(even 100 watts) is required for success on the air. I don't want to get into
a debate over this, but if a QRP station makes it through the QRO pileup,
especially to QSO with relatively rare DX, it takes a bit more skill than
switching on the quad-4CX10,000's.

>>>a 2M radio.
>>

Gary Coffman responds:
>>Ouch. Yes, if bells and whistles are more important than solid
>>communications capabilities, you're going to have to spend a ton
>>on a mobile rig. But if you're more interested in good communications
>>performance, there are alternatives which will work much better than
>>a HT and an amp, while not costing more than the combination of a
>>HT and an amp. The Yaesu FT-8500 is actually a pretty good ham rig,
>>despite the bells and whistles, but a Motorola Mitrek would be better,
>>and cost less than $100 (or a MIcor for $50, or a GE Mastr II for $75).
>>With the change, you could also buy a scanner if you just have to have
that capability.>

"C. Wheeler" <cwheeler@ccnet.com> responds:
>C'mon Gary! The suggestions you have given here are 180 degrees from what
>Stephen is looking for. You think you're helping?

Gary Coffman then re-responds:
:Perhaps, if they make him think about what he really needs.

Gary,
I understood the point you were making about features vs good communications.
Unfortunately, the person who started the original post probably didn't.
Therefor, I have to agree with C. Wheeler. Your suggestions were poor at
best and mis-information at worst. You have a wealth of information to share.
The trick is knowing where and when to share it.

From: Terry Simonds <fsimonds@emi.net>
Message-ID: <Dp37yp.1vv@emi.net>
Source record: 228582

The definition of an ohm (named, by the by, for George Simon Ohm, an early tinkerer) is correct.

If you look at it from a mathematical point of view, it should become clear what happens when you put 100V across a 1-ohm resistance. Ohm's law states

E=IR

where E=voltage (volt)
I=current (ampere)
R=resistance (ohm)

Rearranging:

I=E/R=100/1=100 amperes

As you can see, if you know any two of the variables in the above equation, you can find the third. Chew on this a bit and I think it will become clear.

For example: Hold E constant and vary R will cause I to vary.
If you want to hold I constant while you vary R, you'll
have to vary E as well.
Hold R constant and vary E and I will vary.

Gee, Nate. What HF band were you listening to? One interesting reason to upgrade to HF is to meet people you probably never would have the opportunity to otherwise meet.

I remember the time on RTTY several years back when I carried on a QSO for over an hour with a chap in France. He lived in a castle (he sent pix of it!) and was recently retired from a company that made cognac. We discussed the finer points of making cognac and how he liked living in a drafty old stone pile. How many local contacts would result in that conversation?

Then there was the op living on the east coast of Africa. He told me that he was running on emergency power into a wire strung in the palm trees in the middle of a typhoon. After about ten minutes he suddenly disappeared in mid-sentence. I of course feared the worst until some months later a letter (not a card) arrived explaining what had happened. He was fine, but his house, antenna, and radios were a shambles. Ever heard that on 2m?

One of our best friends was a G4 I met on 20m one afternoon back in the mid-80's. He became a silent key several years ago, but before he died we visited him and his wife in the UK and they have been here several times. Just last summer we spent several days with his widow over there. But, then, of course, you could have hopped in the car to visit a local contact.

I'm not flaming you, Nate. Just don't write HF off as a lost cause. Listen, listen, and then listen some more. There's a lot more out there than "599-QRZ?"

From: wb6w@netcom.com
Message-ID: <wb6wDp47pq.CIJ@netcom.com>
Source record: 228449

Interesting thread. The main point seems to be a complaint about the quality of conversations on HF. Too bad - most of the comments could as well be directed to most conversations in society between people who have just met. On the air (VHF, HF and even CB) people are at least trying to talk. If you want a comparison, take a ride on the bus and see how many people start interesting conversations with people they just met... It happens but not very often.

Topics that were not quite on subject include the CW requirement and nocoders vs. other license classes. The CW requirement is really very straightforward. The US is bound by treaty obligations that require a demonstration of proficiency in morse code for access to the amateur bands below 30MHz. That's it. The only way a change will occur is if the rules get changed. Instead of flogging each other over this subject, we should be flogging those who can do something about it, the FCC, the US state department (which will negotiate any changes to the treaty) and possibly your elected Congress-creatures (assuming they can read). Apart from that, the subject has generated far more heat than light. Let's move on to something useful.

The other item is the perception that folks with the other license classes look down their noses at no-coders. Note that my call says that I am NOT a no coder. In fact, they folks I hang out with on the air are (with but one exception) all extras too. We typically are found on either 2m 9600 baud packet (where we have a radio based conference bridge) or on 220FM (where even a novice is welcome to join us). We have discussed the nocoder issue amongst ourselves and found that when someone shows up on channel, we don't really care what his/her/its licnese class is (as long as it's legal for the band and mode). What we DO care about is that they are honest, friendly and willing to accept us as we are and to be accepted as they are. Yeah, we will encourage anyone who joins with us to upgrade. Enough of us are VEs that we can (and have!) organized exam sessions. That's why we are mostly extras (the one who isn't is advanced).

So where is the prejudice against nocoders comming from? Seems to be mainly nocoders complaining that they aren't allowed to work "skip". Well, there isn't much that we can do about that, except to provide encouragement and exam opportunities - which we do and have done. We will not discriminate against a no-coder simply because he/she/it is a no-coder. However, if they have chosen to discriminate against themselves, there is not much we can do about it, except feel sad.

There is no shortage of heat concerning these subject. There is, however, an appaling shortage of light.

That's a very good point. When I call CQ and a QRP station answers, I'm the one who ends up doing all the work. That's especially true if my amplifier is on, because it seems to encourage replies from stations that are practically buried in the noise.

I'm not big on constests (as if you didn't know), but crediting operators for working a QRP station, in addition to a more moderate credit for being QRP, would seem more logical and equitable all the way around. I'll bet the QRP boys would rack up some pretty big scores with a plan like that, in addition to working more stations!

>Most any idiot can copy a QRO signal

Unless it's QRQ. ;)

Hi Stephan, well said. The ones who get upset are cooperating with the upsetting one by using freedom of choice to choose to get upset. Assume exactly the same word meanings but in a language one doesn't understand. No upset there. "Sticks and stones ..."

The April edition of Ham Radio Online magazine is now available at
http://www.accessone.com/~vbook
or
http://www.accessone.com/~vbook/hronline.htm

This month features original stories on packet radio path quality, spread spectrum
communications, more information on making your own solar observations, getting started in shortwave listening and an amazing list of hidden or not so hidden renditions of Morse code in popular music. We will be adding more stories over the coming weeks - this is a dynamic magazine with upates appearing as often as daily.

As usual, Ham Radio Online also features Amateur radio newsletters from around the world, real-time ionospheric propagation reports, real-time aurora conditions,
real-time MUF calculations, real-time earthquake and severe weather reports and so much more.

Stop and by and enjoy. We are free - and free of ads too - your stories are always
welcome at Ham Radio Online.

Thanks and 73,
Ed and Kim Mitchell,
KF7VY and N7VPL

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z MARCH 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 MARCH AND FORECAST FOR 01 APRIL - 03 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 30 Mar
Daily Proton Fluence >1 MeV: 4.2E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.3E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 Apr 02 Apr 03 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 30 Mar
Learmonth 6 2222 1222
Fredericksburg 6 6
Planetary 8 6

Observed Kp for 30 Mar: 2221 2222

2B. MAGNETIC FORECAST

4499. Ford Products - RFI

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-31 00:00:00 UTC
From: eugene@loop.com
Message-ID: <4jn5au$aed@dobie.loop.com>
Source record: 228457

Problems with electric fuel pumps in Fords is covered in Technical Service Bulletin TSB 95-11-3

Model application: 1985 - Current , most all cars and trucks with fuel injection or electric fuel pumps

This references a noise filter F1PZ-18B925-A

The list price is about $50.00

It appears to be two chokes and capacitors in a sealed unit.

The installation involves removing the fuel tank, to get to the fuel pump in tank. The filter is installed between the pump and the
cover which is locked to seal the tank. Getting the tank out is the worst part of the job. I recommend that the Ford filter be
used since the assembly is submerged in the fuel.

anyway it works very well.

De E. Joe Orrico WB6HRO

4500. Ohio/Penn DX Bulletin #249

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-31 00:00:00 UTC

SB DX @ ALLBBS $OPDX.249
Ohio/Penn DX Bulletin No. 249

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 249
BID: $OPDX.249
April 1, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1LJA, K4CEF, KF8VW, DF4RD, DL7VOA, DL9GOA & DX News Letter, EA4BT, F8RU, G3NYY, G4BUE & DX News Sheet, PAGBQ and VE9AA for the following DX information.

3C, EQUATORIAL GUINEA. Teo, 3C1DX, has been active this past week from the city of Bata. He was passing out contacts mainly on 20 and 40 meters CW, but was also heard on 14195 kHz at 1950z. QSL via EA6BH, Mateo Campomar Munar, Reina M Mompeller 74 B, 07007 Palma Mallorca, Spain

4U1SCO. If you had a chance to work the UNESCO Paris Headquarters over the past weekend, the QSL information is via F5SNJ. Another operation will take place in October. The license has been issued by U.N. Telecommunications Office in New York.

9G5BQ QSL CARDS. Steve, PA3GBQ, reports that the full color cards of the 9G5BQ holiday/operation in January 1996, are ready from the printer. Every direct card received will be sent out this week. "Sorry for the delay", Steve, 9G5BQ operator, PA3GBQ.

9H, MALTA. Win, DK9IP, who was active as 9H0DX during the CQWW WPX SSB Contest during this past weekend, will continue to be active as 9H3WK until April 4.

C56CW and C56DX, WRAP-UP (The Gambia). DL2RUM, DL7BO, DL7DF, DL7UFR and DL7URH would like to thank everyone for all contacts that were made March 5-18th. Their QTH was Kololi/Serekunda near Banjul (capital city). They were mostly active with 2 separate stations making a total of 29313 QSOs. QSL information for C56CW and C56DX (only for this operation) is via DL7DF (ex DL7UUO), Sigi Presch, Wilhelmsmuehlenweg 123, 12621 Berlin, Germany.

CY0, SABLE ISLAND. Just a quick update on the CY0AA DXpedition. The team is possibly planning to be active for 7-10 days somewhere between June 18th and July 2nd. More sponsors have been added: Cushcraft, SMIRK,

Battlecreek, SM7AED and ARNE. Activity will be on 160-2 meters SSB/CW/RTTY with one station placing its emphasis on 6 meters.

FO, FRENCH POLYNESIA. The DX News Sheet reports a group of VK and other operators will be active in April as FO0OM/P from Dundas Reef.

FT5, CROZET. FT5WF continues to be active and was reported one morning on 14226.5 at 1255z (NO net) with very few takers. He had a S5 signal on the longpath. W5HVV reports working him easily with 100 watts. QSL via F5IZK.

GD, ISLE OF MAN. Be looking for Rick, AI5P, who should be active now and until April 25th as GD0/AI5P. QSL to home call.

J3, GRENADA. Joe, WB8GEX, will be active as J3K from April 5-12th. Activity will be on 160-10 meters. QSL to: Joe Pater, 1894 Old Oxford Rd, Hamilton, Ohio 45013

OOPS DEPARTMENT (The fingers were faster than the brain on this one!) The QSL route for 5R8EN that was printed in last weeks' OPDX Bulletin #248 was incorrect. The correct QSL manager for 5R8EN and 5R8EN/P is F6AJA (not F6ARA as reported).

PY0F, FERNANDO DE NORONHA. PY5GU/PY0F was active last weekend during the WPX contest, but will continue to be active until the first part of this week. Check around 14223 kHz around 2130z. QSL via home call.

S0, WESTERN SAHARA. Remember to look for S020R this week between April 3-7th, on 160-6 meters CW/SSB/RTTY with 3 stations running 24 hours a day. The operators are F6EXV, F2XV, EA2KL, EA2JG, EA2BSJ, EA2AM, EA2CNU, EA2CLS, EA2BP, EA2CZM, EA3ELM and EA3GBU. All QSLs via EA2JG, Arseli Echeguren B., Las Vegas 81, 01479 Luyando, Alava, Spain.

VP9, BERMUDA. Paul, N1LJA, of the Connecticut DX Association, will be operating from IOTA NA-005 as N1LJA/VP9 from approximately June 9-15th. He will be operating only 100 watts to a "Vertical Windom Antenna" on 40-10 meters SSB. Suggested frequencies: 7260, 14260, 18160, 21360, 24960 and 28460 kHz with allowances for propagation and QRM. Please QSL to his home call.
Also look for Jay, K4ZLE, who will be active April 7-14th as VP9/K4ZLE operating mostly CW and some RTTY with a TS-50 and G5RV.

WHERE IS PETER? Peter Casier, ON6TT, reports he has just returned home (from 5X-land) and is on leave for 14 days. He indicates that he has not been on the air from 5X-land yet because his cargo was delayed for 2 months, and his license application has not been approved yet. Peter expects that his license should arrive upon his return to Uganda. He states that he misses being on HF, but he has found and rented a great location to operate from once he is able to be on the air. After his return to Uganda, he will be traveling in the region, and hopes to be a guest operator from 5Z, 5H and 9U. Peter has an E-mail address in Uganda and it is: wfp@starcom.co.ug

ZD7, ST. HELENA ISLAND (and maybe ZD8 also!). Andy, G4ZVJ, is now signing ZD7VJ and will be active from now until April 12th. His operations will be CW only on 1827.5, 3503, 7003, 10107, 14027, 18077, 21027, 24897 and 28027 kHz (+/- QRM) listening up. There is a possibility of activity from Ascension Island from April 16-23rd with Andy signing as ZD8VJ. QSL via G4ZVJ (NEW ADDRESS!), Andy Chadwick, 5 Thorpe Chase, Ripon, North Yorkshire, HG4 1UA, England.

ZD8, ASCENSION ISLAND. Just a reminder, that Jim, N6TJ, will be active again as ZD8Z from April 16-24th. Activity will be on the usual DX frequencies but especially on 14160 kHz (2000z) and 21250 kHz (1900z). QSL via VE3HO.

* SPECIAL NOTE FROM EDITOR: There will be no bulletin next week (April 8th). I will be spending the holiday with family instead of writing Sunday morning. Please keep sending your DX information. If a special announcement takes place, I will still distribute the information through the OPDX Mailing List.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Update on Microwave Bugging Devices - 3/28/96

0.902 - 0.928 ghz - Popular Commercial FH/DS Devices
1.710 - 1.755 ghz - DEA Audio/Video Bugs (over 1400 bugs purchased in 1995)
1.710 - 1.755 ghz - DOJ Audio/Video Bugs (.25 to .50 watts)
1.710 - 1.850 ghz - Treasury Video Surveillance Systems
2.400 - 2.484 ghz - Popular Commercial FH/DS Devices
4.635 - 4.660 ghz - Treasury Video Surveillance Systems

Most recently purchased gvt microwave surveillance gear seems to be running between 900mhz to 5ghz, with a few systems operating on the 7/8 ghz bands.

Also, keep in mind that the pros love to use ultra low power devices which use the power lines as the transmission medium/antenna (9khz to 300 mhz). Devices typically operate below 10mw, often below 1mw. The devices typically use Wide FM and use voice inversion encryption... VERY easy to demodulate.

Note: According to a recently obtained DOJ surveillance training manual:

�The typical range for the 28 ghz devices is six miles, the typical range of the 2.4 ghz is thirty miles, and the typical range for the 1.7ghz is 44 miles.�

�... frequency modulated applications should operate below 3 ghz to take advantage of the favorable frequency propagation characteristics of that part of the spectrum.�

�...Frequency Hopping and Direct Sequence Devices spead spectrum devices should operate above 1.5 ghz, this will prevent the emissions from being detected by electronic countermeasures.�

4505. Re: FT-530 mod

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-31 00:00:00 UTC
From: keeton@acm.cs.umr.edu
Message-ID: <4jkqik$fr@hptemp1.cc.umr.edu>
Source record: 228463

Ben... I have had my 530 for about one month now... I did the mod where
you cut the green wire... I have extended Rx on VFH but thats it... No
Extended Rx/Tx on UFh (I even changed the band limits..)
The mod worked great the day that I did it.. But the next day it didn't work.
Get that?? I can figure it out... Nobody else can figure it out either...
I undid it by connecting the green wires back up... reset the radio...
disconnected them.. w/ the radio it had extended Tx/Rx on both Uhf/Vfh..
But when I closed the radio back up the quit working.. That part
really confused me!!

Good luck... if you want more info from me or a copy of the mod I did...
email me.. keeton@acm.cs.umr.edu..
Enjoy..

/john

CrACKeD <cracked@primenet.com> wrote:

+GDB:
+GDB:> None of you have tried very hard. I have used HF a lot to practice my
+GDB:> Spanish. It seems to me that I have pointed out at least one very
+GDB:> useful thing on hf.
+GDB:
+GDB:Hmm, how to you manage to get the pronunciation down using beeps?
+GDB:Spanish vowel sounds are quite different than English vowel sounds, so
+GDB:if you have learned Spanish by means of CW, then you are speaking
+GDB:Spanglish.
+GDB:

Nobody said anything about CW I am talking about SSB here. The
pronunciation is fine gracias.

+GDB:> There has been a lot of useful health and welfare traffic on HF.
+GDB:
+GDB:Like during earthquakes and similar disasters? Of course, but I
+GDB:wouldn't classify CW as a productive or enjoyable leisure activity.
+GDB:It can be important in severe conditions as a means of emergency
+GDB:communications, but I can't see why so many hams spend so much time using
+GDB:it in their spare time. Yuck.
+GDB:
+GDB:> If you are finding nothing it is because you don't try or don't
+GDB:> want to or are just rationalizing you inability to get a license for HF.
+GDB:

+GDB:None of the aboce my friend. I have tried, and I wasn't impressed. I am
+GDB:also completely able to get my licese for HF, as I will be getting it as
+GDB:soon as I'm not so busy with school.
+GDB:

You may be able to but most of the complainers can't, they cry about
the CW requirement. Although I enjoy CW I agree that it is totally
unneeded. I would not mind at all if the requirement for CW were
dropped as part of the requirements to get on HF. My contention is
that there is a lot to be found on HF.

4511. Re: ARRL insurance

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-31 00:00:00 UTC
From: flanders@znet.groupz.net
Message-ID: <4jklts$j51@news1.sunbelt.net>
Source record: 228521
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Anybody contemplating insurance on their ham gear should first ask
their Homeowner's Insurance agent if they are already covered. I am
already covered on everything in the house, at no additional cost.
Lightning took out a couple of thousand dollars worth of ham gear here
a few years ago. Allstate repaired the pieces not completely fried,
and purchased new stuff for the rest, with no depreciation (all were
current models). I only paid my deductible.

I think additional insurance might be wise for mobile rigs, but even
there, I would consult the car's insurance agent first - might be
possible to get an inexpensive rider with specific coverage for mobile
rig also.

We should remember one very important thing about insurance: ON
AVERAGE, WE GET BACK LESS THAN WE PUT IN.

Don't buy more than you actually need.

>The problem with that reasoning is that, as with the CDA, Congress
>can *mandate* an action from the FCC. Then the public comment on
>rulemaking is moot.

That is always a possibility, but it changes the dynamics of the issue
in a very considerable way. The concern no longer is that the FCC
is a threat to the Internet, but rather that congress may attempt
to use the FCC as a means to close down the borders. That's
certainly not what this thread has been discussing. Additionally,
the congress would likely involve hearings of some type to
discuss feasability, etc.

>They'd *have* to impose the regulation whether
>the public likes it or not, or whether it is practical or not (see
>ECPA).

Yes, that's true, just like the ECPA...and we have really seen
how the FCC enforces the ECPA.

>Of course that leaves the avenue of the courts, but unless
>Congress did something provably unconsititutional in drawing the law,
>there's little the courts can or will do. As example of that, see
>certain Customs regulations. The courts give the government wide
>latitude in what they can do at the border.

Well, I'll worry more after I see the outcome of the CDA case first.

4513. RTTY on the WARC bands

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-31 00:00:00 UTC
From: algollom@interlog.com
Message-ID: <4jklql$gps@steel.interlog.com>
Source record: 228523

As one who has recently discovered the joys of RTTY, I've
been scouting the various bands for activity in that mode.
I've discovered a fair bit on 80, 40 and 20 (the open bands
these days), but next to nothing on the 30 and 17 meter
WARC bands.

Now I realize that the WARC bands probably don't appeal to
those whose primary interest is contesting. I also guess that
there may be a reluctance by some with limited space who want
to optomize what space they have for antennas for the bands
"where the action is".

This is certainly not to say the WARC bands are dead. Far
from it. There is a fair bit of activity on phone, cw,
packet and the TOR modes, but as I said, little if any on
RTTY.

There's nice open space there just waiting to be filled.
You might be pleasantly surprised by the propagation on
these bands and what you can do with just 50 - 100 watts
and a simple dipole - especially now during the low end
of the solar cycle.

So how about giving it a try, RTTY enthusiasts. Break away
from the crowds and try something new and a little different -
RTTY on the WARC bands.

Hope to see you there.

73...Alan VE3XAG

RCA WT-100A and/or Hickok 700 tube tester wanted. Seeking unit in good running condition, needing some repairs or for parts (if I later come across a working unit). Willing to swap for something or please state a fair price for the respective unit. I would prefer swapping something as cash is tight, but I would have to find out what you are looking for -- I may have it. Please indicate if you have manuals, schematics, charts and/or plug-in tube sockets for the respective tube tester.

Kindly, email with details.

Thank you.

Foxhunting championships

CHAMPIONSHIP FOXHUNTS IN AUSTRALIA

The IARU Region 3 Amateur Radio Direction Finding (ARDF) championships will be held in Townsville, from 15-20 July. Separate contests on separate days will be staged on two metres and ten metres. Each will be an all-on-foot event with five foxes on a multi-kilometre course under IARU rules. Hunters from Australia, Japan, China, Korea, New Zealand, Bulgaria, and Kazakh will be competing, and perhaps from other countries, too.

-- Joe Moell K0OV (E-mail: Homingin@aol.com)

WICEN News
WICEN News

The various WICEN exercises last weekend, all competing for personnel, are now over. Peter Carter VK2ETK, the organiser of the NSW Long Course Championship Triathlon wants to thank all 32 personnel attending; they came from Orange, Bathurst, Mudgee, Cowra, Young, Forbes, Parkes and Sydney. Similarly, Dave VK2KFU would like to thank all those who made the Bungonia Cave Rescue exercise yet another success. Dave advises that due to heavy concentrations of carbon dioxide gas (the dreaded "CO2", which almost resulted in an "authentic"), the exercise will move to another month next year, probably October; don't worry -- he has made the Cave Rescue organisers aware of the other events that month.

Events this month include the closing date for Senior Rescue Instructors' Conference on Friday; the VRA Mid-year Conference at Inverell next weekend; the RCOs' Conference at Hornsby RSL Club next Sunday; and the end of the financial year, with subscriptions due (a mere $10), also next Sunday.

Next month sees the Mid North Coast Horse Enduro on the weekend of 6-7th April, the Forster Triathlon on 20th-21st April, and the RTA Big Bike Ride, from Albury to Bathurst, from the 20th to the 28th April.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each

Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup
Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the March issues of the various magazines, all of which turned up on time, but unfortunately your reviewer was somewhat busy.

"Electronics Australia" investigates the dark art of aligning professional video monitors; the application of the new EMC regulations, as applied to kit construction, is reviewed; a service-woman makes an appearance for the first time in history; an inexpensive but flexible car computer is built; we note that certain "2000-channel VHF hand-helds" are still being advertised by a prominent retailer, with no mention of an Amateur licence being required; the mysteries of thermionic diode detectors are explained; a multi-sound siren is constructed; and those still using primitive operating systems upon their computers will find the article on "viruses" of interest.

"Silicon Chip" starts explaining the principle of oscilloscopes (did you know that what would be regarded as "low voltage" can actually sit at several thousand volts BELOW ground, and hence is lethal?); a zener diode tester, that includes high-voltage diodes, is built; an automatic ALC for PA systems is constructed; the long-awaited second part of the multi-channel RC transmitter is presented; and a dead-simple battery tester, based on those strips inside battery packs, is assembled.

"Amateur Radio" wonders why Amateurs were not allowed to use the "VI" prefix upon Australia Day (yet some car race was granted it); the ins and outs of using FM on the HF bands are discussed (it appears that many people are breaking the law, including one pioneer using FM on 80m!); a CB "Stationmaster" antenna discovers a better life; the trials and tribulations of cheap "RF" connectors are discussed, along with a novel method of decoding ACS transmissions; a simple ATU for 80m and 40m is presented; the history of HF direction-finding is discussed; a gum tree is loaded up on 40m with good results; those into fox-hunts will find plenty to interest them; a series on wire antennas is started; the packet radio column returns; the FM-828E is tuned to 6m; and some of the sillier SMA practices are highlighted.

"Radio and Communications" concentrates upon the Internet; some of the weirder stations heard on HF are mentioned; some helicopter history is discussed; the "critically coupled" antenna is continued; the general coverage HF receiver project is concluded; and since your scribe received several duplicated pages in his issue at the expense of others, this was all that could be reviewed.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News Briefs
NEWS BRIEFS

Xenotech Australia Ltd., in cooperation with the Centre for Marine Science and Technology at Curtin University in Perth, Western Australia, has developed a 3D television system, which it has demonstrated at the CeBit '96 trade fair in Hanover. In Korea, consumer electronics giant Samsung has licensed the technology for use in 3D video games.

Two significant advantages of the system are that the viewer doesn't need to wear special glasses to view the image, and that viewers with conventional television sets can still view the images, though only in two dimensions. The 3D receiver is fitted with a tiny camera and software to track the viewer's eyes and adjust the picture accordingly.

Xenotech's magaing driector suggested that the 3D-TV would be commercially available in three to four years.

Comet Hyakutake paid a rare visit to our skies this week, appearing over the eastern to northeastern horizon just after midnight, as it heads towards the sun. Tonight might be your last chance to see it until it passes by on the outward leg some time in May, hopefully with a more visible tail. If you miss it then, you'll have to wait another 10 or 20 thousand years for its next appearance. Look for it just over the north-east horizon after midnight tonight.

Japanese explorer Kenichi Horie has begun a four month long solo voyage between Ecuador and Japan, using a boat made from recycled beer cans and powered only by sunshine. His 16,000 km trip across the Pacific will take him through the famous Galapagos Archipelago, Oahu in the Hawaiian Islands and finally to Tokyo.

Horie's aluminium boat was made from 27,000 recycled beer cans, and the 12 square metres of solar cells will generate the 1.5 kilowatts of power. The aim of his voyage is to strengthen ties between Jpan and Ecuador, and to increase world awareness of the need to protect the environment.

--Thanks to the Sydney Morning Herald and the Australian

SAREX Update

SHUTTLE AMATEUR RADIO EXPERIMENT (SAREX) UPDATE

Mission managers at the NASA Kennedy Space Center announced Friday, 22 March at 0813 UTC as the official launch date for the Space Shuttle Atlantis, and mission STS-76. The mission marks the third time the shuttle will dock with the Russian Mir Space Station. The astronauts are also planning to conduct Amateur Radio activities as part of the Shuttle Amateur Radio EXperiment (SAREX). Five student groups have been selected to make scheduled radio contacts with the crew. The shuttle will also carry a SPACEHAB laboratory, providing the astronauts with a working environment to conduct microgravity research and development, and to help resupply Mir.

The astronauts may find time to make contacts with the amateur community and their own families. All of the contacts will be 2-meter FM voice, using the shuttle's VHF Mir-docking radio. Frequencies, call signs and general operating information can be obtained from the new ARRL SAREX World Wide Web site www.arrl.org/sarex/

--ARRL Educational Activities Department, via VK1DSN

For the latest tracking and frequency data, connect to the SAREX World Wide Web page, via the VK2 Divisional Web page "links" section.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Tamworth

Tamworth Radio Club holds its meetings on the first Friday of each month commencing at seven thirty pm in thje soccer rooms, Jewery Street, Tamworth for the month of April only. The meeting wil be held on the second Friday which is Friday the 12th April. Visitors are most welcome. If you require directions to the meeting, then just call on the local repeater VK2RTM on frequency 146.750 MegaHertz.

The club intends holding exams on Saturday 27th April. If you wish to sit for any exams please contact David VK2ICY or Sharon VK2SHA on 067 622466 work or 067 691539 home. Please use these phone numbers if you need any information on club or exams.

Important dates to note are as follows:
Sunday 24th (that's this afternoon) is the committee meeting and will commence at 4pm.
Friday 29th March is the President's birthday.
Friday 12th April is the ordinary club meeting.
Saturday 27th April is the examination date.

Sharon Margery VK2SHA
Publicity Officer

Club news: AATC

The next meeting of the A.A.T.C. Inc. will be held as usual on the 2nd Sunday of the month at 109 Wigram St. Parramatta 1.00 pm.

Special notice to all AATC members

The repeater at the moment is down and hopefully back on line during this weekend.

Mark VK2XOF will hopefully be installing the new CPU controlled repeater unit. Stay tuned for further results on 1250 MHz.

For more information about ATV, contact Bob the Publicity Officer on (02) 587-3491 during normal civilised times.

A.A.T.C. Inc. Publicity Officer Bob Barnes

Sounds like the synthesizer is out of lock. Did someone modify the unit for "out of band" if so they may have tried to tune the VCO for another freq range. Try the unit on different parts of the band to see if it works. Try simplex, If it will work at all you have a chance to reset the VCO. A VCO adjustment generally requires you to set the radio to a specific frequency and adjust the coil for a specific VCO voltage, reset to another freq and verify or reset the voltage again. Sometimes these small radios' VCO's go out of lock due to poor mechanical assembly, loose hardware, or poor grounding. Good luck.

In my opinion, this brown nosing is pointless.

First of all, If you consider Ham radio, in particular, contesting, as a sport, as well as hobby then some interesting analogies can be made. CW will still be used for the die hards and contesters. CW will remain a favourite of contesters on all bands for many years with it's 14db advantage over voice.

What the pro-CW people seem to forget is that ham has a contribution to make, code or no-code. I am G7VFY, a UK, radio ham with no CW, and therefore, a 'B' licensee with no access to the HF amateur bands.

However, I do have an HF rig, for us with my transverter and world wide communication IS NOT A PROBLEM with these modes. IT IS, IN MY OPINION, THAT 90% OF ALL THE ACHIEVEMENTS AND NEW DEVELOPMENTS IN AMATEUR RADIO ARE BEING DONE 50MHz AND ABOVE, OR, MORE LIKELY 1.2GHz AND ABOVE.

Chatting to someone on ssb or cw on the other side of the planet on HF requires minimal skills. This is simply not the case with VHF/UHF/SHF.

Hams doing Meteor scatter or moon bounce with 1000wpm CW is a considable achievement, performed by SKILLED AND DEDICATED enthusiasts who, for the most, have left HF as there is no challenge to it!

I would consider using a 150 year method of communication like a Morse Code merely a method of preserving a private club. I does not make you a better ham,

Perhaps there should be exams for Packet radio, SlowscanTV, RTTY, AMTOR, FastscanTV, Meteor scatter and E-M-E/moon bounce?

After all morse is only a manual skill, akin to juggling or card play?!

I will not cry with the passing of CW. This progress is why we don't use semaphore or spark-gap transmitters.

Hail the new age.....

Regards

Steve

Sounds like you have a grounding problem...you have too much RF flying around.

1. Make sure you equipment is WELL earthed.
2. Make sure RF is not getting into your mains/power supply.
3. Make sure your antenna is fitted with some kind of balun so that it's the antenna that does the radiating and not your feed cable.

>switching on the quad-4CX10,000's.

I don't disagree with you, Tony. QRP is fine, and it *works* quite
well in many cases. As I noted in an earlier part of my response,
the FCC's field tests showed that many amateur HF contacts could be
completed with at least 10 db less power than is normally used without
switching modes and without significant degradation. Even greater
reductions in transmitted power can often be done and still be copied
at the other end, especially if a switch to a more effective weak signal
mode is made.

The recent HF beacon tests by a Pennsylvania amateur showed again that signals as weak as 200 uW are detectable in at least the first skip zone, IE I heard them in Georgia. This is a graphic demonstration of how little power is needed to generate a detectable signal over signifcant distances. But I'd remark that the power level was low enough to be uncomfortable CW copy with even a very good receiver with very good filters. A switch to an even more effective weak signal technique would likely have made for comfortable copy, IE Clover or Pactor often still work when the signal is uncopyable by ear (but that's not important to my basic point here).

And, as I noted in the first response, AMSAT's ZRO test is another graphic example that very weak signals are detectable, especially from space, and especially via VHF/UHF. But the ZRO test highlights something else important, and that is that it is at the *receiving* end where the better equipment and better operating skills make the difference at extreme QRP in a given mode.

I think this latter point is far too often overlooked. For effective QRP operation, it is at the distant end where most of the skill and equipment factors come into dramatic play. The old amateur axiom is that "you can't work them if you can't hear them", and the converse is true as well, IE you can't work them if they can't hear *you*. When you transmit at low power levels, the onus falls on the operator, and his equipment, at the *other end* to dig you out of the noise and QRM. It is *his* skill and *his* equipment that makes the contact possible.

We seem to give inordinate credit to the operator *transmitting* QRP, but seem to ignore the operator *receiving* QRP. I think it would be helpful if this were reversed. If contests and Dx standings awarded greater emphasis to those capable of *receiving* QRP, rather than those *transmitting* QRP, the skill sets and equipment factors that are of real merit would be encouraged to a greater extent than is the current case.

To give a concrete example of this, suppose that instead of giving a multiplier to stations running low power on Field Day, a multiplier were given to stations *working* stations running low power. This would certainly encourage better operating practices, better receiving skills, and better receiving equipment than the current system. And of course this would benefit the QRP operator as well because he would become a sought after contact.

It has never been my intent to discourage QRP operation. I'm all for it because I think it encourages improved receiving skills and improved receiving equipment *for other operators*, and those are very good things. I just think that those skills *at the other end* often seem to be ignored in disscussions of QRP. We concentrate on the low power transmitter, and ignore the much more important weak signal receiver and its operator.

This is where disparagement of shiny Japanese equipment misses the
mark. It is not the more powerful transmitter that makes the difference,
it is the better receiver that makes the difference. Most any idiot
can copy a QRO signal, even with crude equipment, but it takes a
better operator, and often better equipment, to copy the QRP signal
regardless of whether that operator is himself transmitting QRP.

Derrick I recommend LOGic 4 for logging software, I have been
using it for 4 years now and have no need to look any further
for others. Look in QST or CQ for there ad. Personal
Database Applications they also have a page and I think URL
is www.hosenose.com/pda. If this is not right let me know and
I'll get the right one for you. Maybe there ad will have it.

>Tim, ka8ddz

I'd ask both of you to think back carefully to the moment you first discovered amateur radio. How was it first brought to your attention that amateur radio in fact existed, and that amateur radio might offer something of value to you? It was probably a magazine article or word of mouth from an existing amateur, and those are both examples of primitive forms of marketing.

To someone who doesn't know amateur radio exists, or confuses it with CB or broadcasting, some method of marketing is required to bring amateur radio into focus for those people if they are to ever start down the road to becoming good amateurs. More effective marketing serves to get the message out more clearly and more widely. If the message presented is obscure or made to appear unattractive, it won't reach most people who might have an interest in amateur radio. Oh, a few might stumble across it anyway, but

that isn't a very effective method of attracting the attention of people who might make fine amateurs if only they knew it existed and what it was about.

Thus good marketing is important to the health and quality of the amateur radio service's future. By default, a lot of people stumble on amateur radio with the impression that it is a high power version of CB, or is a substitute for cellular telephone. So we get people who want to be high power CBers, and people who only want to avoid cellular charges. This is an example of *bad* marketing. Others have the impression that the amateur service is backward, worshipping at the altar of Morse, and of little interest or relevance to the radio pursuits they might like to follow. This too is bad marketing, and it can only be combated by better marketing.

As both of you should know, the amateur service is far more than the stereotypes presented above. But how did you find that out? In many cases, you don't find that out until you've *been* an amateur for a while. That's also bad marketing because it doesn't target its intended audience early, and leads to turning some away who might have made valuable contributions, and attracting some others who will be disappointed (or worse, who will *be disappointing* as amateurs).

Marketing takes several forms. Targeted advertising is part of it, but much of advertising doesn't consist of classic spots and ads, such as those of your local used car dealer. Marketing also involves image and information, product placement, packaging, and yes, product improvements designed to keep the product current and relevant to its target audience. We don't want potential amateurs to make bad "buying" decisions because of faulty perceptions of the product. So we need good marketing to make sure that the "product" is placed well, attractively packaged, and relevant to the target audience. Then we'll get the type of potential amateur we want to at least come into the showroom and kick the tires to see if we have been lying.

That's where another level of marketing kicks in. If the showroom is dirty and disorderly, if the service staff is surly, or if the staff is intent on selling something to the customer he doesn't want, then we've still failed to market the product correctly, and the sale will likely be lost, or we'll have a disgruntled customer who will cause us problems later when he finds out the Yugo we sold him isn't the Mercedes we led him to believe that it was, or the pickup truck that he *really* wanted.

Then why have the topical newsgroups of the Usenet at all? It rather
amazes me that radio amateurs will readily ignore the self-policing
policies of the Usenet and yet think they should have more enforcement
power from the FCC in the amateur context.

Either we understand and respect self-policing, or we don't.

From: MMcanally@gnn.com
Message-ID: <4jmkid$fav@news-e2b.gnn.com>
Source record: 228542

After some checking, I found out that QSL cards cost anywhere from $70.00 to $450.00 per 1000 cards to be printed up. I also found out that you are pretty limited to the color of card, artwork and color of ink to choose from. I have been printing cards for my ham

friends for some time now and I have been encouraged by my friends

to branch out and advertise a little.

I can print 1000 cards with black ink for only $50.00. Why should you order your cards from me? Because $50.00 is it! No shipping charges, no setup charges, no hidden costs. PLUS...you have your choice of 13 card colors, unlimited artwork, and you can have up to FIVE different layouts per order. Want color ink? For example, do you want a red, white and blue US flag on your cards? That would only be $65.00 per 1000, with 13 card colors to choose from,

up to FIVE different layouts, and unlimited artwork in black or colors.

Your card color choices are white, blue, yellow, pink, green, ivory, peach, gray, and the following eyepopping flourescents: yellow, pink, green, blue, and red. Artwork is too numerous to list all designs here, but just some examples would be an ARRL logo, ARES logo, SKYWARN logo, flags of all 50 states, maps of all 50 states, antennas and radios, flags and maps of US territories and foreign countries and 1000's more...
Custom artwork available at NO ADDITIONAL CHARGE!!! Just tell me what you want!!!

Reply via private email for a FREE sample snail mailed to you today!

To place an order call Mark at (904) 626-2450 or FAX (904)626-7686 or you can mail check or money order to:

Hello Lloyd:
Suggestion to get up speed. Listen to the morse character (the code:
for the letter etc) at a faster rate of speed then you would usually:
listen at BUT leave a longer then regular (your comfortable speed):
between each character. In that way you get used to the character:
at say 13 or 20 wpm and to increase your actual speed you reduce the:
space of time between ech character. In other words; send the :
character at a speed of 13 to 20 wpm but use the spacing between:

characters as 5 or 7 wpm. Hope I have not confused you but this:
simple "trick" worked for me after I was told about it;
Good luck Bob WA2EAW

4535. French cluster

Newsgroup: rec.radio.amateur.misc
Date: 1996-03-31 00:00:00 UTC
From: Geoff Brown <equinox@itl.net>
Message-ID: <4jmnu0$3n9@fhbgb1.itl.net>
Source record: 228545

I am looking for information on the French dx cluster.
I understand that there is a dxc in Rouen, but i need the callsign and
nodes to connect up to it from Jersey
Anybody help?
Regards Geoff

4536. Need Heath oscill manual

Newsgroup: rec.radio.amateur.misc

4540. Announcing: GridLoc '96

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-01 00:00:00 UTC
From: Robert Barron <barron@liant.com>
Message-ID: <31600B39.6C2C@liant.com>
Source record: 228400

There will be another run of the new Amateur Radio contest which uses
grid squares and names as exchanges. This contest has a different feel
to it than others, so give it a try!

International HF Grid Location Contest (GridLoc)

I. Announcing
Second annual International HF Grid Location
(GridLoc) contest.

II. Objective
For Amateur Radio operators around the world to
contact other Amateurs in as many Maidenhead grid
squares as possible during the contest period.

III. Contest Period
1200 UTC April 13 to 1200 UTC April 14, 1996
(Second full weekend of April). All entrants may operate a
total of 18 of the contest's 24 hours. Off periods must be
no less than 30 minutes.

IV. Operator Classes
There is only one power class (less than 150 watts).
1. Single Operator, phone only, CW only and mixed
mode. One person performs all operating and logging
functions. Use of spotting nets, DX Alert Packet Systems,
telephone, etc., is not permitted.
2. Multi-Operator, Two Transmitter. Mixed mode.
Only 1 signal per band permitted. Once a transmitter has
made a contact on a given band it may not change to
another band for at least 10 minutes. All transmitters and
receivers must be located within a 500 meter diameter
circle or within the property limits of the station licensee's
address, whichever is lesser. The antennas must be
physically connected by wires to the transmitter.
3. Rover. Mixed mode. One or two operators of a single
station moving between two or more grid squares during
the contest, and making contest contacts, using the same
equipment and antennas at each site. A rover station should
sign "rover" after their callsign for voice and "/R" for CW.

V. Modes
Contacts may be made using CW or SSB.

VI. Bands
All HF bands (160-10 M) excluding the WARC bands
(30, 17, 12 M).

VII. Valid Contacts
A given station may be contacted only once per band
mode from a given grid square. Rover stations may be
worked once per band mode in each grid square they visit.

VIII. Exchange
All stations must transmit a proper Maidenhead grid
square (i.e. EM10) and an operator name. If the
Maidenhead grid square is unknown stations may be
counted for QSO credit only.

IX. QSO Points
Count 1 QSO point for each valid contact made during
the contest.

X. Multiplier Points
Count 1 multiplier point for each Maidenhead grid
square worked per band, not per band mode. Stations not
supplying valid Maidenhead grid squares do not count for
multiplier credit.

XI. Final Score
Total QSO points times the total multipliers equals the
total claimed score for all entrants except rovers. Rover
stations must add the total number of QSO points from
each grid, add the total multipliers from each grid and
multiply these to produce the final score.

XII. Score Submission
Log submissions should be sent within 30 days of the
end of the contest to:
Internet: geoiii@bga.com Mail: GridLoc
P.O. Box 180703
Austin, TX 78718-0703
GridLoc is an Open Log contest and all log submissions
become the property of the GridLoc organizers.

XIII. Awards
To be decided.

Q. Are there any rules changes this year?
A. Yes. This year stations may be worked once per band
mode instead of just once per band. This rule change
aligns GridLoc with other multi-mode contests (like the
IARU HF Championships). For example, mixed mode
stations may work each other on 20M phone and then again
on 20M CW. Both QSO's count for 1 point but any
multiplier credit applies only once.

Q. Why use Grid Squares as multipliers?
A. More common than countries and zones, Grid Squares provide a large number of multipliers which can be worked on each band. This makes the flavor of this contest different from any other since WPX multipliers can not be worked on each band.

Q. How do I determine my Grid Square?
A. There are a number of ways to determine this. Ask other amateurs in your area (especially VHF operators) what the grid square is. If no is knows either consult the ARRL grid square map (which will be useful only if your community is clearly within a grid's boundary) or type in the BASIC computer program available from the ARRL Operating manual. It will determine your grid square based on longitude and latitude.

Q. Why is the contest 24 hours long?
A. To give everyone around the world equal opportunity to operate at peak propagation hours.

Q. Why does it start at 1200UTC (7AM CST)?
A. This start time gives everyone around the world ample time to get home from work on Friday and prepare for the contest the next day. The contest ends before Monday all over the world.

Q. Why limit stations to 150 watts of power?
A. One hundred fifty watts is more than enough to work stations around the world. Higher power would raise QRM levels on the bands and result in complicating the GridLoc rules with the additional categories.

Q. What are the suggested frequencies?
A. There are no suggested frequencies. However it is expected that most activity will be centered around the lower edge of the general sub-bands and the Novice/Tech portions of the 10 meter phone band.

Q. Are there any DX awards for HF Grid contacts?
A. Yes. The Japanese Amateur Radio League offers the Worked All Grid award to Amateurs who work stations in 100 or more Grids. Endorsements are available for multiples of 100 additional grids. For more information write to:
The Japan Amateur Radio League, Inc.
Award Desk
14-2, Sugamo 1-Chome, Toshima-ku,
Tokyo 170, Japan

Q. Why are packet spotting systems not allowed?
A. Packet is not allowed for single operators only. An entry using a packet spotting network would be part of the

multi-two category with "net" as one of the operators.

Q. What is an "Open Log Contest"?
A. An Open Log Contest is a contest in which operating logs submitted for entry to the contest organizers are made available to the public. It is the intention of the GridLoc organizers to make all of the submitted logs available electronically. This allows everyone to study the techniques of the top operators and to analyze logs using common software tools.

Q. Do any logging programs support GridLoc?
A. N6TR's logging program TRLog supports the GridLoc contest starting with version 5.19. W5XD's logging software WriteLog (for Windows) now includes a GridLoc multiplier module.

Q. Will there be any awards?
A. Yes. The organizers will produce awards based on the amount of activity for the contest. At this time it is certain that continental winners in each operating category will receive certificates as will the top ten scorers in each division worldwide. Certificates for the top college clubs are also planned.

Q. Where will the results be published?
A. There are several possibilities being investigated. The organizers hope to have the results published so as to reach the most Amateurs as possible.

>Bill
>N5LMX/DA1WG

I worked for Radio Shack between 1978 and 1980. I quit because I wasn't making any money! What makes you think that anybody with the knowledge and experience to answer questions on computers, stereos, CB and Ham equipment and many other things will work for the measley salary that Radio Shack pays?

People with this kind of knowledge are working at jobs that pay between 40 and 80 thousand dollars a year. The kind of person who lasts at Radio Shack IS A SALES PERSON, NOT AN ELECTRONICS TECHNICIAN!!!

Sales people only make significant mony by selling, not giving advice. I would not trust the advice of any sales person who is working on commission. It is usually BS!!! Radio Shack is a sales oriented establishment, not a laboratory or scientific lab. That is why all the blank stares!!

Now talk to a RS sales person about the difference between spiff commission and regular commission and you will get some good answers!

> PS: I am in MS. and if you need a sked let me know.

I use an FT-990 and my 160 meter dipole fed with 450 ohm twin line for an antenna. I am located in Western Massachusetts. I have good propagation into Europe and often have stations there call me after I complete a QSO. I think one of the lobes on my antenna favors Europe. I am relatively new to the band, but like it. I also have a vertical which in most cases doesn't work as well. Every once in a while there will be a station or probably a direction that the vertical gets better results, but not often.

4545. GPS - ACCURACY

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-01 00:00:00 UTC
From: fanjoy@io.org
Message-ID: <beDYxcGnHkUG085yn@io.org>
Source record: 228405

There have been a couple of posts on Ground Positioning Systems and I have a question.

We are aware that the system was installed for military uses and that the US military "adjusted" some or all satellites to reduce the accuracy to 100 metres or so.

My grapevine tells me that Pres Clinton recently announed this "adjusting" would be stopped and the full accuracy made available to all.

Correct?

Can existing GPS receivers get the increased accuracy or is new/upgraded equipment needed?

>> Tom

>How many times do I have to read messages from hams that send a
>"Thank You" addressed to ALL.

That depends on your news reader. You may be able to prevent
something as specific as that.

>When one seeks help and
>someone takes the time to respond, the least the receiver of
>help can do is send a simple individual reply for thanks.

From the above, I cannot tell that Tom has not done this. Sometimes
when I have posted a question on the 'net (especially if I find out
later that it was a stupid question or easily looked up in Part 97)
the replies start coming in. The tendency is to reply to your own
message with a followup similar to the above. What it sounds like
Tom is saying here is that he doesn't need any more replies, he
has quite enough. It doesn't mean he didn't reply to the ones who
helped him out.

>Would you at your wedding, if you were the groom, get up at the
>end of the reception and yell out, "Gee, Thanks everyone for the
>gifts?"

If everyone by some strange coincidence was giving me the same
toaster again and again, and I wanted politely to stop the flow
of toasters, maybe, NAAH, not even then.

Message-ID: <Dp7BBI.5wy@twisto.eng.hou.compaq.com>
Source record: 228408

I have been using 30 meters ever since I got shed of the HW-100 in favor of the TS-830S. I can't remember exactly when that was, but 12 and 17 were not available yet in the US. It would have been around 1989 or so.

I started out with a Butternut vertical and found it to be lots of fun on 30m. Later when I got rid of the Butternut I switched to 50 ohm dipoles cut for the band. The band is so small that you can cover all of it with very low SWR. Again, loads of fun. Even on low power when this band is open you can use a few watts and a dipole and you are in CW heaven. I use a Vibroplex bug at the house and fall back to a straight key for slow work.

I tried CQ a few times on RTTY, but never got an answer and never heard any other amateur RTTY, though the commercial RTTY is all over the place. I heard the bleeps and blurps of packet at the upper end of the band.

Just this weekend I was on 30 again, this time from my car. I only use a straight key in the car, so I can copy 20-25 but send only 15 or 17. I like to run 60 watts or so from the Yaesu 747 with a bugcatcher on the back end of the car. It's her father's Oldsmobile.

In article <4jnck0$2gf@news.citynet.net>, wm8s@citynet.net says:
>
>Does anyone have a list of the Z-signals (on-line would be nice!) that are
>(were?) used by the military on CW networks where amateurs use Q-signals?
>It's been years since I was active in MARS; are they even still in use?

A few years ago, another set of Z-signals for amateur use was proposed in QST (April 1, I believe). For example:

ZSH - Do you have a hat with your name and callsign on it? / I have a hat with my name and callsign on it.
ZST - Did you see _____ on TV last night? / I saw _____ on TV last night.

I only remember those two; but there was about half a page of them and they were quite funny. Also some abbreviations for sending common rag-chewing phrases on CW were suggested.

Hello Burt,

I infer from your post that you feel gun ownership equates to some sort of phallic substitution. Are you implying that anyone who actually exercises a legal right to own firearms is a male with some sort of inadequacy problem? Maybe your post was just an early april fool troll. My wife, who is a recreational shooter and occasional hunter with me (we eat what we kill, we don't hunt for trophies.) found the phallic inadequacy aspect of your post funny, and wondered if you had any extensive knowledge in this area.

I was going to make a smart-assed remark about how my guns have killed fewer people that cars driven by your state senator, but then I don't really know that you live in MA, or how you feel about the senator. But I'll be at the Dayton Hamvention this year, with my call prominently displayed. I hope you'll take the time to stop and chat about this topic and others. Or maybe I'll meet you on the air.

Regards,

Jim Kempe WQ8R

It might be reasonable if:

Every tubular and electrolytic capacitor in the unit has been replaced with a physically and electrically *identical* NOS part, checked for value, within the last year.

Every resistor has been replaced with a physically and electrically *identical* NOS part, checked for value, within the last year.

All tubes are new, or with less than two months use, and are the original brand, type, and manufacturing date.

The unit is cosmetically perfect and has not been repainted or rechromed.

There are no modifications or alterations whatsoever, inside or out.

It is complete with matching speaker in like-new condition and all original factory literature.

Or ...

The entire receiver is still in the original factory shipping carton and has only been removed for purposes of operational tests prior to this sale.

They made tons of these receivers and they are plentiful on the used market. The specifications are not particularly good and much of the factory wiring looks like the proverbial rat's nest (they can be a real nightmare to service).

On the plus side, the knobs remind me of the '64 'Vette I used to have.

73,
Jack WB3U

PS: If you're not technically inclined and don't have money to burn, maintaining old tube-type gear can present some unique financial problems!

Source record: 228415

Anyone able to provide some typical code test (text) for the EXTRA or a lead as to where to look. Any newsgroups focused on this?

I have a code generator and would prefer to prep using something like the actual test-like transmissions.

Hoping to clar the 20 WPM hurdle so I can get the EXTRA and have a vanity call advantage.

Thanks in advance JR KF8SL

4556. APRS and 50 MHz Propagation

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-01 00:00:00 UTC
From: Andrew Mitchell <amitchel@bconnex.net>
Message-ID: <31606159.6BD1@bconnex.net>
Source record: 228416

I'm interested in hearing from anyone who may be using or is interested in using APRS as a method of monitoring propagation on 50 MHz.

Is there anyone operating APRS on 50 MHz? If so, what frequency are you using?

73,

Andy

Seems funny to reply my own posting.
But It could be a good information for some of you.

I wrote :
>When I connect a speaker (internal or external) then the rig seems
>'hang'.
>Dial knob still work but no button does including mic up/down button.
>The rig works properly if I remove any speaker from the unit. :-(
>I also try using earpiece with high impedance coil, but also can't help.

>From Kevin Karamanos
>First, is your radio modified ?? There are 2 different reset procedures
>for the FT-5200, depending on how the internal jumpers are on in your
>radio. So is your radio stock or Modified ???

>73's

>Kevin

Now I fix the problem.
It's just because I changed one piece of wire inside the Head Unit
labelled wire number 3.
I took it out, leave it open, and work properly, just like that.
Yes, I leave it OPEN !

Thanks guys for supporting me to fix this problem.

-jps

Todate the 800 phone number is not working, good luck.

4561. FS: 220 gear

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-01 00:00:00 UTC
From: "Yves Albert (Al \"Al\") Feder" <w1eox@ix.netcom.com>
Message-ID: <315FF585.6FC2@ix.netcom.com>
Source record: 228421

I'm getting off 220, and am selling these rigs to pay for some
144/440 gear we're putting in here.

HT's:

KENWOOD TH-315A, very little use. With case, small charger, manual.
$225.00 plus shipping.

TEMPO S-2, a veteran, but works great. Thumbwheel freq.selection,
factory installed tone board, telescoping and rubber ducky
antennas, manuals, case. $175.00 plus shipping.

MOBILE RIGS:

Icom 37A, with mike/manual. Used mobile. Works fine except at temps
below 10F (squeals, etc. - a lot of rigs die of fright until car warms
up!!!) $225.00 plus shipping.

Kenwood 321A, tone, mic, manual, etc. used mobile but in excellent
shape. $300.00 plus shipping.

NOTE: This rig goes with the companion 221A for "stacking" for two
meters as well. The 221A is also available TO THE BUYER OF THE 321A
(NOT SEPARATELY!) with the stacking mount, for an additional $200.00.

Kenwood 3530A, toneboard installed, mic, manual, etc. never used mobile.
A really nice 220 rig, more elaborate than the 321A but bigger, so I
used this one in the shack. $325.00 plus shipping.

Most (I think all actually) of the rigs come with factory boxes and
all paperwork.

e-mail replies only pleez.......
Thanks!

G>I'd ask both of you to think back carefully to the moment you first
>discovered amateur radio. How was it first brought to your attention
>that amateur radio in fact existed, and that amateur radio might offer
>something of value to you? It was probably a magazine article or word
>of mouth from an existing amateur, and those are both examples of
>primitive forms of marketing.

If you want to call it that, OK. The thing is that I already had an
interest in all forms of radio (I would even say that I was "born" with
it. No need to market it here...

>Oh, a few might stumble across it anyway, but
>that isn't a very effective method of attracting the attention of people
>who might make fine amateurs if only they knew it existed and what it was
>about.

No, I would venture to say that if you have an interest in Radio in
general, you will find, out of your own initiative radio in all its
forms.

>So we get people who want to be high
>power CBers, and people who only want to avoid cellular charges. This is
>an example of *bad* marketing.

Well, if you are going to "prostitute" the hobby and lower the
requirements (dumbing down) then you have to cater to that element,
right?

>So we need good marketing to make sure that the "product" is placed
>well, attractively packaged, and relevant to the target audience.
>Then we'll get the type of potential amateur we want to at least come
>into the showroom and kick the tires to see if we have been lying.

I disagree for the reasons outlined above.

Walt old boy,

If I do release my individuality onto here then I'll get a stream
of old farts telling me that I ought to do this or I ought to do
that. I'm not that kinda guy. I am shy, quiet and anonymous. That is the
essence of what i am.

comprende?

>What the **** are you on about. The original argument consisted entirely on the pivot that someone replied to my original posting with entirely a different answer to one I was enquiring about. As for you stinking attitude it is very clear that you are one of these old
farts that I referred to - people who are in radio ham and would like to see it retreat back to a state of what
it was during the 2nd world war.

If I am intolerant towards other people its because they come on here pressuring their way of seeing things and their
way of how things should be done like a bloody government.

I don't have a radio yet, I don't even have a thought of professionally taking an exam yet. But if it means having to listen to people from all around the world (y' know - old farts) then I don't want to.

Seems to me you have taken of what I was trying to get across in my original posting and twisted
it entirely using lots of fancy language in the hope I didn't understand.

According to you -

" Amateur Radio is for everyone; young and old, technical and not-so-
> technical, morse and phone and packet, experimenter and rag-chewer."

So why did someone reply back to my original posting saying things should be back like the good old days
then? Seems to me you have to be a stereotype to operate a ham radio? That's what I mean!!

So don't go twisting my words around and making me into things I am not for you must be a so-called bigot too then, won't you?

> Furthermore to my lost posting in answer to the complete
load of **** that the above has written go and read Michael J Woodings posting
three lines above. He says that people come on here and just nit-pick apart
whatever you write. This is another occupation of the so-called farts do.

I'm the original posting I did concerning 'Does the test involve any practical work' I asked just that
and get a one great reply from someone at cambridge who i've replied to via e-mail and got replies but the rest
just seem to have nit-picked it apart saying how things should be returned to the olden days of the second world war. So what?
They say that about everything. From the price of food right down to television programmes and silk stockings. With them everything comes down to
how we should go back to the standards of war-time.

Can't I even ask a decent-basic question without someone coming on and tearing it apart.

We've even got two so-called comedians making a joke of asking
when is a gate not a gate, when its a Bill!

Do you see what I am trying to say toyboat@freenet.edmonton.ab.ca.

Well you're entitled to your opinion - but I won't tolerate you coming on here making all these
accusations you know nothing about and just twisting the meaning around to suit
your own thing. Go back and read every single posting to do with 'Does the test involve any practical work' starting with first one which I posted and read right through them, every single one.

Then if you can still remember or figure out what all the people who have posted things here
are trying to say and if they have any connection to my original posting about the radio test then you're a better man than I.

I suppose now we're going to get someone nit-picking the baove apart.

honestly the mentality of some people. Anything to defend the war.

David

I'm elmering someone to get his technician's license and he eventually would like to upgrade. The problem is, he's suffered brain damage and has had absolutely no luck learning CW, although he learned it for a boy scout badge many years before his injury.

Does anyone know of a way to waive the code requirement in such a case as this? I've been a VE for ten years and have never faced this situation nor heard of regs providing for such a waiver.

Anyone with an answer is invited to e-mail me, though I'm not interested in hearing why this guy should be denied a higher license because of a disability, so hold the flames, please.

Thanks in advance and 73,

Beth Ager, NN9E

Message-ID: <4jngpj$sgf@arl-news-svc-2.compuserve.com>
Source record: 228469

In response to Jim Cummings:
"In less than an honorable fashion" refers to the fact that no scientific poll was ever conducted by ARRL to confirm membership's wishes; the issue had nothing whatsover to do with any government decision. In the Hudson Division, an unofficial (nonbinding) poll was conducted, and the _ARRL_ proposal was defeated. The second question asked in the poll, however, was "do you support the CONCEPT of a no-code license?" The results of that poll was supposedly in the affirmative, depending on how one counted the responses, but the question was bogus.

There's an old adage in politics: when one can't pass a proposal on its own merit, it's passed in CONCEPT. Indeed, the decision to go ahead with no-code was a done deal before the BoD ever "considered" it for passage.

>How many HF rigs do you people think the manufactures could sell without
>CW on them? Without filters?

without filters? who are you kidding? geez, you mean like the Collins KWM-2 (I don't recall the specs on the KWM-380 but i don't think it came with a CW filter option either), the Kenwood TS-520, Yaesu FT-101, Heathkits, etc.

lots of radios appear to be stock factory w/o a CW filter. the CW emission does have a place in station setup, so it's probably harder to leave it out and tick off some folks than it is to just put it in since it's an expected feature.

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of

Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K

message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites (In addition to enabling
the Elmers List to be viewed as hypertext, the site marked with an
asterisk also offers WAIS index searching by keyword):

+ http://www.gonix.com/pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being
promptly updated in particular - the sites at Ohio State and Smart
Pages are no longer recommended for accessing a current copy of
the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Antenen Pascal HB9IIB

AUTHOR, SWISSLOG HAM RADIO LOG PROGRAM

http://www.worldcom.ch/business/swisslog/swisslog.htm

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Tony Reeves AB6GA

tony@toners.com

Prescott, AZ

* Novice training, local VE for Novice-Tech tests
* General questions

I also operate a 24-hour landline BBS for Ham and General Interest:

+1 520 445-8472

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds.stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

(Spinal Tap)
- --

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate

a Link from your page. We're 12,000-strong -- worldwide -- and
growing! Come join us!

Bob Wier

QUARTER CENTURY WIRELESS ASSOCIATION

(see also Jim Walsh)

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing

lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please

indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed.
Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to
listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing
list maintenance. You may address membership requests to
martha@amsat.org, or send them by mail, phone, or fax to AMSAT
headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

AMATEUR RADIO: ELMERS LIST QUICK-SEARCH INDEX BY SUBJECT

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)

* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Humphries (ex-Asst. EC)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)
* Roth (Portland, OR Area Coordinator)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO
(PACTOR)/RADIO TELETYPE (RTTY)

* Brothwell (BARTG Secretary, WWW Page, and Anonymous FTP Archive)
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Sayer (also decoding CHU's ASCII time code)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of
PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and
Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (EMAS Internetworking ASM)

* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)
* Hill (TN TS)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding (Educational Advisor)
* Sefranek (EMAS TA)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

ANTENNAS

* Brewer (wire HF)
* Brubaker (HF)
* Cebik
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Graham (wire HF for apartments)
* Halbert (simple designs)
* Hieber (wire)
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Ihry
* Mouw
* Myers (and transmission lines)
* Ornitz (including computer modelling)
* Reynolds (including HF)
* Rymell
* Salnick
* Salyzyn
* Sefranek (and Transmission Lines)
* Silva
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Bellville
* Brewer (40's-70's)
* Hill (Mailing List)
* Keys (including HF and CW)
* Paperman (Manuals, Service Information, and Literature)

* Standerfer
* Turner (including Kenwood and Ten-Tec)

APPLE MACINTOSH COMPUTER

* Bellville
* Greatorex (including Amateur Radio Software FTP Archive)
* Seney (Macnet, including Anonymous FTP Archive and WWW Page)
* Stader (List of Amateur Radio Software)

BATTERIES

* Myers
* Hammill (Sealed Lead-Acid)
* Sefranek (including Solar Operation)

BRITISH AMATEUR RADIO TELEDATA GROUP (BARTG)

* Brothwell (Secretary, WWW Page, and Anonymous FTP Archive)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Leadmon (WB3FFV)
* Meredith (F6FBB Packet BBS Support)
* Reeves
* Stillinger (IBBS)

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Standerfer

COLLEGE CLUBS

* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Hieber (IG-Funk, Univ. of Erlangen-Nuernberg, Germany)
* Killebrew (Trustee, University of Houston Amateur Radio Club)
* Madsen, et al (Iowa State Elmers)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* DePolo
* Dodell (Mailing List)

* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Bono (AutoCW)
* Elmore
* Hill (learning hints)
* Ihry
* Keys (including CWIST HF CW Net)
* Salyzyn
* Silva
* Stine
* Stockton
* van de Kerk
* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Bloom
* Bruhns
* Edwards
* Gilliver
* Hall (including WWW Page)
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

EQUIPMENT TESTING/TROUBLESHOOTING

* Brewer (Tube Gear)
* Bruhns (Low-Level/Low-Frequency Analog and Transmission Line Measurements)
* Coyle (Kenwood TS-830S and TS-940/AT Service)
* DePolo
* Elmore (Troubleshooting)
* Hare (ARRL Laboratory Manager)
* Ihry (General Electronics)
* Lord (including Radio Doctor's WWW Page)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Rymell (Electronics and Computer Service Work)
* Salnick
* Salyzyn
* Sefranek (including Power Supplies and Amplifiers)
* Seney (Digital Storage Scope FAQ)
* Standerfer (Test Equipment and Measurements)
* Stockton
* Taylor
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Witte (Instrumentation, Test Equipment, and Measurements)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Adams (QRP Rig Standardized Info Sheets)
* Bowen (Supplemental FTP Archives, Internet Callbook Server)
* Cebik (QRP Periodicals, Electronics Books, and Antenna Books Lists)
* Cheeseman (Australia)
* Dodell (rec.radio.info Newsgroup)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hieber (QRP Clubs and QRP-L Mailing List)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Nobody (General)
* Ruh (Amateur Television)
* Seney (Digital Storage Scopes)
* Stader (Macintosh Amateur Radio Software)
* Turvey (United Kingdom)
* Twigger (Amateur Radio Exam Practice WWW Page)
* Williams (Amateur Radio WWW Server)
* Woods (Mail-Order Electronics)
* Yee (Online Repeater Directory)

GEORGIA RADIO AMATEUR PACKET ENTHUSIASTS SOCIETY (GRAPES)

* Coffman (E-mail Contact)
* Merritt (WWW Page)

HANDICAPPED OPERATING

* Gilliver (Blind Issues)
* Madsen, et al
* Tice (Manager, Courage HANDI-HAM System)

HIGH FREQUENCY (HF)/CONTESTING/DX

* Bertolino (425 DX News and IOTA WWW Page)
* Brubaker
* Chilton
* Coyle (including Station Setup for New Hams)
* DePolo
* Elmore (DX'ing, Contesting, and Propagation)
* Gilbert
* Hill (Mobile)
* Kumagai (CQWW Committee Member, JIDX Committee Chairman, Japanese DX Contest Mailserver and Mailing List)
* Madsen, et al
* Nerenberg (DX Mailing List)
* Salnick
* Silva
* Simpson (Best of 75 Net)
* Tidd (DXCC Databases)
* van de Kerk (CW, Low Profile)

* Veres
* Zurn

HOMEBREWING/DO-IT-YOURSELF

* Bruhns (including Low-Level/Low-Frequency Analog, DSP, Surface Mounting, and Transmission Lines)
* Carruth (Digital Design, Software)
* Chilton
* DePolo
* Edwards (including DSP)
* Elmore (Construction Practices)
* Gilliver (DSP, Blind Issues)
* Halbert (QRP)
* Hall (including DSP WWW Page)
* Hill ("Glowbugs" Tube Homebrewing Mailing List)
* Ihry (General Electronics, Towers, Computers and Computer Programming)
* Keys (Junk Box Projects, National Electrical Code for Hams)

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

Chuck Adams K5FO

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online
callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights
into DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest
Group (BBSSIG) is sponsoring a working group to generate and
distribute a series of information bulletins which will serve to
instruct packet radio users in a variety of areas. These bulletins

will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a little bit about day-to-day Unix operations and Unix installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

RELAYER OF AMATEUR RADIO NEWSLINE BULLETINS

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

MAINTAINER OF ADVANCED COMPUTER CONTROLS (ACC) AND LINK MAILING LISTS

The ACC list has approximately 60 members at this time. I am trying to
restrict the list to only ACC users (control people) and owners. The
list is also supported by the new owner of all the rights to ACC, Link
Communications. I am also running the Link repeater controller list
server. It has approximately 90 members at this time.

The way to join the list server is to send me a short E-mail and tell
me what equipment you are using.

(Note: I have no ties to Link Communications or ACC. I started the
Link list first and found how useful it is. I had a lot of requests to

start the ACC list and did it.)

LINK COMMUNICATIONS WORLD-WIDE WEB HOME PAGE:

http://www.link-comm.com/linkcomm/

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

Matthew A. (Matt) D Alessio KC6VIM

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in
SAREX as the project coordinator for our school (The Branson School)
in the STS-64 mission. I will be happy to help anybody else who is
interested in any and all aspects of the SAREX project. I also know a
little bit about UNIX administration, but I find myself asking
questions more often than answering them.

I am a high school senior, so my real area of expertise is getting
young people involved in ham radio. I was a speaker at the Dayton
HamVention Youth Forum, and am active in recruiting in my local
community.

Jeff DePolo WN3A

- -=-=-=-

I am the US National Coordinator for RAIAR, Radio Amateurs International Awards Registry, we have over 78,000 registered members and just over 2,500 general members, plus lifers and charters also.

RAIAR only deals with the VHF/UHF spectrum for its awards, plus SWL on all bands.

I am ready to help any interested individual obtain his Novice or Tech ticket, as well as teach him the ins and outs of VHF Packet.

Our radio club holds classes for those inclined to advance to General and above.

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
~~~~~~

that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@kentrol.synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here,

as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

JPS COMMUNICATIONS, INC.

For those interested, JPS Communications, makers of DSP noise filters and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses of DSP in amateur radio. If you know of some, I'd appreciate hearing about them. There are a lot of people experimenting with new modulation schemes, voice compression, noise reduction, DSP IF techniques, and lots of other interesting applications. I'm planning to add a page with links to this information, so keep an eye out for it, and if you have something to share, please drop me a line.

Lance Halle KC7FVX

lanceh@crl.com

I will be glad to field questions in the following areas:

DFing
Local interference committee chairman

OO questions
Phoenix area Official Observer Coordinator

BSA Merit badge
Advisor of Ham Radio Explorer Post

Just let me know what all you need and I'll do what I can.

News of local enforcement actions and FCC Notices of Apparent Liability (NAL) may be found on the WWW page of the Arizona Repeater Association (of which I am a member):

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable

Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting,

kit building.

Jack G.F. Hill W4PPT

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't
be resolved otherwise.

AMPR.ORG IP COORDINATOR FOR MAINE SUBNET (44.118.XXX.XXX)

I can get just about any answer needed for TCP/IP, if I don't know it myself. I have a close friend who will know the answer (he doesn't have E-mail access).

I am more than glad to offer my assistance. Being up here in the "sticks," I remember how difficult it was to find assistance back when I became interested in Amateur Radio.

[Editor's Note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the

National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

Robert A. Kile KG7D

midnight@accessnv.com

A Current list of Dealers and Manufacturers of Amateur Radio Equipment
in North America is now available on HR Showcase Amateur Radio WWW.

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,

Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST
Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of available
archives are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic
directory.

If you want to access the BBS via Telnet, all you have to do is
access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP
client).

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain
and/or shareware programs, data bfiles, frequency lists, etc., that
would make a useful edition to the QRZ! CDROM. Can help arrange volume
discounts for clubs and groups, and will donate copies of QRZ! to
qualifying non-profit organizations. Send E-mail or call +1 602
483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours
a day. Our connection is via a T1 line so you should get pretty decent
file transfer times.

We've got about 7,000 files online, including radio mods, software,
most everything imaginable. We are also accepting uploads of all ham
radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a
Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Ah, thanks Dana, that seems to explain everything!

I've only ever met one Ramsey kit, a rather nasty 2m receiver with pot and varactor tuned LO that a friend bought as a toy. OK, I don't think the thing was intended to be any sort of tour-de-force, but could easily have been bought by anyone looking for a serious receiver.Unless their other kits are orders of magnitude better than that one, I suppose I must understand why the original poster seemed more than a little irritated.

(I find swearing difficult, I can't even complete "Oh shit!" between realising I'm about to come off a horse and getting all the wind knocked out of me.)

The Free-Space Antenna

Not long ago, I was looking at books and articles written by some of the great Amateur Antenna Gurus (you know the ones I mean), and something stuck in my mind. "An antenna," they said, "is simply a means to match a transmission line to free space." And the better an antenna does this, they say, the more effective it will be. Now that is a profound thought. All our efforts in making an antenna are simply attempts to solve an impedance-matching problem.

This got me thinking. The characteristic impedance of free space is well established as 120*pi, or about 377 ohms. (See, for example, Kraus, _Antennas_, Second Edition, p. 207.) Why couldn't a 377 ohm feedline be constructed and connected directly to free space to eliminate the requirement for an antenna altogether? It sounds too simple to be true, but simple concepts often lead to profound discoveries. Think of the "cross-field antenna" for just one example.

I was shocked to find that no one, not even the big wire and cable manufacturers, make 377 ohm feedline. 300 and 450, yes, but both of these require an antenna to match the feedline impedance to free space, as we well know. And I suddenly saw clearly why coax is so inferior to open-wire line -- its impedance is so far from the required value. All this time, it seemed, we've been so close, at 300 ohms, but not close enough to do away with the antenna altogether. So I had to set out to make my own 377 ohm transmission line.

This turned out to be simple. Armed with a formula from the _ARRL Antenna Book_ (16th Edition, p. 24-16, Eq. 21), I quickly calculated the line's required physical characteristics. Since I don't run much power, I chose #28 wire. The formula shows that the spacing then needs to be 0.15 inch for Z0 = 377 ohms. Using a box of drinking straws and a hot needle, I quickly made insulators and constructed a few feet of 377 ohm transmission line. (For those of you who insist on running more power, you can use #10 wire spaced at 1.18", or, for the smaller "big guns", four inch irrigation pipe spaced 46.5". This can be scaled up as required for the truly "big guns".)

I wasn't sure whether a free-space antenna is "balanced" or "unbalanced", so didn't know whether or not to use a balun. I didn't have one handy anyway, so I just plugged one conductor of the feedline into the center of my rig's output connector and hooked the other to the chassis. The far end I just left open-circuited for the connection to free space. I was so eager to see some results, I forgot all about the 7.54:1 SWR my 50-ohm rig would see. (The SWR on the line itself is 1:1, of course, since the end of the line is terminated by free space in its characteristic impedance of 377

ohms.) Wouldn't you know it, Murphy's Law struck and my transmitter quit just moments after I started testing. But a healthy arc across the feedline before the transmitter died, did confirm that the system was accepting power as predicted.

Since antennas are reciprocal, testing with the receiver is just as good as with a transmitter anyway. I've heard lots of DX with my free-space antenna and can hardly wait to get my transmitter up and running again. The signals seem stronger when I make the feedline longer, so apparently even the free-space antenna works better if it's higher. I'm now working on some phased arrays but haven't been able to find formulas for mutual coupling between free-space "elements" so I have a lot of measuring to do! Preliminary results seem to show at least several S-units of gain, though. (Apparently 0 dBI [dB over Isotropospheric] is a lot of dBi [dB over isotropic].) I haven't been able to analyze the free-space antenna with the computer because the programs don't have a model for free-space elements. I'm working on this, though.

Once again I'm in awe of and deeply indebted to the experts who can always be depended on to provide those profound insights which inevitably lead to great advances in the state of the art. Thank you, thank you!

Say goodbye to lossy antennas and feedline matching problems. Try the free-space antenna today!

Dear Dr. Guru,

I, too, have wondered why I couldn't connect my transmitter directly
to free space and have finally found the answer. The pin-out on free
space is wrong! Once this is corrected, free-space antennas will be
a reality.

A friend <--- (not my real name!)

Great DX Conditions
or
"don't look now but you S-units are showing"

Did anyone else catch the fantastic band opening last night? I could not sleep so I was up late and was tuning around 20 meters when I heard the clock strike midnight. Suddenly the band really came to life with some great DX stuff. First I heard Romeo Germany 8 Uniform really banging in from somewhere in the south Atlantic with a big pile-up on the frequency. I picked a spot and dropped in my call. "Mike India Lima go ahead". "Germany 8 Uniform, you are 70 over 9, QSL info please." "Not to worry India Lima, my card 63% to you via burro." "Aw-Right, got him!" Then Charlie 0 Dog Echo gave me a call on CW running a modified HW-8 at a KW output with a re-worked cash register as a keyboard keyer. Maybe try a little more CW action. Called CQ on CW and answered by BIG CARRIER, weak audio from Victor 0 India Charlie Echo. "Your audio is weak, OM, try turning up the gain." Found out the audio section of his transmitter was not working and he was modulating by screaming at the final tubes.
Swung the beam further south and there was Charlie 0 Alpha X-ray in the Feedline Islands. Gave him a call. "Kilo 5 Mike India Lima you broke my S meter, do not transmit again I am afraid you may blow my rig." "Roger roger Alpha X-Ray, what is QSL info please?" He didn't reply. OK, lets see what's going on in the Pacific. Swing the beam on around. Wow! there is Fox Ocean 0 Lima running 80 over 9! "Fox Ocean 0 Lima this is Kilo 5 Mike India Lima you are 80 over 9, what are you running?" "Ok Mike India Lima, rig here is a converted cordless phone running 1.63 watts using lamp cord feedline to a chicken wire fence." Now this is great! Lets see what is going down on the European front. Swing the ole beam on around past north. Man listen to those signals! Better catch this one. Dropped in my call. "Mike India Lima go ahead." "Roger roger, Germany 0 Tango Charlie Hotel Alpha, you are 62.3 db over S9, Q5 copy. What is my report?" "Mike India Lima, you are minus S8, can only copy on negative voice peaks, try again." "MINUS S8!!, WHADDYAMEAN MINUSE S8? Im running 14 bazillion watts to a 42 1/2 element Thunder Stick at 163.42 feet!! Minus S8 my Aunt Fanny!" Wait a minute, what's that call again? G0TCHA? What's today? Let's see that calendar. Aw rats!

As far as computer programs are concerned, I know of 2: Super Morse &
Morse Academy. I used Super Morse & it worked just fine. As a matter
of fact, I'd still be learning if it wasn't for that program. I
believe most hams should be able to get it for you. I'd highly
recommend it. My wife is presently using Morse Academy & so far she is
quite satisfied with it. The ablsoute best way to learn CW is to spend
a little time every day, say 20 minutes. By doing that, you will not
overload yourself. That's what I did. Also I didn't send any code
unitl I could copy at about 5 wpm.
Also, if you have a tape recorder, try making tapes using a newspaper

acticle: put the tape away for a day & then try copying it. Not only will it test your copying ability, it will also test your own 'fist'. By making a series of these tapes, say one a day, then you will have an ample supply of test material. I did't use that as I found out about it after I recieved my ticket but it sure seems like a great idea.
I originally had some 'code tapes' & as far as I was concerned they were garbage. Alot of fumbling around. The computer program is an outstanding way to learn CW.
If I can do it...anyone can do it & I have been active on CW for about 6 months now. I just can't believe how much fun it is. It sure does take practice though!!
Good Luck

4596. re: ARRL in FAVOR of no-code?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-01 00:00:00 UTC
From: Vincent Biancomano <v.biancomano@ieee.org>
Message-ID: <4jou0g$bg3@zeus.ieee.org>
Source record: 228491

In response to Gary Coffman and Jim Cummings:
"Above 144 MHz" is notational shorthand for "220 MHz and above," as should have been obvious from my latter reference to 220 MHz. The reference was to the BAND, not the frequency.

"A decision that was less than honorable and democratic" had to do with the fact that no scientific poll was ever conducted by ARRL to confirm membership wishes on no-code. There was no mandate from a grass-roots movement at all. The statement on "honorable" had absolutely nothing to do with any government decision making.

The decision to establish a no-code license was a done deal from the start, beginning with former PRB Chief Foosaner's remarks at the ARRL Convention in 1984, and culminating with ARRL's decision to bow before FCC's wishes. Unfortunately, FCC also added insult upon injury in rejecting ARRL's proposal (as proposed), and doing what they wanted. As we now know, FCC had plans for "220 MHz and above," which is the prime reason they rejected ARRL's proposed frequencies. It had nothing whatsoever to do with "finding merit" in anyone's proposal in arriving at the "30 MHz and up" solution. The Commission knew exactly what it wanted to do, and arrived at their conclusion years before the no-code proposal was even officially introduced, starting with Ray Kowalski's efforts in the late 70s/early 80s. All FCC needed was ARRL's acquiescence.

In any case, the bottom line is that, for whatever reasons, the no-code license has never been accepted even for VHF. ARRL clearly knew it was fully extended when it pleaded for amateur support in a QST editorial following the approval of no-code. The VHF no-code license has ultimately become the biggest divisive force between amateurs since Incentive Licensing, and ultimately more lasting because the debate still continues. There is likely to be an even larger gap between those in the Amateur Service when and if a no-code HF license becomes law. Why is that? Because generally, amateurs have come to understand the issue of Morse Code has to do with easing requirements, code and theory, and not with Morse Code's usefulness as a communications tool.

Regards,
Vince, WB2EZG

Stanley Schroeder (RFBG67A@prodigy.com) wrote:
: 2 meter or 440 Mhz?

Without knowing your location, it makes it more difficult to make a call. Some areas have 440, and in some parts of the country it is virtually non-existent. Also, be sure to find out how many of the repeaters are *open* meaning you can use them without belonging to a group.* Here in southern California, there are lots of 440 repeaters, but many are not only closed [membership required] but they are *private* which means they are open only to a certain group.

OTOH, 2 meter repeaters are found virtually everywhere.

If your budget can take the hit, and there *is* 440 activity in your area, then a dual-bander is the answer. My recommendation would be the Yaesu FT-51R.

The Radio Shack HTX-202 and -404 are good units. I got the -202 for my birthday last year, and liked it so much that I bought the -404. They are good value for the buck. Another good point is lower susceptibility to intermod, because only the ham bands are covered. Downsides are size and weight, and the limited number of memories [12].

If I can help further, please feel free to drop some e-mail.

Peter,

The $50 price given for "the fix" is only the part, it does *NOT* include labor.

It's not that hard to drop the gas tank and install yourself, but it can be both hazardous (OF COURSE, you're working around gasoline for heaven's sake!) and time consuming. I've replaced the in-tank fuel pump on several Fords, and found that it takes few special tools (I think the only one I didn't have was a non-sparking brass "drift" to knock the locking ring loose.). You just properly plan (drive the tank as close to empty as you can...) and use common sense (DO NOT SMOKE WHILE WORKING AROUND GASOLINE, etc, etc.).

If ya gotta pay Ford for it, ask in advance for the labor cost! When I checked the price (to see if it was "cost effective" for me to do the work) on two different model cars over several years, the labor rate was "constant", but the time required to do the work was radically different! I was told three hours on one car and six on another! That $55 bucks an hour adds up fast...

>They charge too much! Hamfests, to be really successful should
>be kept to $5 and under so that everyone can come and have a
>good time. How come regular flea markets don't cost anything
>to get in?

The ticket price, in many cases, will depend on the venue. Our club runs a hamfest at the St. Paul Civic Center (usual draw around 5,000). Our prices have been $6.00 in advance/$7.00 at the door. Out of that revenue we pay rent on the facility, salaries for "rent-a-cops", insurance, buy prizes (10 HT's and a big HF rig), travel expenses for speakers (Ham-astronauts, Wayne Green, Carole Perry, to name a few.), publicity, postage, etc., etc.

We usually hope to "break even"! If we have excess revenue, we donate it to amateur-related groups like Handi-Ham, ARRL freq defense fund, FAIRS, etc. We have also sponsored scholarships at a local Technical College.

Although I oppose no-code HF phone privelages, I disagree with the last statement. The motives of the ARRL in this issue may have been unrealistic and ill-conceived, but I believe they were genuine.

Part of this problem stems from the fact that in the early days of radio, ARRL was instrumental in keeping the wolves at bay. However, the wolves are smarter now and better able to manipulate a less-astute political adversary.

If the ARRL wishes to succeed politically, it should surround itself with a team of accomplished liars, able to fend off the advances of their own kind. The ultimate goal in this matter should be to relieve the FCC of control of this spectrum and permanently deed it to the Amateur Service. Otherwise, the uncertainty will never end and resources will continue to be spent at the political front where they benefit no one except the politicians themselves.

You are one of the rare employees that Radio Shack has! You are the
exception, not the rule. Most of the RS employees I have run into don't
know the difference between a fuse and a light bulb. I wish there were
more well informed RS employees so I don't waste my time searching
the shelves.

I will give you an example: Most customers don't remember the stock
numbers of the items they see in the RS catalog, just the description
of the product. I was in Radio Shack on Saturday and over-heard
a customer ask to look at the digital SWR/power meter that RS sells.
The guy behind the counter said, "What's the catalog number?".
The customer didn't know and the sales man said that he would need
to know the catalog number so he could show him the right thing.

Well I guess the RS sales man thought that RS sold two dozen different
models of a digital SWR meter and needed further information!
This typical of what I go through too. Either the sales man was stupid,
not up on the products that RS sells, or just didn't feel like working
and figured he would give the customer a hard time.

Radio Shack claims that the sky is the limit to the amount of money
a sales person can make. All they have to do is sell more. Yeah, right!
Try selling more when you are placed in a RS store in a shopping
center on the other end of town from the mall. When I worked from
6 p.m. to closing, there were nights that not a single person walked
into the store. The district manager did not want to hear that! He still
expected to see a sales increase every month. Pretty hard to do when
the typical customer was from the local neighborhood and comes in
with a silly problem. I sold lots of fuses, batteries, turntable needles,
cable TV jumper cables, and just about anything else that cost under
$5.99. Very rarely did somebody come in for a stereo system, or
some other big ticket item. The people in that neighborhood went to the

mall on a Saturday when they wanted those kind of items. The neighborhood RS store was only to solve their nickel and dime problems and gave them somebody to bitch at for giving blank stares!

We just learned that the Hazel Park Amateur Radio Club didn't make the cut for a flea market space at Dayton this year. In the past we have had a community club table for miscellaneous stuff to sell, and a resting spot for our handicapped and elderly members.

If anyone has one flea market spot that they don't need, we'd be happy to take it and reimburse your costs. Reply via email.

ARLB019 Bill seeks protection

ZCZC AG98
QST de W1AW
ARRL Bulletin 19 ARLB019
From ARRL Headquarters
Newington CT April 2, 1996
To all radio amateurs

SB QST ARL ARLB019
ARLB019 Bill seeks protection

Rep. Bill Baker (R-California) has introduced a bill to protect ham volunteers in the Volunteer Examination program and the Amateur Auxiliary of the FCC from frivolous lawsuits while they are doing their volunteer jobs. The bill, HR 3207, would afford amateurs engaged in statutorily defined activities with the VE program and with the Amateur Auxiliary the same liability as federal workers under the Federal Tort Claims Act. When individuals who fall under such protection are sued for something they have done while performing their duties, the Federal government steps in to protect them. Baker introduced the measure, the Amateur Radio Volunteer Services Act of 1996, March 29, 1996, as an amendment to the Communications Act.

While the bill would not afford absolute blanket immunity, it does offer a fairly rigorous body of legal protection from the kind of malicious litigation that tends to frighten volunteers away from these activities, said ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA.

Baker said that Amateur Radio volunteers provide an invaluable service to all ham radio operators by assisting in licensing and monitoring activities, thus saving taxpayer dollars. Those savings would dry up if volunteers stay away for fear of lawsuits, Baker said in a letter to colleagues. The bill is a simplified version of legislation originally introduced in the 103rd Congress by Rep. Jim Slattery. Individuals and private organizations currently protected by the Federal Tort Claims Act include Volunteers in Service to America (VISTA), the Peace Corps and the Job Corps.

Baker has enlisted members of both parties as original cosponsors of the bill. These include: Charles Wilson (D-TX); Bob Wise (D-WV); Edolphus Townes (D-NY); Mike Parker (R-MS); Toby Roth (R-WI);

Charles Taylor (R-NC); Ron Dellums (D-CA); David Funderburk, K4TPJ, (R-NC); Ed Royce (R-CA); Norman Dicks (D-WA); Vern Ehlers (R-MI); Chris Cox (R-CA); Andrew Jacobs (D-IN); Harold Rogers (R-KY); Dennis Hastert (R-IL); Dave Weldon (R-FL); Anna Eshoo (D-CA); Ken Calvert (R-CA); Doug Bereuter (R-NE); Gene Green (D-TX); George E. Brown (D-CA); Eva Clayton (D-NC); and Sam Farr (D-CA).

ARRL members may want to write their own Congressional Representatives urging them to support HR 3207.

Dear clueless:

Thank you for the new acronym regarding Ham Radio, don't believe I have heard us referred to as AROs before..will have to remember that one. Too bad you tried to MEMORIZE the code, I'll bet it was hard counting all those dits and dahs!
Had you listened long enough, you would have found that our conversations are quite diverse, intelligent and technically oriented.

It is true that some hams do not fix or build their own equipment, partially due to the fact that is often cheaper to simply buy a radio; however, there are many of us who still build and repair our own equipment. There are dishonest people in all walks of life, and ham radio is no exception, but for the most part, you are stereotyping us incorrectly. What makes you think that hams are NOT involved in community work and highway assistance? The advent of the cellular phone has diminished the role that BOTH hams and CBers play in this arena. Times change.

The only one that is a loser here (not a looser) is you. You have certainly lost out on the opportunity to become a respected member of our fraternity. In your case, I feel there is nothing lost in your going back to the chicken band. Have fun working your chicken band clown friends!

At the faster speed there is definitely time enough for some actual conversation to occur within the five minutes, whereas on the slow Morse and moderate Morse tests the focus is on including all the required elements and providing something that sounds like an amateur transmission. As I remember, the (pretend) sender spent a little time describing his equipment and made a little small talk. I remember him mentioning that he had listened to a certain SW broadcast station the night before. This was around 1989.

There are reasons for keeping the requirement as well as for dropping it,
but there is an overwhelming reason not to discuss it here: it is already
being debated on another thread.

4613. Re: Sealed Lead Acid charger control circuit

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-02 00:00:00 UTC
From: mkeitz@bev.net
Message-ID: <4jrmv2$72a@solaris.cc.vt.edu>
Source record: 228358

In article <UnJYxcGDhn/E089yn@frii.com>, bbergman@frii.com (Bob Bergman) says:
>
>
>I recently converted my station to run 100% from a 12v Sealed Gel Cell
>battery and have been looking for a control circuit design to properly
>charge the battery. Has anyone come across such a printed design that
>could be faxed or ordered with the appropriate IC?
>
>I have a 10A-15A, 13.8vdc power supply that is very well
>regulated and filtered for the source.

If you are running 100% of the time from the battery, then you want to use it on "float service". This means the charger simply applies a constant voltage (usually about 13.8V) to the system. The battery will stop accepting current when it is charged. This is the usual mode for stationary backup installations. The more complicated charging schemes have a faster recharge time, but get confused if the battery is connected to a load at the same time. A constant voltage power supply such as the one you already have connected in parallel with the battery and the radios is essentially all you need.

There are several major small points however. First, connect a diode between the output of the power supply and the rest of the system. This will prevent current from flowing backwards into the supply from the battery should the power fail or something go wrong with the supply such as the "crowbar" overvoltage protector acting. You'll need to turn up the voltage (usually an internal adjustment) to overcome the voltage drop of the diode (0.6 to 0.7 V). The diode of course has to be rated for the full output current of the supply, however the peak inverse voltage is only the battery voltage.

Another thing to be concerned about is that the current limiter of most supplies is set to higher than the maximum current rating (15 A in this case). It is intended to protect the supply only from a short circuit or short term overload. Depending on the size of the battery, if it needs heavy charging it may hold the supply in current limit for a long time while it is charging. This will overheat the supply unless you modify the current limiter to permit a maximum current that is more in line with the "continuous" rating (even this may be optimistic in some cases). Some supplies also have an adjustment for the current limit inside, with others you'll have to study it and determine what resistor to change.

Even a modest sized lead-acid can supply enough current to set fairly heavy wiring on fire in case of a short. Therefore it is essential to

include a fuse right at a battery terminal. (The current limiter and input fuse of the power supply will prevent it from supplying a dangerous current, only the battery needs to be fused). This fuse should be sized according to the capacity of the wiring, such as 30 A if #10 wire is used. If there is any wiring in the system that can't handle the current that the main fuse will permit, then those circuts need to have their own smaller fuses.

With this setup you can leave the supply and radios on all the time if desired, ordinarily the supply will be providing all the power and the battery will be "floating". If the power fails the battery will pick up the load immediately. If you're leaving the house for a while, turn off the power supply and remove the battery fuse to keep anything from going wrong.

>my own.

First off, in defense of the people on the newsgroup, perhaps no one was
able to answer your question. I have no idea where the "Hampton Roads"
area is. Out of the 800,000 or so hams in the US, only a small fraction
are on Usenet. Of those, you have to be lucky enough to have someone read
your note that can actually answer it. But that's about as far I will go
in defending most of us.

You have hit on something that has been discouraging me - it appears to
have discouraged you a bit too....

The amateur newsgroups are pretty worthless. It seems like all of the
postings are nothing but stupid, petty, beat the carcass arguments. Code?
No code? Who's a "real" ham? Over 80% of the postings in r.r.a.policy are
arguments over code that are going nowhere.

These arguments are over politics. That's it! Among amateurs, the code/no
code debate ranks right up there with the debate over abortion. NOBODY
HERE HAS THE ANSWER that will satisfy everyone. But we'll beat the hell
out of it!

These stupid arguments are not doing us any good. I am surprised that Matt
is still going to take a test and get involved with this hobby. He must
have a someone that is encouraging him. It must be enough encouragement to
offset the newsgroups. I'll tell you something....If I had started

reading/paticipating in these newsgroups before I had a license, I may have never gone down to take the test. Who wants to join the ranks of such a bickering group of divided people who will probably never agree.

I must be in bad mood this morning. I think I had better quit now before I people think I am related to Burt Fisher.

4615. OEM1M Multimedia Test

RADIO AUSTRIA INTERNATIONAL
will operate special event station OEM1M on occasion of the International Marconi Day, on Saturday, 20. April 1996, 0000-2400 UTC. Modes and working frequencies will be announced at the full hour in all our broadcasts.
- For the full schedule look at our homepage http://www.ping.at/rai/
or write to: Radio Austria International, A-1136 Vienna, Austria/Europe
or send me a netmail

Skeds are possible and will be announced at our homepage.

If you'd like to take part in our multi media test:
- check whether you can pick up our sigs at 0905, 1205 and/or 1605 UTC on 6.155 and/or 13.730 khZ (or via ASTRA Digital Radio)
- register for a sked at info@rai.ping.at or Fido 2:310/39.44 or packet OE1WHC@OE1XAB.AUT.EU
- If you don't forget to provide the necessary information we will inform you if you are being put on the list
- Listen to Radio Austria International on 20 April (at times and frequencies mentioned above), and we will announce your call-sign and assign a working frequency.
- Go to that frequency immediately and (hopefully) enjoy the QSO with OEM1M. You will never again have so many listeners - the test will be broadcast live by Radio Austria International to its worldwide audience.

Yes, there is a beautifuil special QSL card, too.

The GLOBAL POSITIONING SYSTEM is suppoosed to be full accuracy
sometime in the near(?) future. No changes are needed to the receivers

The stupid military finaly saw the light. The FAA and Coast Guard
are installing radio transmitters to to transmit correcting signals
so as to cancel the errors that were being introduced.

The military was putting in errors and the FAA was taking them out.

Job Offering:

Technical Editor for 73 Amateur Radio Today

I am moving on to other aspects of the publishing business and am looking for someone to fill my position at 73.

To be a candidate for this position you should:

Hold a valid amateur radio license

Have an understanding of radio and electronics

Have a working knowledge of technical drawing, desktop publishing and photographic scanning using Macintosh computers.

Be able to edit manuscripts and reviews for technical content.

Work with manufactures and authors to schedule and develop product reviews.

Want to live in New Hampshire

If interested please email

Source record: 228365

I'm getting off 220, and am selling these rigs to pay for some
144/440 gear we're putting in here.

HT's:

KENWOOD TH-315A, very little use. With case, small charger, manual.
$225.00 plus shipping.

TEMPO S-2, a veteran, but works great. Thumbwheel freq.selection,
factory installed tone board, telescoping and rubber ducky
antennas, manuals, case. $175.00 plus shipping.

MOBILE RIGS:

Icom 37A, with mike/manual. Used mobile. Works fine except at temps
below 10F (squeals, etc. - a lot of rigs die of fright until car warms
up!!!) $225.00 plus shipping.

Kenwood 321A, tone, mic, manual, etc. used mobile but in excellent
shape. $300.00 plus shipping.

NOTE: This rig goes with the companion 221A for "stacking" for two
meters as well. The 221A is also available TO THE BUYER OF THE 321A
(NOT SEPARATELY!) with the stacking mount, for an additional $200.00.

Kenwood 3530A, toneboard installed, mic, manual, etc. never used mobile.
A really nice 220 rig, more elaborate than the 321A but bigger, so I
used this one in the shack. $325.00 plus shipping.

Most (I think all actually) of the rigs come with factory boxes and
all paperwork.

e-mail replies only pleez.......
Thanks!

That's Global Positioning System.

>We are aware that the system was installed for military uses and that the
>US military "adjusted" some or all satellites to reduce the accuracy to 100
>metres or so.

Yes a deliberate dither called SA (Selective Availability) is part of
the CA (Civilian Accuracy) part of the system. GPS depends on precise
time signals, and those are made to jitter about their correct values
when SA is turned on. The satellites transmit in two bands, 1.5 and 1.8 GHz.
The civilian receivers use the 1.5 GHz signals only. Military receivers use
both. The 1.8 GHz signals are encrypted with correction data that allows the
military receiver to remove the SA dither from the time signals. (That second
signal serves another purpose too, more below.)

>My grapevine tells me that Pres Clinton recently announed this "adjusting"
>would be stopped and the full accuracy made available to all.
>
> Correct?

Yes, though not immediately.

> Can existing GPS receivers get the increased accuracy or is
>new/upgraded equipment needed?

Existing receivers do benefit if SA is turned off. During the Gulf
War, there weren't enough military receivers to equip the troops,
so civilian receivers were pressed into service. SA was turned
off so that they would have sufficient precision. During that period
when SA was off, a noticeable improvement in accuracy was observed
by those of us with civilian receivers. 2D position errors consistently
fell to less than 30m, usually to 10m or so depending on the geometry of
the satellites in view at the time. 3D position retained greater uncertainty.

The military receivers are still better, however, because they can
use the two different frequencies to compensate for atmospheric
delay factors. The signal has to travel down through the ionosphere
to reach the receiver, and differing values of ionization and different
path geometries give different delay factors. Those factors are for the
most part frequency dependent, so by using two frequencies and noting
the differential, the current atmospheric correction factor can be
inferred for each signal path. This can reduce uncertainty down to
2-3m for the military receiver when the geometry is good.

However, there is another way to increase accuracy that doesn't require a military receiver, and its ability to receive the encrypted channel. That method is called differential GPS and relies on having a receiver at a known benchmark position which broadcasts its apparent received position. The delta between the apparent position and the actual benchmark position can be applied to mobile receivers in the same general area to compensate for the various error terms, including SA and atmospheric delay. And we can do that right now without waiting for SA to be turned off.

A more advanced differential method uses the satellite signal phase directly to determine position, and can resolve down to centimeters. There's another "gotcha" though, ultimate geodetic accuracy depends on the satellite almanacs, and they can drift, IE become outdated between updates due to the orbits of the GPS satellites being perturbed by a number of factors. So while you can get excellent *relative* position information between two points with differential receivers, your absolute position remains somewhat uncertain unless the absolute position of one of the receivers is determined by other means. There are astronomical methods for doing that, ranging from the older optical methods to the latest interferometric methods using quasi-stellar sources. And of course the old rod and chain method could have been used to establish a benchmark too.

There's yet another "gotcha" with most civilian receivers. They use a simplified geodetic model for the Earth that causes further errors in absolute position determination. This is especially troublesome near the poles and near the equator. In the temperate latitudes, the deviation is small. (The Earth isn't a sphere.)

May a 42-year old Extra Classer who's been a ham since 1969 (*and*
supported the no-code license) make a point? You may be looking in the
wrong places on HF. Also, the fact that we're near the bottom of the
eleven-year sunspot cycle makes the "right places" rarer.

One of the main reasons I got into ham radio was to have meaningful
conversations with people in faraway places. It still holds. Yes, I've
gotten WAS and DXCC, but that was never my primary goal. I'd much rather
have a real conversation with someone in a "common" country than exchange
"59 73" with someone on a usually-uninhabited Pacific atoll. Also, a QSL
is much more meaningful when it is a memento of a genuine exchange of
thoughts.

The best place to have meaningful long-distance conversations are the WARC
bands, and frequencies higher than 18 MHz. Ten meters, when open, is big
enough that people can spread out, and you don't have to have a killer
station to get through. The same is true of 15 meters to a lesser extent.
Much of 20 meters, and the Extra and lower Advanced portions of any band
are going to be contester/QSL collector territory. Generally, the higher
up a phone or CW/digital band segment you go, the more casual the
operation.

Recent licensees who have not experienced the good sunspot years may draw
an incomplete conclusion from what they hear on HF today, when often
everything above 20 meters is nearly silent. Believe me, when 10 or
15 meters is hopping, there's plenty of conversation going on.

Another good place is 10 MHz--a true "gentleman's (and lady's) band." You
do have to be good at moderate to high speed CW there to have a real

conversation, but it is possible. I used to CW-chat with Aussies and New Zealanders long into the night a few years ago. You can also go digital with Pactor or Amtor. Ten MHz is still open in the afternoon and early evening. 18 MHz is primarily a daylight band, but I hear lots of conversations there, too. And humble 80 meters is often open around the country in the evening. If you don't like CW, fire up your keboard and do some Pactor around 3600 kHz.

A couple of months ago, I chatted with a Japanese psychologist on 15 meters. We were comparing family life in our respective countries, and the differences between our cultures affected his profession. Fascinating. I recently talked to an American civil engineer living in Indonesia. He had some wonderful stories. When I was a teen-ager, I had a regular schedule with a guy in England, and we'd discuss world events each week.

I've done all this and more without ever owning an HF beam--just dipoles and verticals. Yes I have to work for those contacts, and they don't happen every day. But they do happen often enough that I'm glad I'm a ham.

I'm getting involved in the high-orbit satellites now. My goal is the same--meaningful conversations. But I'm not selling my HF rig. The ionosphere isn't dead yet, just snoozing much of the time.

I suggest that you stop listening to the fundamentalists who have made opposition to no-coders or pro-coders their One True Faith. Just ignore them. You'll have a lot more fun if you find people who have interesting things to say, and talk to them. One unfortunate thing about both the Internet and ham radio is that people who are angry about something can always find "flame partners" to keep the anger going. It's a classic feedback loop that goes nowhere.

You're not going to like everyone you meet on the street. You're also not going to like everyone you meet over ham radio. But there are plenty of nice, interesting people out there. Some of us even have upper-class licenses.

73,
Peter - KD7MW

Depends on the capacity of your gel cells.

> I have a 10A-15A, 13.8vdc power supply that is very well
> regulated and filtered for the source.

If the current can be limited to 10-15% of the capacity of the gel cells,
you can use this power supply for trickle charging. Gel cells can be
fully charged with 14.4 volts and kept floating at 13.8 volts. I am
using a similar setup for 144 and 430:

transformer (20-22V) -> rectifier -> 7815 -> silicon diode -> 14.4 volts
switch across second diode -> 13.8/14.4 volts.

My gel cell has 9.5 Ah and the 7815 regulator has a maximum current
of 1.5 A, so the whole setup was really cheap and simple. If you need
schematics or further information, email me.

Hope that helps,
Jens, DB9LL

I had a similar problem with an IC02 once and solved it by opening
the unit and pressing the little button on the inside. Seems to be
the "complete reset" button is the only thing that _really_ resets
the battery-buffered CPU.

Hope that helps,

(I sure hope I got this constrained to AMD only!)

If you're a ham and you work at AMD, please read this!

We're starting an amateur radio club at AMD Austin. If you're in Austin, send me (or Curtis.Doss) e-mail for more info. We're just getting organized to ask AMD for space and support, so your interest is important.

If you're not in Austin, we'd like to know about any non-Austin AMD ham clubs (or hams, for that matter).

The Ham Radio and More Show, celebrating it's 5 year anniversary this month on the broadcast bands, has new shortwave frequency changes that will greatly enhance it's coverage.

Effective 4/7/96:
WWCR shortwave will air the show LIVE each Sunday at 6:00pm ET, (2200utc) on 7.435mhz AND 12.160mhz.
Also, tape delayed at 5:00am ET (0900utc) Mondays on 3.315mhz and Saturdays at noon ET (1600utc) on 12.160mhz.

Call in and be part of the show. The toll free number is 1-800-293-5366 and outside the country at 602-230-2755. Fax at 602-241-1540.

Len Winkler, KB7LPW lenwink@indirect.com

There is a simple charge controler detailed in the March(?) issue of
QST. It is designed for solar power use but would work just fine with a
conventional power supply. It's real simple. Have a look.

Darn! :-(I like tubes. They're fun, they're warm, the light up, they use fun-to-play-with higher voltages and (in my opinion) their audio output sounds better.

>your knowledge about tubes will translate fairly well to questions
>about FETs. Bipolar current driven circuits, digital logic, PLLs,
>DDS, and the like may confuse you a bit however.

Ermmmm... I don't think that those things will confuse me too much, as I'm familiar with digital logic and transistor circuitry as well. Of course, I'm not as familiar with it as I used to be.

>>Should looking over my notes from back then, and learning Morse Code,
>>be sufficient to at least get a passing score? From what I gather by
>>reading messages in this newsgroup, there's more than one type of FCC
>>test to take - how do the tests differ?

>Get the new study guides. Nearly half of the exam is about
>regulations, and those have changed significantly. Most of the
>technical questions don't focus on individual active circuits.

They don't??? I thought that one wasn't allowed to service and calibrate radiotelegraph transmitters, etc. without such knowledge. What's going on?

>The default entry license is now Tech (everything above 30 MHz),
>which requires no Morse speed testing, so you can get an amateur

Whoops... it looks like I didn't ask the right questions to begin with. After taking a look through some old notes and Shrader's "Electronic Communication" (7th edition), it it seems that I was referring to the FCC First Class license, not the amateur licenses. It was the FCC First Class test that I was planning to take a while back, but ended up transferring to a four year college to continue on with some other studies instead. I came so close to taking that test, and was quite ready to pass it at the time - I wish that I had taken it. Now, I thought that I'd try to see how much of that knowledge I'd retained and could brush up on, and thought that it would be fun to try to take the first class test something in the next year or so.

Do I recall correctly that the FCC First Class test was renamed to
something else a while back? Has this test changed much? That is,
are the questions much different than the ones shown for the various
commercial license elements in Shrader's book?

Hi there,

I have recently set up a script to automatically generate sample exam papers in response to an email request. For example, to request a Novice paper, send an email to:

exams@eeyore.biochem.mcw.edu

with the line:

generate novice

as the body of the email, and a sample novice paper, plus answers, will be returned to your email address in due course. Simply replace 'novice' with technician, general, advanced, extra, or extra96 (new question pool for exams after June 1996) for the other exams. Some figures are required and whilst these aren't provided in the email a figure sheet can be obtained from the ARRL.

All these exams can also be taken via the WWW at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

where all the figures are provided and the exams are graded on-line.

>Jerry W4UKU flanders@groupz.net

I have to agree to a point.....HOME station equipment is likely covered by Homeowners...SO are HTs as they can be used both in the house and away... mobil gear is ALMOST never covered by HOME or CAR insurance and is best covered by ARRL or similar sponsored insurance (riders sometimes do not help on personal insurance packages)...

I lost ALL my gear in my Blazer last year during a break in....I had two Yeasu rigs (that were used at home...they had been to the shop being checked out and they were stolen during the return trip home while visiting some friends), a Standard HT, a cellphone (bag version) and CD player/ALL my CDs in a tote bag and my COMPANY's Toshiba 4600 laptop...

My insurance (State Farm) paid on the damage to the trunk and the CD player on my car insurance...the ham gear and cellphone were covered by homeowners...(at Replacement cost with a $250 deductible...wish it had been a $50 like the ARRL sponsored stuff! which I DO have at my rptr sites)...and alas, the laptop was covered by NEITHER (it wasnt MY laptop and they dont cover business equipment in a personal vehicle!...IF it had been parked on my driveway or property, they would have covered it but only to $2500...not the 4 grand it cost originally!)..

I got out of the deal about 1300 for all the RF gear and CDs that were stolen....considering it was well over 2100 original cost didnt help

any..

SO the moral is...
FIRST...make SURE you have receipts on EVERYTHING..or boxes or proof you own the gear for the insurance guys!

For gear used IN the house, your homeowners WILL cover it (check with your agent NOW! and get a replacement cost policy..it doesnt cost that much!)...

For gear used in the mobile ONLY (IE not an HT, etc), get the ARRL sponsored insurance....and maybe add an HT or whatever for a better deductible...

For gear that is NOT yours, either LEASE it (and have proof...) or get rid of it....and use the ARRL sponsored insurance....or similar...
The AHW insurance sponsored by ARRL does cover gear you lease (I have my company's IFR 1200s on my policy now...I "lease" it from my company..it made the premium DOUBLE....but its better than paying 8-9 GRAND for a new IFR!)

4639. HF radio-telephone question

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-02 00:00:00 UTC
From: Carl Rosenberg <carl@genome.wi.mit.edu>
Message-ID: <3161AE53.59E2@genome.wi.mit.edu>
Source record: 228384

Hello Radio knowledgeable people,

I'm an aviator with limited radio knowledge, with a newbie question about HF radios.

I need to put in an HF set to go far away from land, and a unit (King Gold Crown KHF 950, 150 watts SSB) has been suggested.

Question: can I use an SSB transciever to link up with phone networks? The literature mentions "all 176 ITU semi-duplex channels in the radio-telephone network permanently stored in memory". What's an ITU? What radio-telephone network?

Is this something I could use on a remote, phone-less airstrip to tie into the telephone network? E.g. in the Bahamas or Africa, or in the air somewhere?

Are there more modern or more economical aviation units than the KHF 950?

Thanks much,

Carl Rosenberg

SS>Subject: 2 meter or 440Mhz?

SS>2 meter or 440 Mhz?

Hi Stan,
Radio Shack Makes a good HT for 2m or 440, I would suggest 2m as 440 is not used a lot in most places,(mostly private repeaters), you would get bored scanning the 440 band all day trying to find someone to talk to. 2m is much more widly used and there are tons of open repeaters in most areas, not to say 440 is a waste, but for a new user I think 2m is the better choice, espically if you have a limited income. One (and only!) drawback to the realistic 202 is it is not modifiable for out of band reieve/transmit,ie it is not a "scanner" for public service bands etc. but this is also a vote in favor of it because it is one of the best radios for intermod rejection! Maybe you could afford a dual band ht. this would give you 2m & 440.
73,
EJ N6OID

>that amateur radio in fact existed, and that amateur radio might offer
>something of value to you? It was probably a magazine article or word
>of mouth from an existing amateur, and those are both examples of
>primitive forms of marketing.

If you want to call it that, OK. The thing is that I already had an
interest in all forms of radio (I would even say that I was "born" with
it. No need to market it here...

>Oh, a few might stumble across it anyway, but
>that isn't a very effective method of attracting the attention of people
>who might make fine amateurs if only they knew it existed and what it was
>about.

No, I would venture to say that if you have an interest in Radio in
general, you will find, out of your own initiative radio in all its
forms.

>So we get people who want to be high
>power CBers, and people who only want to avoid cellular charges. This is
>an example of *bad* marketing.

Well, if you are going to "prostitute" the hobby and lower the
requirements (dumbing down) then you have to cater to that element,
right?

>So we need good marketing to make sure that the "product" is placed
>well, attractively packaged, and relevant to the target audience.
>Then we'll get the type of potential amateur we want to at least come
>into the showroom and kick the tires to see if we have been lying.

I disagree for the reasons outlined above.

I can agree on bypass-salesman part. They seem so helpless and confused when you ask anything. I've heard that the policy for the local store in Helena,MT is to not hire people that either know something or think they know something as to avoid lawsuits from angry customers who got advice from the salespeople.

One of the greatest I saw was a R.S. salesman trying to explain the purpose of a squelch control on a CB. He told the lady that the squelch controlled how far she could talk. Sounded to me more like variable output power, oh well. Then he continues on to tell her that she can use her SWR meter to tune her antenna by calibrating the meter and switching it from CAL to SWR and it was tuned up and ready to go.

If you want to have fun with R.S. salesmen, have them find your items for you by describing what they are. You can bet that most of what you need they don't have any such thing. Then you can grab it off the shelf yourself.

Hi Mark

Sorry they are paying you so little, the RS stores near me are much
higher.

I don't think RS is interested in technical sales, else, everytime
they have come up with a good product, they wouldn't have dropped it
soon afterwards so they had room to carry some useless trinket that
sells like hotcakes, just because it useless.

Over the years RS has, at one time or another, offered some very
excellent products, most of which I still have and use.
Unfortunately, they are in business to make a LARGE profit for their

investors, thus they only carry what moves the fastest at the time, and with the highest profit margin. In many cases, it has absolutely nothing to do with the name of the store, like non-electronic toys, etc.

Got to Go
Gary

If you check any of the mod databases you will find sveral. My 765 is about 2.5 years old and had most of them already installed by the factory. I did the passband tuning mod and another mod I came up with to use the 250Hz second IF filter on RTTY. If you would like details, e-mail me.

Ken,

Sorry that this has evidently happened in your area. However, you should remember that it may not be the same
elsewhere. Here in Idaho in the last several years, we have been providing NEEDED communication help. During one
widlfire season two years ago, the Forest Service asked for our help. This, even though the location was a relatively
short distance from the National Interagency Fire Center with its state-of-the-art communications equipment. We have
also helped during other bad wildfire seasons, and provided the main communications in some areas during the recent
floods. We have also been asked by the National Weather Service, as well as various search-and-rescue and
law-enforcement groups, to assist with communications. Possibly you just live in the wrong part of the country.

: A 38 special is good for blasting holes for RG58 and RG59. A 45 Cal is
: good for RG 8 and RG 11. I have no experience with the larger hardline
: cables.

My problem is that the .22 works great for the RG-58
on the outside of the house, but the hole on the inside
is big enough for any hardline, but what to do?

Anyway, the original poster did not mention where his
coax is going, and I can't believe that anybody hasn't
mentioned lightning protection. I've got a sixteen
hole Polyphaser entrance panel (PEEP). It works with
sixteen inch centers, and this particular model has
eight ports on each side of one of the studs. It will
accept coax or hardline up to three inches in diameter
which ought to do fall all but the most ardent uwave
fanatics, and the protection devices bolt right into
the unit. Four six inch wide copper straps go down to
a perimeter buss bar to which are attached ground rods.
It is definitely adequate.

4660. Severe Handicap code exclusion ABUSE

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-02 00:00:00 UTC
From: choffman@pelican.davlin.net
Message-ID: <4jqb06$nm3@news2.cais.com>
Source record: 228437

BTW if there are observations of inappropriate use of the "severe handicap" code waiver provision on applicaations for FCC licenses being exhibited in your area?

Here, we do have individuals able to find hapless medical doctors willing to approve the form for the license application for medical reasons, cannot learn the code. Reports locally I am told seem somewhat minor, or at least not severe handicaps.

One example is a guy (KC5QLI, advanced nocode license now) with a hearing disorder he calls tinitius, who is very active on the bands and able to hear voice perfectly well, but cannot learn the code. Since I have the same aflliction in my hearing and use high speed daily for the last thirty years I don't really understand. Is this a unique medical situation, a general amateur radio issue or just an isolated incident of abuse of the system?

I have disucssed the topic with licensed professional public school administrators working in the field of special education, who are also licensed radio amateurs, who all say this situation is being abused and the FCC provision is clearly provided for persons with SEVERE handicaps.

Is this a issue NOT about handicaps, but perhaps about sociopathic individuals who want something for nothing? In my personal radio experience in the last four decades, the community has always risen to the call of the handicapped (total loss of hearing, quads, strokes, etc) with devices to assist and bridge the gap. This has been a personal pride of assisting and becoming involved with disabled persons who, as a result, experience a real sense of accomplishment.

The new FCC form seems to allow a window of opportunity for the advantaged to acquire, via a system to support the disadvantaged. I wonder if anyone has observed and considered the same concepts at play and if in the affirmative, what should be done to correct any possible unjustifiable benefits being derived via the oversight in this system?

Who should correct the situation if it needs to be adressed at all? Many respected old timers in this area are very concerned with this situation and feel there is an urgent need to clarify the admitance to the testing room procedure, or to change the FCC rule on this or at least change the FCC license application to indicate the explicit nature of the intent of the rule for the "severe handicap".

Best regards,

K5SBU

* = New data. T index may have changed.
^ = IPS predicted T index

The IPS Monthly T index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T index is not
available until some months later.

The predicted smoothed monthly T indices are computed by using a statistical
analysis of the observed monthly T indices for all solar cycles since 1938.
The IPS T indices may not be updated each month but only when sufficient new
data becomes available.

==========

2. FLARES AND SHORT-WAVE FADEOUTS - NONE

2.1 Comments on Solar Activity.
Low activity was observed on 23 March due to a C1 flare. Very low
activity was observed on other days during the month of March.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
11 Mar 96: mostly unsettled
13 Mar 96: unsettled to active
20 Mar 96: quiet to active, with a minor storm period 12-15UT.
21 Mar 96: unsettled to active, with a minor storm period 15-18UT.
25 Mar 96: quiet to unsettled, with an active period 15-18UT.

The geomagnetic activity on the 11th of March was more intense
for the northern hemisphere, with minor to major storm levels observed
00-06UT at Boulder, Colorado in the U.S.A. Canberra K index values
reached active levels during the same interval.

==========

4. IONOSPHERIC DISTURBANCES (for Australian Region)
03 Mar 96: depressed 30-40% 00-06UT northern region only
04 Mar 96: depressed 30-40% 00-06UT northern region only
13 Mar 96: depressed 15-20% most of UT day, northern
and southern region
21 Mar 96: depressed 15-30% most of UT day, northern
and southern region
22 Mar 96: depressed 15-20% during local daylight hours, northern
and southern region
29 Mar 96: depressed 20-30% southern region only

The most significant ionospheric disturbance was observed on 21 March
with strong depressions observed at all ionospheric stations in the
Australian region.

==========

>N5LMX/DA1WG

That's strange! Who ever told him that was off base. RS will give a ham a name badge with his callsign on it if he/she wants it. I know that it made it easier for me to break the old "he's a $4.25/hr sales droid" mentality. I was *almost* sorry I had to give it up for one that said manager instead. Since I got my ticket a year ago, I've encouaged several RS employees to get theirs (only one managed to do it). I don't encourage it for financial gain, but the day is much more interesting when an "old timer" comes in and you spend an hour on a slow day talking about equipment, QSOs or whatever. I met my elmer that way.

I think SuperMorse generates simulated QSO's. That's what's on the
test (at least when I took it).

Good luck with the upgrade. :)

You've obviously never worked around professional technical sales
people. Most outside the consumer markets are knowedgeable about
their products and concerned with their clients' long-term success.

>Radio Shack is a sales oriented establishment, not a laboratory or
>scientific lab. That is why all the blank stares!!

No, you get blank stares because you're dealing with clerks. Anyway,
if you don't like the service, don't buy their products. Eventually
they'll either pay the wages necessary to attract better qualified
personnel, or they'll stop stocking the items that bring technical
customers into the store.

Say, what's the name of that scientific lab you mentioned? I need
some speaker wire. ;)

"NO-CW" CHORUS

CW - THE ESPERANTO OF AMATEUR RADIO.

The great debate of whether to abolish morse code as a prerequisite to
obtaining a full amateur radio licence would never have materialised if it
were not for the introduction of the restricted, VHF-only, licence. The
reason for this statement is the fact that, up until the introduction of
the restricted licence, passing morse code at 12 wpm was the only way of
obtaining any form of amateur transmitting licence.

Unfortunately, this has now given a platform for the restricted licensee
to air his views on the subject, especially with the advent of packet radio
and BBS's. Can you imagine radio amateurs in the past heeding the views
of short-wave listeners not wanting to learn morse code for an amateur
radio licence? Yeah, right!

When one writes examinations at school on subjects that one may never ever
use in life, such as history or biology, it is accepted that one has to do
it to obtain the certificate of education. Why should not this apply to
the amateur radio qualification?

Learning morse code is as simple as learning an additional 45 new words in
one's vocabulary. Words are sounds exactly the same as morse characters
are. Bearing this in mind, I feel that any amateur who is part of the no-
morse chorus has put his ability and intelligence in question.

Any idiot can pick up a microphone and talk, but it takes a real amateur
radio operator to converse in morse code.

Come on, stop beating about the bush and just get on with it.

Does anyone use their Amiga for Ham utilities.
I wrote a HF-Fax decoding program if anyone is interested in swapping.
Would like Morse and Rtty decoding programs or 68k Source files,
so I can write it myself.

Cheers RR

: topic and others. Or maybe I'll meet you on the air.

: Regards,

: Jim Kempe WQ8R
: jgkempe@bright.net
: "gun control is how steady you hold your rifle"

--It is very interesting to me as a gun owner, target shooter, plinker
and enthusiast in general, that many hams seem to be NRA members and
gun owners. I also notice some hams are model RR enthusiasts as well.
I have an interest in all three. Is this common?

I also notice a hostility towards radio amateurs by younger internet
users who are not hams. The mentality of these people is strange to
me. It seems like they resent hams because you have to pass a test
to be granted the priveleges. It reads like a bitterness that you
must demonstrate competence; you can't get instant gratification.
You must learn some theory, which takes a little time and effort.
I wonder if they feel bitter about having to take a driver's exam
and road test? Maybe the federal government should close the

universities down and just *sell* instant accreditation so these
cretins would be spared the "unfairness" of doing the work....

From: rhg@sydney.DIALix.oz.au
Message-ID: <4jr7td$7d7$1@sydney.DIALix.oz.au>
Source record: 228446

Hi,

I am the author of HAM LOG 3 - the IBM computer program for amateurs to log their contacts. In its fifth year of development, Ham Log has been acclaimed world-wide.

It is a professional program that has a enormous facilities and functions, yet very simple to use. From the last review in The Canadian Amateur magazine:

"This is the first computer program I have in years that I really cannot find anything to improve on. With so many features, it is beyond this reviewer's ability to do it full justice. I rank it [Ham Log] as one of the 'breakthroughs' in computer technology applied to t his fine hobby, ranking with Baycom, JVFax and Hamcom."

In Amateur Radio Action (Dec. '94), the editor Len Shaw wrote:

"... the opinion of many, myself included, Ham Log is already the best such product on the market. In my position as editor, I get to see and use most logging programs at some time or other and from my first encounter with Ham Log, I have believed it to be the best available - and that includes some quite expensive American programs."

Now, the functional demonstration version of HAM LOG 3.1 is available on the Internet for downloading. There are two files to get: ham_log3.zip (about 290k) and ham_log3.txt.

FTP to ftp.une.edu.au
Ham Log is located in the directory: /pub/ham-radio/ham-loggers
(Note, this is a new directory name.)

The HAM_LOG3.ZIP file is also available at:

oak.oakland.edu - /pub3/hamradio/dos/logging

ftp.funet.fi - /pub/ham/hf-log

If you have any queries or comments, please e-mail me at:
rhg@ozemail.com.au

I'm certain you will be impressed with THE Ham Log v.3.1

Kind regards,

Robin Gandevia VK2VN

Hi!

I want to use my IC-737 with a SSB-electronics transverter to operate on 70 cm in Europe. as the HF-rig only covers 28 to 30 MHz and the transverter can be altered to operate on 2 * 2 MHz i miss 2 MHz on the satellites. I would like to get the HF rig to operate from 24 to 30 MHZ and get the whole (european) 70cm band in one peace.

Is there anybody who knows how to do this mod with the Icom rig?

Thanks in advance!

/ SM7PAF Tommy

>So why did someone reply back to my original posting saying things
>should be back like the good old days then? Seems to me you have to be a
>stereotype to operate a ham radio? That's what I mean!!

Maybe because in the 'good old days', Ham Radio was a 'Gentlemans
Hobby'. Ham Radio Operators treated each other with courtesy and tact.
If this is a 'stereotype', then it's one that I hope I'm still equated
to.

Obviously this is no longer true (just listen to 80m on a 'good night').
Sad, but true.

> So don't go twisting my words around and making me into things I am
> not for you must be a so-called bigot too then, won't you?

I don't think anyone is trying to 'twist' your words. You are making
yourself clear enough. You seem to only wish to hear what you 'want' to
hear and don't seem to be too interested in others points of view.

You need to keep an open mind and not take 'rantings' personally.

W5YI sells one on diskette in QST. That's probably where you saw it.
Once the vanity callsign program gets underway, the list will change so
fast that the diskette will be obsolete by the time it arrives at your
house.

4678. UHF FM commercial transceiver modules

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-03 00:00:00 UTC
From: umbra@opennet.net.au
Message-ID: <4jsoal$1r8@Tandem1.opennet.net.au>
Source record: 228301

I am working on an AVLS project in Asia that may require up
to several thousand units and I have been let down badly by a
supplier.

Actually, we are using a conventional VF transceiver in the
range 460-490 Mhz, up to 5 Watts FM. This is the 'let down' product.
Synthesized, 12.5 Khz steps programmable using jumpers or RS232
download of frequencies.

Can use a modified OEM board from a commercial hand-held transceiver.
Don't need speaker, mic, chassis etc. just the board.

Does Anybody manufacture or supply an equivalent radio ? We need it
to be about 100 x 90 x 20 mm (not including BNC female connector).

Our requirement is for 3000 units by 1 June 96.

This is as serious as a heart attack, because our supplier
was supposed to have 4 samples ready on the 8th of February.
As I type this, we are still looking at 3 weeks delay before
we get even the SAMPLES ! So basically we are crippled by the lack
of a suitable UHF radio.

Please get back to me at your convenience.

Regards,

Zak Madden
Snr. Communications Engineer
Sakina Technologies

The US Govt announced via VP Al Gore that they will stop the military
error encoding for commercial/amateur use of GPS in 4-5 years time.

I agree, but don't forget that hams are a diverse group and that
one of the things they like to do most is talk. If everyone had the
same opinion about everything, ham radio would be pretty boring.

>I must be in bad mood this morning. I think I had better quit now

I have no idea where Hampton roads is, either. Sounds like someplace out
east. Perhaps if you had been a little more explicit, someone might have
been able to answer your query.

As for the other complaint: that these ham newsgroups are worthless.
Welcome to Usenet, gentlemen. Theodore Sturgeon, the science fiction
writer, came up with Sturgeon's Law: Ninety percent of everything is
crap.

I don't see why that wouldn't apply to Usenet as well :)

A few days ago I posted a query about code requirement waivers on behalf
of someone I'm elmering and received a flood of responses. Frankly, I'm
thrilled with all the OMs on this newsgroup who leapt to help me out. A
million thanks to all.

^^^^^^^^^^^
^^^^^^^^
^^^^

: B73
: Mike * QRV around 0800 and 1800 most weekdays on GB3HL *
: G4KFK * (Hillingdon 433.075/434.675) and also 51.83 MHz *

I must remind one and all that to pass electrical inspection
(do I have to get it inspected? you bet?) all antenna leadin wires,
coaxial coables, and control wires entering and leaving your shack MUST
pass thru a bulk head that is grounded to the service entrance ground.
In fact all electrodes (ground rods) must be tied together. That includes
all service entrance ground rods, your station equipment ground rods,
any and all antenna tower ground rods. This is to ensure that all grounds
are at the same potentioal. I have to run 500' of #6 solid Cu bonding
all ground rods at each tower, and I have two towers with man, many rods.

The article in QST is in error, and I should have expected someone
at the League would have caught it before publication. The Nation
Electric Code (NEC) is quite specific when it comes to proper/legal
amateur station design. Believe me, I know the amateur sections of the
NEC quite well as I am in the process of bringing my station up to spec.
I'm sorry if I rained on your parade, but please heed my warning.
Your insurance company may not pay for all your goodies after
the next lightening strike BECAUSE your installation didn't meet
the code.

I became a teacher and got paid for it due to the many free classes I taught
at a local high school. Even after I was a paid teacher I got many donations
through work done on my own time. However ham radio is so boring that
kids will not even take free equipment so I am selling the donations
to fund other projects in the school related to technology (which means
NOT ham radio).

4690. Digest of Articles - QST Feb 96 (Long - 44k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-03 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <4jtr2n$25a@news1.infinet.com>
Source record: 228313
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the February, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub3/hamradio/arrl/infoserv/digests
(in Europe)ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
SEND INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Another Way to Stack VHF/UHF Yagis
Author>Beezley, Brian - K6STI
Source>QST Feb 96, pp. 32-34
Abstract>Stacking four Yagis, two wide and two high, gives good results. But stacking them one at the top, two side-by-side in the middle, and one at the bottom of the mast gives highest gain and least side lobes.

Digest>K6STI is the publisher of antenna analysis and optimizing software. Using his programs, he has analyzed various ways of "stacking" two and four yagi antennas for the 2-meter band.

In a horizontal yagi antenna, the plane of the elements is called the E-plane, and the vertical plane that contains the boom is the H-plane. When one "stacks" two antennas in the E-plane, it means that they are mounted side-by-side. By adjusting the spacing between them, one can either maximize the forward gain or minimize the side lobes.

The author analyzed stacks of 8-element yagis at a frequency of 144.2-MHz. Optimizing the horizontal two-yagi stack for forward gain requires 150-inches (3.81-m.) between booms. This provides 14.38-dBd gain but causes the width of the main lobe to be undesirably narrow (about 10-degrees between minus 3-dB. points) with two side lobes less than 30-degrees from the "bore sight" (in line with the booms) that are only 7.5-dB. down from the main one. In that configuration, it is too easy to aim the antenna mistakenly to a side lobe. The side lobes can be reduced with a slight sacrifice in forward gain by reducing the spacing between booms.

For serious weak-signal work, many VHF/UHF operators use a "square stack" of four yagis, two wide and two high. With a vertical stacking distance of 99-inches (2.51-m.), and horizontal 107-inches (2.72-m.), the gain in the main lobe is 16.84-dBd. and the maximum side lobes are 15-dB. down from that.

An even better stacking arrangement is to locate one horizontal yagi at the top of the mast, two yagis side-by-side partway down the mast, and a fourth spaced a distance below the pair. This is what the author calls a "diamond stack". This configuration completely cancels the two first side lobes at 30-degrees from the bore-sight, and reduces the others to at least 25-dB. below the main lobe! The forward gain is increased to 17.60-dBd.

This configuration requires an overall vertical spacing of 238-inches (6.05-m.), and 151-inches (3.84-m.) between the two booms in the center of the stack. For 2-meters, this will require a heavy-duty, 25-foot (7.62-m.) vertical mast and a nearly equally heavy horizontal spreader 12.6-feet (3.84-m.) long.

Title>TA2:Build the Rotator Pal
Author>Brock-Fisher, Tony - K1KP
Source>QST Feb 96, pp. 35-38
Abstract>Describes a modification of Hy-Gain rotator controls to provide a single knob to set the desired direction; after it is set, the rotator will go to the indicated position without further attention.

Digest>This article describes a modification to Hy-Gain rotator/control boxes. Its use allows the operator to rotate the antenna to a preselected position by setting a knob to the desired position angle. It is not necessary to keep one's hand on the control; the rotator runs until the desired direction is attained, then automatically stops. The author states that the system should be compatible with all 8-wire rotators made by CDE and Telix/HyGain.

The article contains a schematic diagram showing the entire circuit of the rotator control box including the modifications, and a complete parts list. All parts are identified to include either Radio Shack or DigiKey stock numbers. In addition, there are step-by-step instructions for making the modifications inside an existing control box, and full testing, calibrating, and operating instructions.

An etched and drilled PC-board is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269 for $7.50, including domestic postage.

Title>TA3:DSP - An Intuitive Approach
Author>Herschberger, Dave - W9GR
Source>QST Feb 96, pp. 39-42
Abstract>Contains a non-mathematical description of digital signal processing.

Digest>W9GR is the man who first introduced digital signal processing (DSP) gear to most amateurs. His article in QST Sep 92: "Low Cost Digital Signal Processing for the Radio Amateur", caused a sensation in the ham community. Along with the article, he offered a kit of parts and thousands of hams built the original kits. He still supplies kits for improved and updated versions of his unit; in addition, equipment based on his designs is being built and sold commercially by others.

To gain a thorough understanding of DSP requires sophisticated mathematics at a level that is beyond many amateurs. This article represents a non-mathematical, intuitive description of the operation that will allow "mathematically deprived" amateurs to gain some general understanding of how the process works.

As used in amateur radio, DSP provides a variety of filtering functions that can be selected at will. Included are CW filters with bandwidths as narrow as 30-Hz. to AM filters several KHz. wide. The most notable characteristics of all of them is that the shapes of the response curves are dramatically sharp-edged, and even the narrowest do not seem to "ring"! Actually, they do ring (as all filters must); but the ringing is so much reduced from that in analog filters that one's initial

perception is that there is not any.

However, it is the noise reduction function that strikes most hams as near to magic when they hear it for the first time. This is a filter that discriminates against noise in favor of voice signals. Under some conditions, turning on DSP noise reduction when listening to a noisy signal causes an effect similar to the quieting that happens when one tunes in an FM signal and suddenly the loud hiss, previously all that was heard, completely disappears.

The essential difference between DSP and analog processing is that DSP handles all signals as series of numbers. In fact, the radio or audio signal must be converted to a stream of numbers, or digitized, before the procedure can begin. This means that the continuously varying signal must be sampled at a high rate and the amplitude measured, moment-by-moment.

Modern DSP circuits are embodied in a very large scale integrated (VLSI) circuit chip that contains a high-speed analog-to-digital converter (ADC), a computer CPU, memory circuits, and a digital-to-analog converter (DAC). The DAC converts the processed data back into analog signals capable of driving loudspeakers.

When producing straightforward band-pass filters, digital processing performs essentially the same mathematical functions that analog ones do. The great difference in performance is primarily caused by the fact that digital signals are not subject to the phase shifts and drifts of analog signals. In digital signals a 3 is always 3; it is never 3.01. Consequently, mathematical procedures can be repeated again-and-again, any number of times necessary to attain the degree of precision required, without cumulating large errors.

When it comes to noise reduction, however, a different kind of processing is used, called "auto-corelation filtering". Auto corelation refers to the degree of repetitiveness of a signal. A pure sine wave has the highest degree of auto corelation, since every cycle is precisely the same as the one preceding it. The simplest example of an auto-corelation filter is the DSP automatic-notch filter that rejects carriers anywhere in the passband because they are perfectly auto-corelated sine waves.

Pure "white" noise represents the opposite extreme. There is no corelation, at all, between the signal at one instant and at the next. Voice lies between these limits. The noise reduction process rejects signals at the two extremes and passes whatever is between. The results are never perfect and, in the case of some types of interfering noise, the process is wholly ineffective because the interference, itself, is partially autocorelated. But usually the effects range from quite noticeable to amazing.

To date, DSP in amateur equipment has been limited to audio or very low i.f. frequencies (less than 25-kHz.) The reason for this is that the

ADC must necessarily operate at a sampling rate several times higher than the highest frequency signal being processed. As computer chips progressively reach higher and higher frequencies, the signal frequencies susceptible to processing will inevitably climb. Mr. Herschberger states that the day is not yet in sight when DSP will be done at a 9-MHz. i.f., for example. But, certainly, someday it will happen. In the meantime, we can expect to see a continuing procession of more and more sophisticated applications of DSP in the amateur field.

Title>TA4:An In-Room 80-Meter Transmitting Multi-Turn Loop Antenna
Author>Marris, Richard Q. - G2BZQ
Source>QST Feb 96, pp. 43-45
Abstract>Construction details for an indoor transmitting loop antenna for use on 80-meters. It is a 5-turn loop, approximately 30-inches (0.76-m.) in diameter, to be used only at low power.

Digest>G2BZQ now lives in an apartment in Minnesota and is forbidden outdoor antennas. His favorite band is 80-meter CW, so he decided to operate a QRP transmitter with an indoor antenna. The antenna that he selected is a 5-turn resonant loop, approximately 30-inches (0.76-m.) in diameter. This article describes its construction.

The loop is wound as an octagon-shaped flat spiral. It is supported on spokes made of four thin strips of wood fastened together by a single bolt at their centers. They are fanned out to 45-degree separations, and glued in place. Near the end of each, a six-terminal barrier strip (Radio Shack 274-659) is radially mounted, the terminals of which are used to support each turn of wire, in sequence. The wire used is No. 18 stranded copper lamp cord obtained by slitting zip cord in two.

The completed loop is mounted vertically on a wooden base. Also on the base is a 100-pF., 2-kilovolt variable capacitor mounted in a small plastic box. A coupling coil is wound of 6-turns of No. 14 copper wire, 2-inches (5.08-cm.) in diameter with turns spaced 1/4-inch (6.4-mm.) apart. It, the antenna loop, and the capacitor are connected in series so that they form a continuous loop. RG-58 coax feedline is tapped across 3-3/4 turns of the coupling coil.

Because the loop is so small, its radiation resistance is very low and its Q high, which means that its operating bandwidth is very narrow. It is necessary to retune it any time the frequency is changed more than a few KHz. To aid the tuning process, Mr. Maris adds two resonance indicators. Both are simple and inexpensive to build; schematic diagrams are included.

The author reports that, although the efficiency of such a small antenna is very low, of the order of 1-percent, it is surprisingly effective.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V

Asst. Technical Editor

Title>PR1:Kenwood TS-870S MF/HF Transceiver
Author>Wolfgang, Larry - WR1B
Source>QST Feb 96, pp. 71-75
Abstract>Review of a new transceiver that contains digital signal processing (DSP) at a low i.f. Kenwood makes the false claim that the DSP obviates the need of crystal filters.

Digest>With the Model TS-870S, Kenwood has fallen into step with their Japanese competitors, ICOM and Yaesu, and introduced a transceiver with digital signal processing (DSP) performed at a low i.f. frequency. In this case, the i.f. is extremely low, about 11.3-KHz. Unlike their competitors, however, Kenwood makes the outlandish claim that the filters provided by this DSP system obviate the need for crystal filters in the first and subsequent i.f.'s. Consequently, the radio has no provision for adding them!

Before this review proceeds further, let it be said that their claim is patently false. A side bar with the article, written by Jon Bloom - KE3Z, explains in easily understandable and incontrovertible terms just what the DSP can and cannot do, and describes the degradation of receiver performance that results from the lack of better filtering in the higher i.f.'s.

To summarize, he states that blocking dynamic range is degraded by 10-dB., or so, whenever a interfering signal appears within 8- or 10-KHz. of the desired signal. In practice, it means that if an operator is listening to an S-3 or S-5 signal and an S-9 signal appears within 8- or 10-KHz., the desired signal will be essentially lost. It seems most surprising that a manufacturer would introduce a new transceiver in the $3000 to $4000 price category designed with such performance deficiency compared with their competition.

With that subject out of the way, it must also be said that in almost every other respect the DSP system performs very well. In receiving, the low and high cutoff frequencies can be individually adjusted. As with other DSP systems, each cutoff limit is like a cliff; when a signal slides past, it seems instantly to drop to inaudibility. Not only does it provide the automatic notch, beat-note cancellation, and noise reduction functions common to other DSP systems, it also provides transmit audio processing. The operator can select high-frequency boost, bass boost, comb filtering, and/or speech compression. The reviewer commented that the transmitted audio "did not seem distorted even with 10-dB. of speech compression cranked in."

In most other respects, the TS-870S offers all the features that are common in high-priced transceivers, and very creditable performance. The tuning-control knob can be set to cover 5- or 10-KHz. per revolution. Then, alongside the knob is a "FINE" button that divides that value by 10.

The radio contains a built-in electronic keyer that was rated highly by the reviewers. In semi break-in mode, shortening of the first "dit", which is such a problem with some keying circuits, is barely visible on an oscilloscope. Another feature is a complete hardware and software package for Windows-based computer control of most transceiver functions.

As is now routine practice of the ARRL, an expanded Product Review Test Results report, about 30-pages long, that give detailed technical data on the transceiver's performance is available to ARRL members for $7.50 ($12.50 for non-members). The manufacturer's list price is about $3200, not including power supply. The Kenwood Model PS-52 Heavy Duty Power Supply adds $310.

Title>PR2:MFJ-9420 20-Meter SSB Travel Radio
Author>Ford, Steve - WB8IMY
Source>QST Feb 96, pp. 76-78
Abstract>Review of a tiny, portable, single-band QRP transceiver for SSB and CW use.

Digest>The MFJ-9420 is a tiny, simple, and very inexpensive single-band transceiver for 20-meter SSB. With an optional adapter, it can also be used on CW and will cover the full 20-meter band.

The entire cabinet is only 6- X 6.5- X 2.5-inches (15.2- X 16.5 X 6.4-cm.), not containing a power supply. It puts out up to 10-watts on audio peaks and requires 12-volts at 2-amps maximum d.c. power. It can be operated using a conventional power supply, or rechargeable battery.

The receiver is a single-i.f. superheterodyne with a built-in loudspeaker that provides sufficient audio for normal listening. No headphone jack is provided.

Front panel controls are limited to a tuning knob and a volume control, plus two switches: Power ON/OFF and Tune ON/OFF. The latter switch causes outpout of a reduced power carrier for use in tuning an external antenna tuner.

The reviewer was pleasantly surprised at the sensitivity and selectivity on receiving. He was amazed at his ability to work SSB DX with only a dipole antenna.

Manufacturer's list price is $229.95 for the transceiver; the CW adapter adds $39.95.

Title>PR3:JPS ANC-4 Antenna Noise Canceler
Author>Pocock, Emil - W3EP
Source>QST Feb 96, pp. 78-79
Abstract>Describes a null-steerer that effectively cancels noise using two antennas, one intended to capture maximum signal strength and the other to get maximum noise strength.

Digest>Although the review does not identify it as such, the JPS ANC-4 is apparently a null-steerer that operates in a manner similar to the one described by W7XC in QST Jul 94. The name refers to a class of circuits that use two antennas and an adjustable phasing network to cancel, completely or partially, unwanted noise on radio signals. One of the antennas is designed to maximize the reception of the wanted signals and the other to receive the noise signals as strongly as possible, de-emphasizing the wanted signals. In the phase-shift network, adjustments are made to shift the phase of the noise captured by the noise antenna 180-degrees from that of the same noise on the main antenna, and adjust the amplitudes in such a way as to cancel most or all of it, allowing the desired signal to come through with relatively little reduction.

The JPS unit is designed to be connected between the main antenna and the station receiver or transceiver. It will allow up to 150-watts of transmitted power to pass through it, without harm. It covers all frequencies from 100-KHz. to 80-MHz.

The reviewer found that the ANC-4 was very effective, indeed, in reducing electrical noise created by appliances and other sources in the same building or immediate vicinity of the radio. It was less effective on noise from distant sources. The unit comes with a whip antenna to be used for the noise pickup, but the reviewer was able to get much better results by substituting a wire noise antenna that he could route close to the known sources of motor noise, and the like.

People with intractable noise problems will very likely find that a null steerer will solve many, if not most, of their problems. The JPS ANC-4 is a well-built, convenient package, ready for instant use. Its list price is $175.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB

Title>TC1:Direct-Conversion Receiver Noise Figure
Author>Campbell, Rick - KK7B
Source>QST Feb 96, pp. 82-84
Abstract>Describes modifications to improve the noise figures of the original R1, R2, and mini-R2 receiver PC-boards described by the same author in QST Aug 92.

Digest>Mr. Campbell is the designer of the R1, R2 and mini-R2 "High-Performance Direct-Conversion Receivers" described in the article with that title in QST Aug 92. Many hundreds of these receivers have been built. In this letter, he describes the noise figure of the receivers as originally designed, and as improved by modifications suggested by Wes Hayward - W7ZOI. The modifications are included on all circuit boards and kits now being supplied.

As the R1 was originally designed, it was found that the noise figure was higher than expected; the cause was the noise emanating from the

mixer diodes. A general principle of receiver design is that the noise figure of the early stages must be low and the gain high enough to override the noise figure of subsequent stages. But for maximum close-in dynamic range, there must not be too much gain ahead of any bandpass filtering. As originally designed, the noise figure of the R1 was too high. The modification involved increasing the gain of the audio preamplifier, but the increase is limited to 10-dB. so as not to sacrifice much dynamic range. The result is a 5- or 6-dB. improvement in overall noise figure, which is effective on 40- and 30-meter rigs that do not have r.f. preamplifiers. It is not effective on systems that have r.f. preamps nor on 160- or 80-meter rigs.

R2 receivers can be improved by 3- or 4-dB. by replacing the original NE-5514 quad op-amps with T0074 low-noise opamps.

The mini-R2 uses a different design, but also can be improved by replacing the emitter-follower ahead of the phase-shift network with an NE-5532 low-noise op-amp stage. The result is an improvement in the measured 2-tone 3d-order dynamic range to about 96-dB., comparable with the best commercial receivers measured at the ARRL Labs.

LAB NOTES (LN)

Title>LN1:You've Got Questions? Here's How to Find the Answers!
Author>Tracy, Mike - KC1SX
Source>QST Feb 96, pp. 85-86
Abstract>How to find answers to questions arising in amateur radio.

Digest>In this article Mr. Tracy, who is ARRL Technical Information Service (TIS) Coordinator, explains how amateurs can find the answers to questions that arise while they are pursuing their hobby. The TIS is one of the benefits of ARRL membership. Its function is to help members find information they need and want.

A primary function of the service is to locate printed sources of the answers themselves. Many of them are covered in articles in back issues of QST, QEX, and other ARRL publications. TIS can search for articles based on the subject matter, the author, the title, or other criteria. They can be contacted by telephone: (860) 594-0214, or E-mail: tis@arrl.org.

In addition to the magazines, the ARRL also publishes a wide variety of reference books. Most prominent among them are the ARRL HANDBOOK, the ARRL OPERATING MANUAL, and the ARRL ANTENNA BOOK. In addition, a large number of special studies authored by the ARRL staff, members, or other writers, are made available for down-loading via ftp from the Internet; by telephone from the ARRL Hiram Bulletin Board System at (860) 594-0306; or by E-Mail from the ARRL Info-Server. To learn how to access the Info-Server, send a message to info@arrl.org containing only two lines. On the first line of the message, type "HELP" and on the

second line: "QUIT".

For those without computers or modems, the same items can be obtained via US Postal Service by request to the ARRL Technical Department Secretary, 225 Main Street, Newington, CT 06111, for a fee of $2.00 per items for ARRL Members, or $4.00 for non-members.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:Radio Safety for Jump Start
Author>Guillaume, J. B. - N5CPE
Source>QST Feb 96, p. 80
Abstract>Always disconnect radios and amplifiers before connecting jumpers to boost a weak vehicle battery.

Title>HK2:Voice-Activated Transmitter Control of a VHF Mobile Transceiver
Author>Titus, Temp - W4HZV
Source>QST Feb 96, p. 80
Abstract>How to use an Alinco VOX headset with a Yaesu 5200 mobile transceiver. The same approach may work for other transceivers, as well.

Digest>Operating mobile radio for long periods of time with a hand-held microphone is inconvenient, and may be dangerous in traffic. An alternative is a VOX control circuit and headset-mounted microphone. (Check local regulations before driving with headphones).

Mr. Titus provides a schematic diagram and complete instructions for using an Alinco VOX headset to work with a Yaesu 5200 VHF mobile transceiver. He notes that the same approach should work with other VHF units.

Title>HK3:Drill IC-Hole Patterns Easily
Author>Martin, David W. - WA6TYJ
Source>QST Feb 96, p. 80
Abstract>Make a Plexiglas(R) drill guide to use in positioning holes for IC chips in a circuit board. Use a Vector board with 0.1-inch hole spacing as a drill guide to drill the holes in the Plexiglas.

Digest>The tiny etched holes in the centers of IC-pads often do not open properly. When one later drills the hole through the board, it is often difficult to keep the bit from wandering.

WA6TYJ has devised a drilling jig to make it easy to drill precisely located holes. He starts with a piece of 0.1-inch spaced Vector board and tapes it firmly to a piece of 1/8-inch thick Plexiglas(R), or

similar material. Then, using a No. 65 bit, he drills a holes through the Plexiglas beneath each one in the Vector board.

This gives him a drill jig that he can see through, making it easy for him to locate it precisely over an etched circuit board.

Title>HK4:Cure Repeater Audio Feedback in the Yaesu FT-470
Author>Erikson, Wally - WB0LPB
Source>QST Feb 96, p. 80-81
Abstract>Eliminate feedback when using the dual-band rig in cross-band repeat mode, by disabling the audio in the receiver section. Requires only the insertion of a diode; the article gives full instructions.

Digest>When the Yaesu FT-470 dual-band transceiver is used in cross-band repeat mode, and the associated mobile radio is operating in the "access-assist" mode, acoustic feedback will occur directly from the speaker to the mike. This is because, in that mode, transmitted signal from the FT-470 is sent to the repeater through the mobile radio, but the received signal comes directly from the repeater.

The most straightforward way of eliminating the feedback is to disable the receive audio when the transceiver is transmitting. To accomplish this, a 1N5817 diode should be inserted between the audio amplifier and the push-to-talk (PTT) switch in the FT-470.

A pictorial diagram is included showing that convenient hook-up points for the diode are on the leads to capacitors C3065 and C1060.

Title>HK5:Build Refined-Latching Relays
Author>Edwards, A. W. - K5CN
Source>QST Feb 96, p. 81
Abstract>How any d.c. relay can be made a latching type. The circuit uses two diodes and two push-buttons; one to close, the other to open, the relay.

Digest>Any d.c. relay can be made a latching type with the addition of two diodes and two push-button switches, one normally open (NO) and the other normally closed (NC). K5CN provides a schematic diagram showing how this is done.

One of the diodes is connected across the relay coil to short the inductive kick when the circuit is broken. The other is wired in series with the coil so that, in case the same power supply is used to operate the relay that also supplies current to a load, the series diode keeps the load current from flowing through the coil. The NO switch actuates the relay and the NC one resets it.

Title>HK5:CPU Reset Cures Kenwood Radio Memory Problem
Author>Vincent, Tom - N2AYF
Source>QST Feb 96, p. 81

Abstract>The Kenwood TM-631 often loses its memory. To restore it, one need only reset the CPU.

Digest>N2AYF owns a Kenwood TM-631 that contains a 5-year lithium battery to maintain the memory. After only about 2-years of operation, he found that the memory would reset every day or two. Thinking that the battery was defective, he installed a new one but the condition persisted.

He found that resetting the CPU solved the problem completely. One accomplishes this by depressing the MR key when turning on the radio.

FEEDBACK (FB)

Title>FB1:"Airborne Amateur Television", QST Nov 95
Author>Berkman, Ronald - KA9CAP
Source>QST Feb 96, p. 81
Abstract>The telephone number listed for Micro Video Products is no longer in service and no new number has been found. That for Super Circuits has been changed to: (512) 260-0333.

Title>FB2:"The 4-Way DFer", QST Nov 95
Author>Mallette, Malcolm C. - WA9BVS
Source>QST Feb 96, p. 81
Abstract>In the caption for Figure 2, delete any reference to R34, R36, R37, and R46. The correct value for R46 is, as shown in the schematic, 1000-ohms.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Feb 96, pp. 59-60
Abstract>Questions and answers on subjects of primary interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: trouble-shooting an old Hallicrafters SR-400A transceiver; adapting an ICOM electret microphone to a Kenwood transceiver; the correct formula for calculating SWR; what mode and band to use in frequent communication between California and Illinois; optimum equipment for operating 6-meters; operating practices on FM repeaters; the use of insulated wire for antennas; and other items.

Title>NHC2:Elementary Students "Adopt-a-Ham"
Author>DiGennaro, Paula P. - KA8HQJ
Source>QST Feb 96, p. 61

Abstract>A grade-school program gives children the opportunity to talk on radio with an adult ham. It is found to benefit shy children; it is also gratifying to the adults.

Digest>Grade-school teachers have discovered that shy children can develop language skills by talking with adults via radio. Mike Fisher - N8XVF, a fourth grade teacher in Beavercreek, Ohio, organized a program in which a group of hams volunteered to carry on weekly schedules for 15-minutes over a six-week period. Each ham was assigned to talk with four children.

The author was one of the participants in the program and found it to be thoroughly enjoyable. In the opinions of their teachers, the children benefited from it; they also enjoyed it, and several became very interested in amateur radio through it.

Title>NHC3:Surf the Ham Webs!
Author>Ford, Steve - WB8IMY
Source>QST Feb 96, pp. 62-64
Abstract>A guide to some of the resources on the Internet World Wide Web of interest to radio amateurs.

Digest>Among the many ways that the Internet communications network is being used, the most popular is the World Wide Web, which combines text and graphics and allows participants to establish their own "web pages", if they so desire. These are like bulletin boards, with pictures, and anyone is free to post anything they might choose, for all to see. They are being established by individuals, as well as companies ranging from small business to major corporations.

The article describes a number of pages of interest to radio amateurs. Among them are the pages maintained by the ARRL, the Radio Amateurs of Canada (RAC), the Bay Area DXers (Traverse City, Michigan), AMSAT, and many others.

Title>NHC4:Four Bands, Off-Center
Author>Wright, Bill - G0FAH
Source>QST Feb 96, p.65
Abstract>Dimensions and construction details of a dipole that works 40-, 20-, 15-, and 10-meter bands without an antenna tuner. But the 15-meter band requires a different balun from that for the other three.

Digest>G0FAH illustrates an off-center fed dipole that works four bands without an antenna tuner. It is 69-feet (21.0-m.) long, fed at a point 23-feet (7.0-m.) from one end by 300- or 450-ohm ladder line. The line is cut to a length representing an odd multiple of quarter-wavelengths on 21-MHz. The author recommends either 55-feet (16.8-m.) or 111-feet (33.8-m.) of 450-ohm line; or either 50-feet (15.2-m.) or 110-feet (33.5-m.) of 300-ohm line. Any of these will present an impedance at the feed end near 300-ohms on the 40-, 20-, and 10-meter bands, and 50-ohms

on 15-meters.

For use on 40-, 20-, and 10-meters, a 4:1 balun is attached to the end of the ladder-line and 50-ohm coax run from there to the radio. When operating on 15-meters, one should change to a 1:1 balun.

The author has his dipole at approximately 40-foot (12.2-m.) height from the ground and finds that the SWR never exceeds 2:1 on any of the four bands.

Title>NHC5:Build a Quickie H-T Antenna Mount
Author>Ardai, Michael L. - N1IST
Source>QST Feb 96, p. 66
Abstract>How to make a convenient mount for a whip antenna from a conventional, ductile-iron C-clamp and a UG-492 dual-BNC connector.

Digest>When one is using a hand-held transceiver (H-T), it often becomes desirable to substitute a larger whip antenna for the "rubber duckie". To hold such antenna, it is handy to have a clamp so that it can be firmly attached to some stable support. N1IST fabricated such a mount from a conventional ductile-iron C-clamp.

He drilled two bolt holes through the top arm of the "C" and bolted on it a small L-shaped bracket, bent from 1/16th-inch aluminum sheet. A half-inch diameter hole is drilled in the bracket and a UG-492 dual-BNC chassis-mount connector inserted. In use, the C-clamp is tightened onto a window ledge, railing, or other convenient support and the antenna plugged into the connector, which has ample strength to hold it upright.

Title>NHC6:Chain Saw Required?
Author>Murphy, Dan - KA1SZP
Source>QST Feb 96, pp. 67-68
Abstract>Convenient ways to run coax feedlines through an outside wall of a building.

Digest>In this article, KA1SZP addresses the question of how to run coax cable feedlines through the walls of buildings. One of the most convenient ways is to replace a piece of window glass with a plywood or Plexiglas(R) panel, then run the cables through holes bored in the panel, or else use panel connectors on both sides of it. Alternatively, if the window sash is the type that opens by sliding upward within the casement, the holes can be made in a narrow board cut to a length that just fits inside the casement under the window. The board is inserted and held in place by the window closed on it.

Title>NHC7:On-Air Conversations - Go Beyond the Basics
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Feb 96, pp. 69-70
Abstract>Don't limit QSOs to signal report, QTH, and name. How to encourage conversation.

Digest>Mr. Kleinschmidt addresses the common complaint that too many QSOs are of the contest type: limited to an exchange of signal report, QTH, and name. The author suggests that one might try to engage the other ham in a bit of conversation. Often, the other person is equally desirous of more friendly exchange, but shy about initiating it. So, one should "throw out a tidbit" to see if the other takes up the "bait". Often, a considerable conversation will ensue.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The Illa Tiki Expedition
Author>Haslett, John - KC5KHA
Source>QST Feb 96, pp. 28-30
Abstract>Story of an abortive attempt to sail a balsa raft from Ecuador to Hawaii. How it was saved from disaster only through ham radio.

Digest>This is a story of an attempt by a small group of people led by the author to sail a balsa raft from Equador to Hawaii. Fortunately, apparently as something of an afterthought, the author decided get an amateur license and take a transceiver along.

The voyage was a failure and barely escaped being a disaster only because of the radio. The raft was practically uncontrollable and, judging from the information in the article, it must not have had a keel worthy of the name. Instead of sailing west, it floated northward and eventually reached an anchorage in Panama. There, the balsa quickly became infested with marine worms that, in a very short time, almost consumed the logs.

The only favorable result of the entire project was that the author became an enthusiastic ham.

Title>GI2:VE1ZZ - A "Ham's Ham"
Author>Cain, James D. - K1TN
Source>QST Feb 96, p. 31
Abstract>Story of Jack Leahy - VE1ZZ, and his ham radio operations.

Digest>Jack Leahy - VE1ZZ, operates from his home just outside Halifax, Nova Scotia. His home is close to salt water in almost all directions. By "scrounging" and through ingenuity, he has built a powerful array of antenna towers and antennas largely from scrap material.

He works DX on all bands from 6- to 160-meters. On the latter band, he has worked 264 DXCC countries. The article contains a number of photographs illustrating his shack and some of the antennas.

Title>GI3:A Father's Tale
Author>Murphy, Jim - AA0JG
Source>QST Feb 96, p. 46
Abstract>This is a story describing the reactions of a father as he

coached his 10-year-old daughter on the fundamentals of ham radio, and his nervousness when he took her to the license examination.

Title>GI4:Studying for My License
Author>Murphy, Sarah - KB0NZR
Source>QST Feb 96, p. 47
Abstract>A girl, now 11, tells her own version of the story told by her father in the preceeding article.

Title>GI5:The W6VX Logs - An Autobiography
Author>Laidman, Harvey S. - N6HL
Source>QST Feb 96, pp. 48-52
Abstract>David Atkins - W6VX, an active ham from 1922 until his death in 1994, kept a continuous radio log, and inserted general news, as well. In the end, it became an autobiography. This article describes it.

Title>GI6:It's a Small World for Hams
Author>Thoss, Guenter - DF5OL
Source>QST Feb 96, p. 53
Abstract>The story of a long voyage on a merchant ship taken by a ham. He operated his ham radio enroute and met many hams, both on radio and in person when the ship stopped in ports.

Digest>The container ship sailed from Hamburg, Germany in October, 1994 for a trip to Rotterdam, La Spezia, Suez, Melbourne, Sydney, back to Melbourne, Fremantle, Suez, La Spezia, Zeebruegge, Tilbury, and back to Hamburg. Aboard the vessel, the author had a Kenwood TS-50 transceiver and a 23-foot trap dipole for 10-, 15-, and 20-meters, which he strung between the second and fifth decks.

During his long voyage, he made many QSOs with hams he had contacted before, and also met personally with other radio friends as the ship visited the various ports. In this article, he describes many of these instances.

Is removing the tank a problem when you try it on your back? Or would it
be easier if the car/truck were over a pit so that you can stand up and
get at it?

I recommend that the Ford filter be
>used since the assembly is submerged in the fuel.
>

Do you mean that the filter should be replaced before re-installing back?

>anyway it works very well.

KAWIN NEWS

KaWin 6.37 is ready for download! Minor changes to the help file too.

The big news in version 6.37 will be a big yawn to registered KaWin users, but I'm hoping it will lighten the flames that periodically decorate my screen. ;-)

It starts with a new, kinder and gentler, nag meter. The new meter does not start running until the first time data is "sent" from KaWin. That means a prospective user can monitor indefinitely and explore the menus and features without the anxiety of that nasty old nag meter. Once it starts running, the new nag meter is purely time based, and visible, right at the top of the screen.

So, if you know someone who just couldn't get past the old nag meter to thoroughly evaluate KaWin, now's the time to try again.

Another assist for new users is an operator alert at program exit if a TNC that was opened in terminal mode is about to be closed in host mode. Host mode close remains the default - and, for good reason - but, TNC users who are new to host mode have been righteously incensed when their TNC fails to respond to their old terminal mode program after exiting from KaWin. This new feature should help.

Finally, KaWin has long been able to preserve the HF mode of a Kam from session to session as long as the Kam is not powered off, or if the Kam was closed in terminal mode. Now, that same capability has been extended to Host Mode close - even if the Kam is powered off between sessions.

All currently reported bugs are fixed in 6.37.

To add to the KaWin News mailing list, send email to stan@mutadv.com with the word SUBSCRIBE in the subject line, or use the handy subscription link on the KaWin Home Page. To be removed from the list, send email to stan@mutadv.com with the word UNSUBSCRIBE in the subject line and be sure to include the email address this message was sent to in the body. I cannot remove you if I don't know your address!

But more to the point is to remember that the body politic elects representatives to make necessary decisions because approval of each initiative by the body is unworkable. The idea of always taking a poll to determine the wishes and the wants of that body is good politics, but bad government. Leadership, on occasion, is demanded and there are instances when the leaders of a nation or a club must strike out to blaze the trail. If the resultant decision was a bad one, then the body politic will have the miscreants removed. The alternative is referendum after referendum which only gives a snapshot of the opinion at that moment of time, and does not really give any indications as to the shades of meanings that are present in the undercurrent of opinions by the body. To emphasize my analogy, it is rarely prudent to determine in which direction the herd is stampeding resulting from a panic reaction. Better still to provide the leadership to nudge them in a direction so that they do not go over the cliff.

Obviously, when the ARRL made their pitch for a no-code ticket to limit these amateurs to 220 and above, their proposal had less merit than those who objected to their proposal. I suspect that the "220 and above" was a sop to those who wanted no truck or trade with no-code licensees and figured that they should be stranded up there where they would have not bothered anybody. On the other hand there were those who objected to such marooning of these individuals because the no-code licensees would not have had the opportunity to be socialized within the norms of the

current operating practises and procedures. Although there are some who would say that 2 metres, where most no-code amateurs hang out, is a wasteland, I suspect that the foundations of that desertification was laid a long time before the appearance of the no-code amateurs. More to the point, I suspect that it is the "coded" amateurs who have been negligent in their lack of guidance to these individuals, particularly in their own poor operating habits, if not downright mean and nasty to the new amateurs.

The colallary to this would be that the no-code crowd would have developed their own systems and procedures such that when the old-timers felt it was necessary to migrate to these bands, they would be in for a rude shock because then they would not be on their own turf, but the that of the no-code types. The collision of philosophies and their outcomes would have been interesting to observe. But this is all moot now....

Finally, I do not understand Briancomano's beef with the ARRL BoD in this issue anyways because the final decision is left to the FCC, not the ARRL. Since the final outcome was not in accordance with the ARRL's submission, at least the darts should be aimed at the appropriate target.

Probably requires a CTCSS subaudible tone to be transmited to allow the
repeater to key up.

Try calling on 146.52 simplex to see if someone can help you...

The offsets are 600khz +- offsets, try checking that also...

Charles:

Your local observations are not unique. Unfortunately, the FCC has not been open to further clarification of, or modification or limitations to the existing Physician's Certification process. They modified the Form 610 in 1993 to further ensure that Physicians have read the FCC's instructions and that the Physician has considered ALL accommodations and determined that the patient cannot pass thew higher speed Morse code test, even when using the accommodations.

What the FCC does invite is documented cases of abuse. This is the only means they make available to address possible abuses to the Physician's Certification process.

If you have information about possible abuses, forward that information to the FCC. The FCC requires first hand, factual information which may bring into question the merits of a Physician's Certification. Cases must be individually addressed. Send your information, in letter form, with signature, to:

FCC
1270 Fairfield Rd
Gettysburg PA 17325-7245

Or by fax to 717-337-1541

The FCC does not normally treat these letters as "confidential."

73,

Bart

>What's going on?

Equipment nowadays is based largely on subsystem ICs and hybrid
modules, so the knowledge required is oriented more to the subsystem
level. The smallest active "component" may contain thousands of active
devices. You still have to know something about LC circuits and other
passive networks, and may need some individual device knowledge for
things like PIN diode switches, but basic troubleshooting is now
pretty much finding the bad module and replacing it. Little or no
calibration is needed or possible since everything is pretty much
digitally synthesized. It either works, or it doesn't.

>Do I recall correctly that the FCC First Class test was renamed to
>something else a while back? Has this test changed much? That is,
>are the questions much different than the ones shown for the various
>commercial license elements in Shrader's book?

The FCC First Class Radiotelephone license is gone. That license,
and the Second Class Radiotelephone license, were replaced by the
General Radiotelephone license. But the FCC eventually got out of

the commercial testing business altogether, and now there's a private firm doing certification exams, and the SBE also gives certification exams. For most (all?) purposes, these certificates are now unnecessary. They're like a diploma now, an aid to getting your foot in the door to get a job, but not required. For example, broadcast stations no longer require a licensed operator. Proper operation is solely the station licensee's responsibility now, and he can hire anyone he wants to keep him in compliance. He must designate someone chief operator, but that person need not hold a license.

The First and Second class Radiotelegraph licenses were only needed for shipboard operators (and you couldn't get a First without an apprenticeship as a Second class shipboard operator). That's changed (or is changing) too. I believe these exams are also now given privately, though a licensed operator won't be required on any ship after 1998, and isn't required now on ships already equipped with the new digital satellite communications system. The Coast Guard has shut down the CW maritime watch, and the only Morse traffic left is with a few commercial shore stations still servicing ships which haven't upgraded their radio equipment yet (they'll have to upgrade by 1998).

The technology has changed so much that a licensed operator is no longer a necessity. For example our new Harris Platinum series transmitter has 30 PA modules in parallel. When one fails, the green LED on the front changes to red, and we just pull it out and plug in a spare when we get around to it. There's no downtime, the transmitter can still make licensed power with several modules down. Exciters, modulators, and control systems are also redundant and self-diagnostic. There's very little for a licensed operator to do. Component level servicing is pretty much a thing of the past. The manufacturers offer a module exchange program for dealing with failed modules that's more economic than maintaining an in-house component level repair capability. It doesn't require a license to tell a red LED from a green one.

You waited too long and missed your chance for one of the old First class commercial licenses. They're pretty much a thing of the past, along with the jobs the licenses permitted you to hold. We've cut our engineering staff from 28 to 5 because we no longer need their skills frequently enough to justify keeping 28 of them on the payroll. Today's equipment is just too reliable and too automatic to justify keeping an operator or tech hovering over it all the time.

Thank you Rodney. As an ex-Tandy guy with ten years in these guys
assume every thing I say is like being a homer. I was never
discouraged to hire electronics students, hams, etc. As a matter of
fact I was recruited at tech school!!! Your friend, Mr. Graham, has
done you a dis-service by telling you a lie. I know, I spent all of my
career opening stores in CLE which is where you are from acording to
your freenet address. I left because I switched to the business
products division which was disolved. Fortunately they had sent me to
several schools and trainings to prepare me to leave. (Kind of kills
two misrepresentations being spread about by a bunch of restless
college kids doesn't it!!)

Not sure just what your problem is Matt! I haven't the faintest idea where the greater Hampton Roads area is, or for that matter even what state it is located in. Please bear in mind that you are posting a QUESTION to the newsgourp. If people don't have an answer to your question, then chances are that you won't get much of a response. No need to develope an attitude that everyone is down on you cause you have decided to take a No Code Tech test. What class of license you wish to attain is entirely up to you. It all depends on what aspects of the hobby you have an interest in (Sat's, RTTY, CW, SSB, FM, SSTV, FSTV, HF, VHF, UHF, etc.). Different strokes for different folks.

Like I said, I haven't the faintest where the greater Hampton Roads area is, but obviously from your signature line you have two wheels and an interest in performance bikes. If Summer EVER returns to Minnesota, I'll be out on my "90" ZX-11 instead of workin DX on 160 Meters. Wanna ride?

: Tim, KF6BVU

Tim, there are other countries where you can operate with a reciprocal
license but most require arrangements be made ahead of time. The only
places where you can 'show up' and operate are U.S. territories, i.e.,
the U.S. Virgin Islands, Guam, etc. Best place to check for a list
of countries/proceedures would be the ARRL.

My apologies, I fired off my mouth before my brain was engaged. It has
been pointed out to me that my original post may very well not have made
it outside our company's servers. I should have checked that out before I
indicted the newsgroup as a whole. For that I am sorry. But I am really
tired of the code/no-code threads ;-)

Operating in Canada does not require any prior arrangement. You can
indeed show up and operate. Last I looked though, Canada was not all
that close to the Bahamas, so that is not all that helpful for your
current trip.

4713. Getting back into HF - what band do you suggest?

Hi. I have been out of HF ham radio for years, and I'm thinking of putting up an inverted V for one of the bands. Any suggestions on what band I should select for evening use? I don't much care whether I'm speaking mostly to US hams or others as far as distance is concerned. Thank you for your input in advance.

-->I'm thinking about ARRL insurance. Any experience with it (claims)?
-->I don't have too much stuff -- just a few FM radios for voice and
-->computer networking. But, I lost a handheld last year while hiking!
-->An Alinco DJ-580T! I'll certainly tether my HT nicely while hiking
-->from now on, but a friend said that ARRL insurance covers accidently
-->like that, so I'm interested.

My experience was great. Had a dual band mobile and HT stolen from
my truck about 2 years ago. Had a check for ~$1,200 about a week after
they received my Police Report.

One thing to keep in mind. You only get the amount of money you claim
the item is worth. It is not really replacement coverage. In other words,
if your 3 year old dual band mobile is ripped off, you get what you itemized
it for, not what it costs to buy a new one. I update my itemization every
year. ($50 deductible applies).

So if you want to get $700 for that dual band radio if it is ripped off,
you need to insure it for $750. That costs 7.5 * $1.50 = $10.50/year.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 APRIL AND FORECAST FOR 04 APRIL - 06 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 02 Apr
Daily Proton Fluence >1 MeV: 2.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.5E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Apr 05 Apr 06 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Apr: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 02 Apr
Learmonth 7 1212 2322
Fredericksburg 5 4
Planetary 5 3

Observed Kp for 02 Apr: 1111 1112

2B. MAGNETIC FORECAST
Date Ap Conditions
04 Apr 7 Quiet to unsettled
05 Apr 8 Quiet to unsettled
06 Apr 12 Unsettled
COMMENT: Recurrence indicates a disturbance starting on the 7
April.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
03 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
04 Apr Normal Normal Normal
05 Apr Normal Normal Normal
06 Apr Normal Normal Fair
COMMENT: Recurrence indicates a disturbance starting on the 7
April.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
03 Apr 8

Observed Australian Regional MUFs:
Darwin: Near to 15% depressed.
Townsville: Near to 15% depressed.
Sydney: Near predicted monthly values.
Hobart: Near predicted monthly values.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
04 Apr 10 near predicted monthly values
05 Apr 5 near predicted monthly values
06 Apr 5 about 10% below predicted monthly values
COMMENT: Recurrence indicates a disturbance starting on the 7
April. Degraded conditions expected for high latitude circuits.

>
>Try calling on 146.52 simplex to see if someone can help you...

On an HT, and in some areas without a lot of simplex activity, he may
not be able to raise anyone.

>The offsets are 600khz +- offsets, try checking that also...

Yes, you need to make sure you're transmitting on the correct input
frequency for the repeater you want. In most areas your transmitter
needs to drop down 600 kHz if you are listening on 145.xx or 146.xx
but your transmitter needs to jump up 600 kHz if you are listening
on 147.xx.

If you are getting squelched because you're not sending the proper
PL tone (CTCSS), you can sometimes get in on the squelch tail of the
previous person's transmission. If you wait until someone on the
repeater stops transmitting, then quickly send your call sign, the
local folks on the machine will realize that someone is trying to
get in, and will come back and tell you which tone is needed.

Or you could try the ARRL Repeater Directory; most areas have a "standard"
PL frequency which is used for all open machines.

Another tactic is to make your query on the repeater's output frequency,
but on an HT I don't think this will be very effective.

Another thing you can try is to find a machine that doesn't require a
PL and ask on that machine what the standard frequency is for your area.
Usually there is at least one machine out there that you can bring up
without PL.

We had a gentleman show up at our VE testing session last month with a waiver. He had passed all code/theory elements except 1C, for which he had the waiver.

One of our OT Extras, himself a VE, sternly challenged this individual. While I can understand that there will always be those who are ready to abuse any well-intentioned accommodation, talking with this gentleman satisfied me that he was not trying to sidestep the requirement. He said that he had hit a plateau at 17 wpm, and sought the advice of an audiologist when he could progress no farther. He was told that he would need a hearing aid within two years.

I am glad to see that there is an avenue to report suspected abuse.

At first, I had trouble understanding the reason that anyone would want the Extra ticket if not to work CW, since there is only a 25 kHz gain in the 80, 20 and 15 m voice subbands. I suppose anyone would like the prestige of attaining the top class of license.

BTW, one lesson I learned from this experience was to remember to *charge* the individual the usual examination fee.

4721. ALT.HAM-RADIO.....? Why Duplication?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-03 00:00:00 UTC
From: rongross@netcom.com
Message-ID: <rongrossDpB7oB.DA9@netcom.com>
Source record: 228344

I just notices 22 new groups with the prefix alt.ham-radio. .... This seems to be a bit ambiguous even though it allows for more breakdown of areas of interest. As of now, most are empty. Is the intention to migrate all of the rec.radio.amateur.... stuff over there? Personally it seems that amateur radio is more recreation than alternate lifestyle. Maybe the whole thing needs to be re-thought. I sure wish the 8,000 or so truly worthless and empty groups could be eliminated...talk about a wast of resources.

Hi Larry,
Like you I'am also a 30 meter nut, though not as active now as
I used to be. At the moment I have a full-wave delta loop fed vertically
with a quater wave 75 ohm matching section. It works very well from this
location, which is about one mile from the ocean on the north coast of
Northern Ireland. Rig is a Kenwood TS-870S, and I can knock in a H/B amp
if needed. Maybe run across you on the band one day !

Sorry...you won't find code practice on CD.....I had to use tapes.

But if you don't have/want tapes...you could try one of those random code generators..looks like a small radio and works quite well...get one with an LCD screen so you can check yourself.

just my two cents!

Howdy,

Now there's this bunch of no-code techs telling us that you can't call CQ anymore. My advice to you is to just ignore these archaic calls and let the caller be answered by someone who knows what it means.

My favorite is the person who answers your CQ with, "How can I help you?"

My reply is, "You can mow my yard, rotate my tires, and loan me some money."

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 APRIL AND FORECAST FOR 05 APRIL - 07 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 03 Apr
Daily Proton Fluence >1 MeV: 7.8E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 7.5E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Apr 06 Apr 07 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Mainly quiet, active 13-17UT.

Estimated Indices : A K Observed A Index 03 Apr
Learmonth 11 2222 4412
Fredericksburg 10 7
Planetary 5 4

Observed Kp for 03 Apr: 1001 2212

2B. MAGNETIC FORECAST
Date Ap Conditions
05 Apr 7 Quiet to unsettled
06 Apr 9 Unsettled
07 Apr 20 Active
COMMENT: IPS Geomagnetic Warning 6 was issued on 4 April and
is current for interval 7-10 April.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
04 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
05 Apr Normal Normal Normal
06 Apr Normal Normal Normal-fair
07 Apr Normal Normal-fair Fair-poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
04 Apr 18

Observed Australian Regional MUFs:
Darwin: Not available.
Townsville: Near predicted monthly values.
Sydney: Near predicted monthly values.
Hobart: Near predicted monthly values.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
05 Apr 0 5 to 15% below predicted monthly values
06 Apr 5 about 10% below predicted monthly values
07 Apr 0 about 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 4 April
and is current for interval 8-10 April.

4728. Glass Mounted Mobile Antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: danned@bright.net
Message-ID: <316334e9.51955981@news.bright.net>
Source record: 228252

Hi!

I have been told that the antennas you can mount on the glass of your automobile will not work if the glass is tinted. Something about the use of aluminum in the process of tinting the glass. Can anyone fill me in on this possibility?

If that is the case does anyone have any suggestions on what I might be able to use on a new 1996 Dodge Caravan. I want to stay away from a magnetic mount. The mounts still leave scratches.

Thanks!

So far RS has been given a bad wrap here on the newsgroup.
There are a few guys abd gals that are really nice and help
with problems, but the few idiots that are out there give
you "good" RS salepersons a bad name.

For example, I came in RS one day to see what new items
had come in and to see if there were any out dated items
on sale. Since I am still in college, I asked a few buddies
if they would like to come too. So as wee looked around
the store, the salesidiot whispered to the other, "these
fools have nothing else to do but come here on a Friday
and hang out." I was steamed because I was going to
buy a mini CB (50 milliwatt) for my nephews. To my
anger, I didn't buy it! I went to another store.
(Sagamore Pkw, West Lafayette, IN)

Another instance, a RS on Collisium Blvd. , Fort Wayne, IN.
I bought a car stereo that was on sale (new). The radio
worked fine on tuner mode, but when I played the tape,
the right side did not work. I tried multiple tapes, but
still the same. My conclusion=it is broken. When I went to
return the radio, the salesjerk said, "so did you cut the
wires and then resolder it to look new?" (sarcastically said).
That insulted my intelligence. The guy accused me of cutting
the wire so that I could not return it. The policy is that if
you cut the wires, then you have to keep it and they will only
repair it.

So the lesson is know your RS people and go back to the ones
that treat you nicely and stay away from the jerks!
RS products are ok, but then aain buyer beware.

4730. ICOM 706 DC Power Plug Availability?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: radke@radke.seanet.com
Message-ID: <radke-0106962005440001@radke.seanet.com>
Source record: 228254

I have been looking for a source for 706 12 volt connectors so that I can make up some extra power cords, but to no avail. The plug apparently comes from a Japanese supplier (JST). I located thier distributer here in Seattle, but their catalogue does not show the connector used on the 706.

Has anyone out there been successful in locating a source for these connectors? Of course the local dealer will sell me an ICOM DC power cord for $23.00.

4735. GPS Engine Group Purchase

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: Greg Jones <wd5ivd@tapr.org>
Message-ID: <4jv4nr$jbm@uunews.computize.com>
Source record: 228259

TAPR offers group GPS purchase 4/1/96

TAPR working with Bob Bruninga, WB4APR, will be making a group purchase
on
Garmin 20 GPS units.

For full details on the purchase as well as information regarding the
unit,
please see the following web page http://www.tapr.org/gps

The price will be:
$165.00 US for members of TAPR
or
$175.00 US for non-members

This kit will include:
* Garmin GPS-20 (MultiTrac8 sensor) engine (1.83" x 2.74" x .45")
The Garmin GPS-20 is similar to the Garmin GPS-45

* RF pig tail with connector for unit
(one end is the MCX male connector
and the other end will be non-connected - see below)

* power/data cable with connector shell and pins
(The connector is a subminiature PCB edge connector
and will need to be built - see below)

* Documentation

TAPR will be taking orders for 50 units, which is the minimum purchase.
Once 50 units have been purchased TAPR will order the Garmin units.
TAPR will deposit money when the units are ordered from Garmin and ship
when the units arrive from Garmin. It is expected that the demand will
be high, thus a short period should be required to receive the 50 orders.

Please note: This is not an enclosed/sealed unit. It is assumed that
the purchasers will be installing the unit in another enclosure for normal
and/or experimental operations.

No 10% Discount for TAPR Members. Due to the nature of the purchase,
the $165 purchase price for TAPR members represents the membership
discount.

If you would like to order one of these units, you can
e-mail tapr@tapr.org,
phone (817) 383-0000, or
fax (817) 566-2544.

Office Hours: Tuesday - Friday 9am - 12pm, 3pm - 5pm Central Time

These units will be useful with current APRS software and the upcoming TAC
(Totally Accurate Clock) kit that Tom Clark, W3IWI, has begun discussing with TAPR to do as a kit in the future. For more on the TAC project check: ftp://aleph.gsfc.nasa.gov/GPS/totally.accurate.clock/

Questions concerning the unit and details on the buy will be handled on the TAPR APRS Special Interest Group list. To subscribe,
send e-mail to:
listserv@tapr.org.
In the message type
subscribe aprssig YourFirstName YourLastName.
The server will then send you a message back. Announcements on the status of the shipment will be made to the TAPR APRS SIG and TAPR-BB lists.

Shipping and Handling
---
* Shipping and Handling within the US will be $7.00 US
by UPS Ground unless otherwise requested by purchaser.

* International Shipping will need to contact the TAPR office and get a quote on the shipping to your country. TAPR uses International Express Mail, unless the purchaser requires something else.

Maybe he doesn't...

Ron, Many newsreaders have a facility where you can add a list of keywords or phrases to a file associated with a specific newsgroup. This list will be used to skip or discard topics or threads containing those keyword and phrases. Not as good as keeping uncivilised and uncouth individuals out of the newsgroup, but its better than nothing.

In my opinion, posting topics with title like the one in question to a public newsgroup (especially one whose topic is clearly technical and hobby oriented and not controversial in nature), is the same as going to a public place like your local shopping mall and shouting those words.

I would like to see the original writer of the topic, go to the shopping mall and repeatedly shout the topic of his note and see how long his free speach rights keep him from getting arrested or booted...

>73 DE KE6WEO
>--

Yes. There's a Windows/Windows95 logging program called DX4WIN that
has the capability to announce DX cluster spots in audio. It s a very
comprehensive and powerful program. Unfortunately, it's pretty new to
the market, so it's not yet well known. If you want more details, drop
me a line.

- Darrell (NR3Y)

...and no, I don't have a commerical stake in the program.

4740. HF doesn't suck

Newsgroup: rec.radio.amateur.misc

Source record: 228264

Howdy,

HF doesn't suck, two meters sucks. It's the CB band of the nineties.

If you think all they talk about is wx, rig, location, then you have missed a lot.

If HF sucks, how can you explain the one-hour QSO I had with Roger in the Netherlands? We talked about a large number of topics, not the least of which was the racing career of (I can't spell this) A. Luyendyck.

Oh yes those 2-m fm contacts are really interesting:

* Wait, Joe, while I change battery packs.
* Do you want to me to go to high power?
* Oops, I had the wrong offset, sorry.
* I put up a new antenna yesterday, it's a mag mount stuck to the refrigerator.
* The repeater has been down for a week, so I haven't been able to get on the air.
* Well here I am at the work twenty.
* Heard a guy call CQ a while ago. I wonder what he wanted.
* It's starting to rain here now.
* Try it again. I'm here at my hot spot.
* You're a little scratchy. Adjust your squelch.

Oh, well. That's the nice thing about this hobby, there's something for everyone. 10-4

In response to Jim Cummings, who writes:
>But more to the point is to remember that the body politic
>elects representatives to make necessary decisions because
>approval of each initiative by the body is unworkable. The idea
>of always taking a poll to determine the wishes and the wants of
>that body is good politics, but bad government.

Unworkable and bad government for the elected representatives
to vote away their power, perhaps, but that is about all.
A major purpose of representative government, as initially
constructed in the 1700s, was to deal with the problem of
how the masses might travel to the country's state or federal
capital to register their votes. In short, it just wasn't
practical for everyone to cast a vote in this way. The
elected representative was the result.

Today, casting mass votes IS practical. Electronically
is one way. And from a strictly democratic viewpoint, it's one
reason why more and more states are enacting "initiative and
referendum" laws. So, from the "voting at a distance"
standpoint, there's technically no longer a need for an
elected representative to vote on behalf of the people.

With respect to no-code, polling membership for a MAJOR
decision that would affect the purpose and scope of the
Amateur Service was the least ARRL could have done.
Various polls in fact were taken locally, and the
ARRL proposal was defeated in most parts of the country.
But not ONE of the polls was binding! Given all this,
it's fairly clear from the history of this problem
that the no-code proposal was going to be rammed through.
Let us not confuse "unworkable and bad government" voting
arrangements with the bottom line of this issue.

>Leadership, on occasion, is demanded and there are instances
>when the leaders of a nation or a club must strike out
>to blaze the trail.

True enough, but besides blazing a trail, they may also
burn theirs and our t(r)ails behind them. Elected
representatives are people, no more or less, and they
do not always know the answer to a problem, nor do they
always vote the will of the masses. From that standpoint,
it can be said that ONE MAN's decision takes precedence
in the present arrangement, and the resulting decision
may be wrong. That's far worse than a binding referendum.

>If the resultant decision was a bad one, then the body
>politic will have the miscreants removed.

The flaw in that logic is that by that time, the damage
has been done. And as I have mentioned previously, no
major decision making policy regarding the Amateur Radio
Service to restore standards has EVER been made in the
history of the Service. That's because efforts to restore
standards in areas even unrelated to amateur radio generally
come up against "Constitutional Rights" activists. In our
system, once that barn door opens, it doesn't close again.

The bottom line is that, after all is said and done, the
decision to bring on a no-code VHF license was a done deal
from the start. Indeed, VHF no-code as an entry form of
license may have had its benefits. The issue here, however,
was concern that easing of requirements in this way would
permeate the Amateur Service in time....and VHF no-code
appears to be doing that.

>Obviously, when the ARRL made their pitch for a no-code ticket
>to limit these amateurs to 220 and above, their proposal had
>less merit than those who objected to their proposal. I suspect
>that the "220 and above" was a sop to those who wanted no truck
>or trade with no-code licensees and figured that they should be
>stranded up there where they would have not bothered anybody.

Your "suspicions" bear no weight in this discussion. The
fact is that former PRB Chief Foosaner essentially stated in
1984 that a no-code license was coming, and ARRL better go
along with it.

>...the final decision is left to the FCC, not the ARRL.

It is difficult to predict WHAT FCC would have done if ARRL had
called in FCC's bluff and turned out their proposal outright. But
the indication is that the final decision would have been ARRL's,
if we are to believe FCC's stock-in-trade remarks in a multitude
of their Reports and Order! To paraphrase FCC's statement:

"Our conclusion (to grant or deny a given petition) is based
on the views that Amateurs have shared with us over the years,
generally in a rule making context."

Translation: FCC generally goes along with amateur views, i.e.,
the representative Amateur views expressed by the ARRL. So
one can't say by any stretch of the imagination that ARRL
was "powerless" in this situation.

Vince comments:

>There is likely to be an even larger gap between those
>in the Amateur Service when and if a no-code HF license
>becomes law.

Two points:

1) This "gap" is self imposed.
2) It is rarely observed on the air, but permeates cyberspace.
(Maybe it's a "cyber" gap and not a "real" gap.)

In article <316334e9.51955981@news.bright.net> danned@bright.net (David Danneberger) writes:
>I have been told that the antennas you can mount on the glass of your
>automobile will not work if the glass is tinted. Something about the
>use of aluminum in the process of tinting the glass. Can anyone fill
>me in on this possibility?

Yeah, most tints are metallic. That'll hose the glass mount (of course I don't think much of glass mounts anyway). If the tint is light, it may not kill you, but if it is a darker tint it will almost certainly ruin any hope of making a glass mount work. There are so many drawbacks to glass mount antennas anyway that I advise that you use something else, virtually *anything* else.

>If that is the case does anyone have any suggestions on what I might
>be able to use on a new 1996 Dodge Caravan. I want to stay away from
>a magnetic mount. The mounts still leave scratches.

Magmounts can be Ok, just make sure you put a heavy coat of paste wax on the spot where you're going to install the magmount, and make sure everything is *really* clean when you set it down. As long as you *leave* it in place, it won't scratch the roof. I had one on a Camaro for a long time and never had a mark. But you're much better to just drill the hole for a NMO mount and do the job right. (If you're worried about resale, just put a cheap cellular antenna on the mount when you get ready to sell and advertise it as "cellular ready", and ask *extra* for the added "feature".)

If it's a lease vehicle and you really can't drill the hole, then you might want to consider a coaxial sleeve dipole mounted on a Hustler mast and bumper mount. That works pretty well, though it looks like a HF antenna. The rear hatch may present a problem though. If the van has a luggage rack, Comet sells a clamp mount that clamps to the rack rail. That's not as good as a hole mount because the grounplane isn't perfect, but it does work, and almost certainly better than a glass mount. You can also use the clamp mount on a mirror if you have "west coast" style mirrors (sometimes come with towing packages).

The big problem with all the "temporary" mounting schemes is the routing of the coax into the vehicle. If you run it through a door, it'll eventually fail there from the crimping action, and the exposed portion can beat against the vehicle in the wind. If you drill a hole for the coax, then mount the antenna in it and be done with it.

A *real* ham brings a cordless drill with him to the dealership so
he can drill the hole and mount the antenna on his new vehicle before
he drives it off the lot. :-)

I look at where to mount radios and drill holes for antennas as part
of my checklist when shopping for a vehicle. If I can't figure out a
good way to mount the antennas and radios, I look at something else.

4748. GB2RS News 7th April 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <828669738snx@llondel.demon.co.uk>
Source record: 228272
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 7th of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with a request for information. RSGB Headquarters is compiling a 1997 calendar of events. Would organisers of all rallies and other events who have already fixed their dates for 1997 please contact Marcia Brimson, 2E1DAY, at RSGB HQ as soon as possible. The phone number is 01707 659015. The deadline for inclusion in this listing is Tuesday the 16th of April.

Groups intending to take part in the RSGB's National Field Day contest on the 1st and 2nd of June are reminded that they must register, by sending details of the site to be used, by this coming Tuesday, the 9th of April, at the latest. Send the details to David Hill, G4IQM, whose address is correct in the RSGB Call Book. Please enclose an SAE if contest stationery or an acknowledgement of entry is required. For further details see page 4 of the RSGB Contesting Guide, which was published in the September 1995 RadCom, or call David Hill, G4IQM, on 01293 882641 weekends or evenings.

Operators from Ireland, Northern Ireland and Wales will be on board several river cruisers on the River Shannon in Ireland next weekend, the 12th, 13th and 14th of April. They will be using callsigns in the series EI2SRR to EI9SRR, standing for "Shannon River Run", and will activate rare EI counties and Worked All Ireland squares. There will also be a land-based control station with full power and good antennas which will be able to provide information on the activity of the radio boats. A certificate will be available to stations who work each of the boats - probably six in total - plus the control station. Look for them around 3670, 7070 and 14270kHz on SSB or 3570, 7007 and 14070kHz on CW.

RSGB headquarters in Potters Bar will be holding another Annual Open Day on Saturday the 4th of May, between 10.00am and 4.00pm. Come along to meet HQ staff, as well as Committee Chairmen and other senior volunteers. See how RadCom is put together, how we send out 3,000 items of mail per week, find out how subscriptions and sales orders are processed, and have a guided tour of the headquarters building. You can also operate GB3RS from the HQ shack, visit the National Amateur Radio Museum, and browse through some of the historical and overseas publications in the National Amateur Radio Library. There will also be traders and second hand equipment stalls. For further information, contact Marcia Brimson, 2E1DAY, on 01707 659015.

A new GB2RS news broadcast starts today, the 7th of April, covering the Telford area. The newsreader is G3JKX, and the broadcast is at 1200 via the GB3TF 70 centimetre FM repeater on channel RB8. Reports will be welcomed by the newsreader.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Grenada WB8GEX was planning activity as J3K from the 5th until the 12th of April. Activity will be on all bands from 160 to 10 metres.

From Christmas Island, Martti Laine, OH2BH; his wife Leena, OH2BE; and son Petri, OH2KNB, plan activity as VK9XM from the 6th to the 11th of April. QSL via JA1BK.

And from Paros in Greece's Cyclades Islands, which counts as EU-067 for the RSGB IOTA Awards, SM0TXM will be active as SV8/SM0TXM from Thursday the 11th of April for one week. He plans some 160 and 80 metre activity.

The Bishops Stortford 70 centimetre FM voice repeater, GB3SV, which normally operates on channel RB0, has been off the air since the 28th of March. It will be off until further notice.

Next the Rally News:

Feltham and Hounslow Sea Cadets Computer and Radio Rally takes place today, the 7th, at the Feltham and Hounslow Sea Cadet Corps, 2 Popular Way, Feltham, in Middlesex. Talk-in is on 2 metres channel S22.

We know of five rallies next Sunday, the 14th of April:

The Launceston Amateur Radio Rally takes place at Launceston College. The event features traders, a bring and buy stand, an RSGB bookstall and membership information stand and Morse tests on demand. Doors open at 10.30am and talk-in will be on 2 metres channel S22. For further details contact Roy, G0IKC, on 01409 221624.

The Bury Radio Society Rally takes place on the ground floor of the Castle Leisure Centre, Bolton Street, Bury, next Sunday, the 14th. Talk-in will be on 2 metres channel S22 and further details may be obtained from Laurence, G4KLT, on 0161 762 9308.

The Lincolnshire All Micro Show Computer and Electronics Show will be at the Springfields Exhibition Centre, Springfields Gardens, Camelgate, Spalding in Lincolnshire, on Sunday the 14th. Doors open at 10.00 am and for further details you can call 01473 741533.

The Cambridgeshire Repeater Group Annual Rally takes place at Philips Telecom Catering Centre, St Andrew's Road, in Cambridge also on Sunday the 14th. For details ring 01223 811477.

And the Swansea Amateur Radio Society Rally takes place on the 14th of April at the Swansea Leisure Centre on the Swansea to Mumbles coast road. Doors open at 10.30am. Talk-in will be on 2 metres channel S22 and

further details may be obtained from Roger, GW4HSH, on 01792 404422.

The Amateur Radio Caravan and Camping Club's next rally will be in the New Forest, over the May Day Bank Holiday period from the 2nd to 8th of May. There is no trading at ARCC rallies, but any amateur wishing to attend as a caravanner or tent camper is invited to send an SAE for details and a booking form. Booking forms must be returned at least one week before the event. Write to the membership secretary, Alan Gard, G4LWA, whose address is correct in the RSGB Call Book, or telephone 01462 811208.

Now news of a special event station:

GB60BBC will be in use from Barry, South Wales, from Friday the 12th of April until the end of Sunday the 14th of April. The station celebrates 60 years of television broadcasting and is operated by members of the BBC's Ariel Radio Group. Operation will be on HF, VHF and UHF, and it is hoped to include Amateur TV.

Now for the HF contest news:

The SP DX contest is taking place this weekend, the 6th and 7th of April, from 1500UTC Saturday for 24 hours. Brief rules are on page 21 of the April RadCom.

The second of five sessions in the RSGB Slow Speed Cumulative Contest takes place on Tuesday evening, the 9th of April, from 1900 until 2030 UTC. Send CW no faster than 12 words per minute - and never faster than the other station is sending - between 3540 and 3580 kHz. Novices are particularly encouraged to take part. The third session is next Wednesday, the 17th of April. The rules are in last September's RadCom.

Next weekend, the 13th and 14th of April, the "His Majesty the King of Spain Contest" takes place for 24 hours from 1800 UTC Saturday. Separate CW and SSB contests run concurrently. Brief rules are on page 21 of the April RadCom.

Next some VHF contest news:

The RSGB 1.3 and 2.3 GHz Fixed station contests take place this evening between 1700 and 2100 UTC. The rules are in the September RadCom.

The second of three sessions in the RSGB 144MHz SSB Fixed Station Cumulative Contest takes place on Wednesday the 10th of April, from 1900 until 2100 UTC. The final session is on Thursday the 18th of April and the rules are in last September's RadCom.

Before the solar news, we have been informed by SSL that as of last Tuesday morning, the latest callsigns allocated were in the Mike Zero Alfa Alfa and Mike One Alfa Alfa series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Echo Whisky series.

And now the solar factual data compiled by Neil Clarke, G0CAS.

The period from the 25th to the 31st of March saw solar activity at very low levels and the geomagnetic field at mostly "quiet" levels. Sunspot numbers increased to 32 on the 26th but then declined and by the 30th the solar disc had become spotless. The mean for the period was 16. Solar flux levels remained at 72 units until the 28th and then declined to 70 units by the 31st. The average was 71 units and no solar flares were reported. Electron fluence remained at a high level throughout. X-Ray flux levels continued at A1 units every day. The 90-day solar flux average on the 31st was 72 units, one unit down on last week.

Geomagnetic activity was at "unsettled" levels with an Ap index of 13 units on the 25th, but then declined to "quiet". The average was Ap 8 units. The following data covers the period from the 19th to the 25th of March. The aa indices, as supplied by the British Geological Survey, increased from "active" levels on the 19th to "sub-storm" levels on the 21st with 62 nanoTeslas. They then declined back to "active" levels. The average was 37 nanoTeslas, about K3. Solar wind speeds increased to 610 kilometres per second by the 22nd but then declined to 540 kilometres per second for the rest of the period. Particle densities also increased to 16 particles per cubic centimetre by the 20th. The Bz was predominantly southward at about minus 2 nanoTeslas for most of the period.

I'll repeat the figures: spots - 16, flux - 71, Ap - 8, X-Ray flux - A1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 22nd to the 28th of March, declined from 7.4MHz to 5.1MHz by the 26th, but showed signs of improvement by the 28th. The darkness hour lows increased from 1.9MHz on the 22nd to 2.7MHz by the 28th. The daylight highs averaged 6.0MHz, with the darkness hour lows averaging 2.4MHz. The daytime highs took place between 1300 and 1900, with the early evening now being more common than the period around midday. The darkness hour lows took place between 0400 and 0500 hours every day.

I'll repeat the figures: highs - 6.0MHz, lows - 2.4MHz.

And lastly the solar forecast:

This week solar activity is expected to remain at very low levels, even though a slight increase in solar flux could take place. Geomagnetic activity is expected to be at "active" levels today and maybe tomorrow, but then decline to "quiet" levels. Ionospheric MUFs for the south are expected to be about 17MHz, the north-south paths could be slightly higher with the 21MHz band open to South Africa on the better days. The darkness hour lows are expected to be about 10MHz. Levels for the north will be about 2 to 3 MHz lower.

And that's the end of the solar information.

--

I thought I could be convinced otherwise, but I have decided that I was
right in not liking ham radio. You like it, that's good. But that doesn't
mean that it is the Ideal hobby for everyone. I just needed confirmation
before dropping it totally. I can allways use the money & time for my
band which is far more important.

Does anyone know about the Hamfest in Newcastle, DE on
April 21. Is this a big event? Are computer vendors there
or is it just Ham gear? What is your opinion on this event?

Steve

4751. US License Examination Opportunities Scheduled 4/4/96 to 7/29/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: Bart Jahnke <vec@arrl.org>
Message-ID: <31641691.2D54@arrl.org>
Source record: 228275

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/doc/hamualr/callsign.html

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 5 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License. FCC
Form 610-R is a computer generated renewal form that will be
sent from the FCC (beginning September 1995) to licensees whose
license is to expire within 90 days. Form 610-V is the special

application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC
vanity call sign information fact sheet PR 5000, number 206v)
by writing ARRL, 225 Main Street, Newington, CT 06111.
You must include an SASE.

Form 610V also is available from the FCC via the internet at

http://www.fcc.gov/Forms/Form610V

or

ftp://ftp.fcc.gov/pub/Forms/Form610V/

The FCC Forms Distribution Center will accept FCC forms requests
by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
860-594-0301. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else
bring two non-photo forms of ID); bring your original FCC license
and a photocopy of your license (if you are currently licensed);
bring the original and a copy of any Certificate(s) of Successful
Completion of Examination (CSCEs); if necessary, bring a scientific
calculator (that does not have the ability to store formulas); bring
a pen and two pencils; and be sure to bring payment for the test fee
if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you. Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or 1C credit qualifies the holder for Technician Plus HF privileges. The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit for the element(s) shown as passed. A Physician's Certification on a Form 610 is acceptable by a VE Team for 365 days after the Physician's signature date. Once accepted by the VE Team, assuming the applicant qualifies for a General or Advanced license, a CSCE is issued showing Element 1C (or "Physician's Cert. and Release: 1C") credit is valid for 365 days toward an Extra class license.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 860-594-0300 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "vec@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to

always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, (n) 301-317-7819 or 301-588-3924

M = The Milwaukee RAC Inc., PO Box 25707, Milwaukee, WI 53225;
414-466-4267.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068-0011; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926.
No fee.

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000. The 1996 test fee is $6.00.

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
910-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 423-688-7771. The 1996 test fee is $6.05.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1996 test fee is $6.05.

In all reality, just drill a large (~ 2") hole in the wall when it is
complete and stick in a nice white PVC pipe section with flange fittings slid
over each end to hold firmly in place. Presents a fairly aesthetic appearance
and is functional.

4756. What about 220Mhz? (was: 2 meter or 440Mhz?)

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: jgarver@ichips.intel.com
Message-ID: <4k14kb$468@news.jf.intel.com>
Source record: 228280

Why not consider 220, or rather 222-225Mhz? This band is still vastly
underused in most areas although it has better propagation than 440
(in my opinion but I live in a hilly area).
The hams have just not got the message yet even though we lost a couple
of Mhz off this band a few years ago. And equipment for 220 is getting
more scarce. The people at HRO are downright rude when I ask about
220 gear!

There are no radios because no real people care about radios.
Tell your friends at RIME I am planning to SPAM all conferences
with the truth about Howard.

QST de W1AW
ARRL Bulletin 35 ARLB035
From ARRL Headquarters
Newington CT April 5, 1995
To all radio amateurs

Read the above.
Are ANY ARRL bulletins (except the propagation report) not from ARRL headquarters? Does Newington have to be on each one? Are ANY bulletins addressed to any one OTHER than "To all radio amateurs?" Why does the ARRL and hams in general use 1000 words when 100 will do? Aren't we "into" communications?

The F.C.C. said the following:

''The amateur service community in the United States generally considers the current telegraphy speed requirements as necessary and appropriate,'' the FCC said.

Who the hell is running the FCC, the hams or the government? The FCC is using as justification for keeping CW the fact that hams want it. Can't the FCC make a decision for the public good and merely consider the hams opinion rather the be dictated to by the ARRL and other hams? Should I write my Congressman to see who is in charge? (by the way I support the current CW/no code position).

4760. PacketCluster software

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: paulie@pryan.data.binghamton.edu
Message-ID: <yhg2ajbp64.fsf@pryan.data.binghamton.edu>
Source record: 228284

Where can I find information about the software that is commonly used for dxclusters? I've searched the net, and there's no reference.

4761. my upgrade never arrived - wt do I do?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: cassidy@elvis.rowan.edu
Message-ID: <4k1jbd$l9i@cobain.rowan.edu>
Source record: 228285

About a year ago, I upgraded to general. Although my new class appears in the callbooks, I never recieved an upgraded license. who do i call? (whom do i call?) i'm not terribly concerned about it, but i bother to learn code for it....

thanks,

kc

To all radio amateurs

SB DX ARL ARLD018
ARLD018 DX news

This week's bulletin was made possible with info provided by Mako, JA1OEM, Walt, G3NYY, Tedd, KB8NW, Chris, G4BUE, the OPDX Bulletin, DXNS, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

NEPAL, 9N. Mako, JA1OEM, is reactivating 9N1HP during the month of April. He looks for North America between 2300 and 0100z on 3502, 3508, 7002 or 7008 kHz. QSL to his home address.

EQUATORIAL GUINEA, 3C. Teo, 3C1DX, has been on the air from Bata. Though operating mainly 40 and 20 meter CW, he was also worked on 14195 kHz SSB at 1950z. QSL via EA6BH.

FRENCH POLYNESIA, FO. Several VK and other ops will be active sometime this month as FO0OM/P from Dundas Reef.

CROZET ISLAND, FT. FT5WF has been on 14226 kHz at 1255z freestyle with few takers. QSL via F5IZK.

ISLE OF MAN, GD. Rick, AI5P, will be on the air signing GD0/AI5P until April 25. QSL via AI5P.

GRENADA, J3. Joe, WB8GEX, will operate as J3K April 5 to 12 on 160 through 10 meters. QSL via WB8GEX.

WESTERN SAHARA, S0. S020R will be active through April 7. This operation features 160 through 6 meters with three stations up and running around the clock. QSL via EA2JG.

SAINT HELENA ISLAND, ZD7. Andy, G4ZVJ, will sign ZD7VJ until April 12. Check 1827.5, 3503, 7003, 10107, 14027, 18077, 21027, 24897 and 28027 kHz. QSL via Andy's new address of 5 Thorpe Chase, Ripon, North Yorkshire, HG4 1UA, England. There is a chance he will be on from Ascension Island as ZD8VJ April 16 to 23.

ASCENSION ISLAND, ZD8. N6TJ, will sign ZD8Z April 16 to 24. Check 14160 kHz at 2000z and 21250 kHz at 1900z. QSL via VE3HO.

MONACO, 3A. Bert, DJ5MN, plans to be active starting mid-April signing 3A/DJ5MN. QSL via DJ5MN.

SRI LANKA, 4S. Listen for Mario, HB9BRM, signing 4S7BRG starting around March 17. Try 14290 to 14320 kHz or 21270 to 21300 kHz at 1600z, and 3580 to 3800 kHz or 7040 to 7070 kHz from 1900 to 2100z. He also works AmTOR and PacTOR. QSL via HB9BRM.

NORTHERN MARIANA ISLANDS, KH0. Kou, KH0/JM4HNS, will be QRV April 11 to 14, mostly on 17 and 10 meters. QSL via JM4HNS.

CYPRUS, 5B. Frank, DL8KWS, will operate as 5B4/DL8KWS through April 10. QSL via DL8KWS via the DARC bureau.

CONGO, TN. Sam, KF4BTY, is on the air as TN/KF4BTY. QSL via KF4BTY.

GIBRALTAR, ZB2. Hans, DL7CM, and Torsten, DL1BX, plan to sign ZB2/their home calls May 10 to 20.

MALDIVES, 8Q. Andy, G4VPM, plans a September QRP operation, possibly with the call sign 8Q7PM.

COMOROS, D6. Michel, FR5HG, is QRV as D68SE. QSL via F6FNU.

PIRATES COVE. Tony, A45ZN, reports a pirate using his call on 80 meters and giving ZS1D as QSL manager.

CORRECTION DEPARTMENT. G3NYY reports the QSL route for 5R8EN was incorrect in last week's bulletin. The correct manager for 5R8EN and 5R8EN/P is F6AJA.

THIS WEEKEND ON THE RADIO. The menu includes the EA RTTY, Elettra Marconi, Holyland DX, SP DX CW and MARAC SSB County Hunter's contests. See page 109 in April QST for more information.

4763. Connecticut QSO Party May 4-5, 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4k1lri$rak@newsbf02.news.aol.com>
Source record: 228287

1996 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 4 until 2000Z May 5, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single Multi-multi classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange report and state/province/DXCC country.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low end; Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150, 144.200, 146.580. RTTY - Normal RTTY Bands (No WARC Bands)

Score one point per phone, RTTY QSO and two points per CW QSO. QSOs with club station W1QI and ARRL HQ station W1AW count 5 points.

Connecticut stations multiply QSO points by states/ provinces/Connecticut counties worked (DX only one multiplier); others multiply by Connecticut counties worked.

Plaques and certificates (100 point minimum). Special certificate for working all 8 Connecticut counties.

Send entry and SASE for results by June 5 to CARA, P.O. Box 3441, Danbury CT 06813-3441.

Good luck and 73 de Jim, KD1YV

4764. * Need software to program Motorola GP-300 *

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-04 00:00:00 UTC
From: acooney@netcom.com
Message-ID: <acooneyDpCoEx.A6p@netcom.com>
Source record: 228288

I've been given a couple of Motorola GP300 VHF walkies, and would like to be able to reprogram them for ham, marine, and weather channels. There's a company advertising on AOL that sells the necessary cables and hardware to do the job, and the price is fair. The software, though, is apparently only available from Motorola, and is way too much money.

If you've any software and/or hardware for programming these radios that you'd like to sell, rent, or trade, please let me know.

Cheers!
Alan

Hi. I'm giving a talk later this year on the general subject of how Ham Radio and the Red Cross can work together during disaster. If you have either specific experience or thoughts on the subject, I'd love to hear from you.

Just drop me an e-mail and thanks for your help!

Ken WA9WCP

So you're teaching your eleven year old to break federal

laws and build or operate pirate stations, (Checked the name

of the group latel;y???

>In my opinion, posting topics with title like the one in question to a

>public newsgroup (especially one whose topic is clearly technical and

>hobby oriented and not controversial in nature), is the same as going

>to a public place like your local shopping mall and shouting those

>words.

>I would like to see the original writer of the topic, go to the

>shopping mall and repeatedly shout the topic of his note and see how

>long his free speach rights keep him from getting arrested or

>booted...

Depneds on the shooping mall, and anyway it sounds to the

same as a what I hear working with various broadcast crews

(or maybe a little tamer).

Was Internet your first contact with the REAL world???

I agree completely with what RD Davis has said above. I'm the guy who originally enquired if teh test has any practical work.
If it wasn't for the likes of A R Durell replying to me both in this newsgroup and personally through e-mail then I'd
be a lot more in the dark concerning the requirents of the test than I am
now. Someone takes the time and trouble to reply and help a fellow radio enthusiast in need and the only thing other people
can do except saying 'Well done' is critiscise him. Come on fellas, tht's just not on, especially
in a serious newsgroup like this one.

If you want to make those sort of childish remarks save it for the newsgroup which talks about
childrens television.

David.

So Mr. Walt Davidson you like putting things in the waste paper basket
that you don't agree with. I've been watching you around this newsgroup.
You read what other people have to say and then you say something like
more people ought to have some respect and manners on here.

Walt, you are the ****ing Percy sugden of the Internet.

You are sucha hypocritical bastard!!!

To anyone who doesn't believe what I have just said read the following which is an extract from a
typical Walt Davidson reply:

"Don't you know what a kill-file is?

A heavy iron file, used for killing precocious 11-year-old readers of
obscene radio-related news articles?"

--
So Mr Walt Davidson, you like to spout off at other people, but you say things
like this - about killing 11 year old precocious children with heavy iron files.

Are you fucking thick or something. We've just had the Dunblane massacre where
19 children were killed and 10 others seriously injured by a middle-aged self-
confessed homosexual pervert. A strong feeling tells me you fall into this category.

you come on here telling other people off and then you go and saying something as
bloody insensitive as that!

Anybody who wants to read the original article posted by this middle aged PRAT with tendencies of violence can read it in this newsgroup just to see what sort of a man this Walt Davidson really is. The article number is 47545.

So Mr fucking ******* Walt Davidson. In an earlier article you accused me of being anti-social. IF YOU WANT TO KNOW WHO'S ANTI-SOCIAL JUST LOOK IN THE FUCKING MIRROR!

I'm sorry about the language I've used in this posting, but its deemed to be necessary because the sooner people like Walt Davidson are ejected from serious subject newsgroups like this where people come to talk about ham radioand not about killing 11 year olds with iron files the sooner we'll have more people looking in on here.

Oh yes, one last thing before I go Mr. Walt Davidson. You said in an article earlier that radio should be for the young and old alike. So what are you doing saying you want to kill eleven year old children with an iron-file?

You probably only want to kill children because they won't succumb to your perverse sexual practises!!!

Honestly people like you making me ******* sick!

David.

AKA The Walt Davidson fuck off support group.

W5YI sells one on diskette in QST. That's probably where you saw it.
Once the vanity callsign program gets underway, the list will change so
fast that the diskette will be obsolete by the time it arrives at your
house.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 APRIL AND FORECAST FOR 06 APRIL - 08 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 04 Apr
Daily Proton Fluence >1 MeV: 1.3E+06
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 1.9E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Apr 07 Apr 08 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 04 Apr
Learmonth 4 2121 1211
Fredericksburg 6 12
Planetary 6 11

Observed Kp for 04 Apr: 3231 4312

2B. MAGNETIC FORECAST
Date Ap Conditions
06 Apr 8 Quiet to unsettled
07 Apr 14 Unsettled
08 Apr 10 Unsettled
COMMENT: IPS Geomagnetic Warning 6 was issued on 4 April and
is current for interval 7-10 April. Current activity indicates
that the activity levels predicted may not eventuate.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
05 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
06 Apr Normal Normal Normal
07 Apr Normal Normal Normal-fair
08 Apr Normal Normal Normal-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
05 Apr 8

Observed Australian Regional MUFs:
Darwin: Not available.
Townsville: 15% depressed to near predicted monthly values.
Sydney: Near predicted monthly values.
Hobart: 15% depressed.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
06 Apr 10 near predicted monthly values
07 Apr 5 about 5% below predicted monthly values
08 Apr 0 about 10% below predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 4 April
and is current for interval 8-10 April. Current activity indicates
that the conditions predicted may not eventuate.

You're right, it's no big deal, but if nothing else you will need it some day to upgrade or renew. If you want to look it up, it's section 97.29 -- but what it says is to send a letter explaining what happened (or in this case, didn't) to: FCC 1270 Fairfield Rd. Gettysburg, PA 17325-7245.

While there are many of us who do not agree with everything that Walt says,
I do not think that a public display of such scurrilous and libelous abuse
is ever an appropriate response.

I suggest that you seriously consider publishing here a retraction and an
apology, or else I, for one, would be very willing to stand as a witness
should Walt consider pursuing you for defamation of character.

In addition, I have registered a complaint with the postmaster at your
organisation. I suggest that others do the same.

You can find out if your callsign of interest is presently assigned by checking it on the QRZ Callsign Locater virtual callbook website. If you can't find an owner of the call there, it is probably unassigned. For example, a check of my previous calls, WB2ZPS and AJ2O, result in no responses. I know that WB2ZPS was reassigned in the late 70s-early 80s from old callbooks, but the subsequent liscensee apparently has let his ticket lapse.

Which brings up a good question, something I have wondered about for years. Why is it that we 'hams', most of us being employed in fields other than electronics design, and few of us being capable of building our own equipment, think that the first thing we should do with a new $2000.00 radio that was designed and manufactured by professionals, is to open the cover and MODIFY it so that it works better ? I never see anyone asking for TV or refrigerator mods or toaster mods, do those things all work correctly out of the box ? You never know, maybe there is a diode in my TV that I could clip and start watching channels I never dreamed of, or a diode in my toaster that I could clip that would make the bagels pop out with cream cheese already on them ?

Does anyone have any historical data on the phenomemon of MODS ?

>One of our OT Extras, himself a VE, sternly challenged this individual.

Um, why? Was there some reason to believe this waiver was forged or
otherwise not completed as instructed by the FCC? Was this OT Extra
actually a doctor qualified to dispute the physician's certification?

Just because some folks don't like the rules doesn't mean they don't
have to follow them, and this applies to VEs, even OT Extra VEs. If
someone presents a properly completed waiver, the VE is bound by law
to accept it, not launch off into some stern challenge. Action like
this needlessly generates ill will.

>While I can understand that there will always be those who are ready to
>abuse any well-intentioned accommodation, talking with this gentleman
>satisfied me that he was not trying to sidestep the requirement. He said
>that he had hit a plateau at 17 wpm, and sought the advice of an audiologist
>when he could progress no farther. He was told that he would need a hearing
>aid within two years.

It isn't up to the VE to second guess the physician's certification;
the VE needs to make sure the certificate is properly completed (by the
letter of the law) by a qualified physician, end of story. I wonder how
the OT Extra would feel if someone sternly challenged his license status,
perhaps implicitly accusing him of wrongdoing in the process.

>I am glad to see that there is an avenue to report suspected abuse.

Yup, so am I. Could you please forward the details of the VE session
that this abuse took place at (VEC, date, location, identity of VEs and
OT Extra) so I can report the suspected abuse to the VEC?

;-)

>
>You are sucha hypocritical bastard!!!
other abuse snipped..

I don't know what is accepted on rec.radio.amateur.misc, but I don't
think what you have said above is really acceptable in uk.radio.amateur

What you said does not offend me personally, but it does create a very
bad impression of yourself and I don't think others want this sort of
silly outburst posted in this group. (uk.radio.amateur)

I've been around in radio for a long time (I don't regard myself as an
"old fart" at 42, but these things are all relative...) and you have to
learn to tolerate other people's position and views --- hard, sometimes,
I know -- and try to keep a sense of humour.... That's what Amateur
Radio and The Internet is all about..

I can't help noticing that people who are afraid of revealing their
identities are very often abusive...

Go and have a lie down in a darkened room for an hour or so and you will
soon feel better.... !!

Regards..

The ENTIRE exchange of the earlier message posted by Hans Brakob:

Vince writes:
>There is likely to be an even larger gap between those
>in the Amateur Service when and if a no-code HF license
>becomes law.

(To Vince): Two points:

1) This "gap" is self imposed.
2) It is rarely observed on the air, but permeates cyberspace.
(Maybe it's a "cyber" gap and not a "real" gap.)

Hans:
It matters not whether the gap is self imposed or not. You'll
have to cut to the chase, as you suggested several days ago,
and collect "the best minds in ham radio" to secure a solution.
The situation as it stands at this moment is out of hand.
Fix it, or at least set up the mechanism to fix it. The time
for fooling with this issue is over. No more time left!

Regards,
Vince, WB2EZG

You need to go directly to the horse's mouth on this one. Call the FCC.
If your upgrade is showing up in the callbooks, then it is in the FCC
database, and they should have mailed you a new license. Since you didn't
get it, either they have your address wrong, or the post office screwed
up. In either event call the FCC and have them issue you a replacement.

>RS products are ok, but then aain buyer beware.
>
>Peter
>

I have run into a few good salespeople at RS over the years (as well as been one on and off over a 6 year period - mostly xmas help).

RS's problem is that they don't care if the salespeople are knowledgeable, and their idea of good customer service is not how well their customers' questions can be answered, but making sure the customer has everything they "need".

For example when a customer comes in to purchase a VCR we are told not only to sell the VCR, but to add on a head cleaner (for a NEW VCR??), some blank tapes, a rewinder, and gold-plated hook-up cables (never mind the ones that the unit comes with!), don't forget the 3 year TSP for $200, on a $300 VCR! Your total sale for a $300 VCR would be over $600 with tax...

The sad thing on that whole scenario is that RS salespeople are graded soley on that bases! I have never seen someone laid-off because they weren't able to answer customer questions, but I have seen people get canned because their 'numbers' weren't that good...

They keep track of your sales Year, Quarterly, Monthly, Weekly, Daily, and HOURLY, which is their primary basis for evalutaion, $/hour!

Not too mention Lines Per Ticket (number of items you sell per sale), your percentages of TSP which anything below 3.5% is unacceptable, and your RSVP percentage which they want to be at least 20%...

They have a small training program on connectors, parts, alarm systems and such, but devote more time to sales training... Only the slick sales people make it there, which is why I will not work there anything but part xmas help...

It's really sad because one of our local stores is managed by a 19 year-old! Talk about crap! He isn't very knowledgeable in electronics, but good in sales!

I won't purchase any major item from the rat-shack especially their lemon ham radio gear... I got an HTX-202 four years ago with a TSP, had it repaired 3 times over the 2 years I had it... Then like an idiot, about a year after I got the 202, I bought the 404... This is a good one... I was portable with the 404 talking to a friend of mine when the lithium battery inside exploded...

I head a muffled pop then the unit got warm and started to smell pretty bad... I took it back and because it was after 30 days they wanted to repair it! I said no way! Last time I heard, lithium was toxic! They verified that it was the battery when the salesperson took it apart.. After a couple days and calls to the DSM and fort worth I got them to exchange it for another...

Buyer beware! A talk with a former boss and manager of a local RS says they now fix damaged merch and resell it for full price! So if someone buys a VCR, brings it back a couple days later because it eats tapes, they will box it up and have it repaired, then resell it as new for full price!

That sounds illegal to me! You can't legally sell a car as new when it's been previously owned repaired, so why can you do it with electronics...

>73, Jim KH2D

It all started shortly after the first commercial radio hit the market, sometime around 1920. Up until then, amateurs had to build everything. As soon as commercial gear appeared, amateurs started modifying it. If we treated our radios like they were sealed, and went crying to the factory when they broke, we'd be no different from other radio services. We're experimenters and tinkers by nature, so of course the covers come off right away.

Equipment is designed to cost, and designed to market, but it may not be designed to optimally suit our individual requirements. So we go in and make modifications. It's a good way to learn, and a lot more convienent than scratch building. And besides, it's fun to dig out features hidden by the manufacturer in their products (which often are designed to work in many different services and different markets with only slight changes in programming), or to solve problems resulting from a need to come in under a certain cost with a design (IE using ordinary switching diodes intead of PIN diodes in band changing circuits), or to solve problems resulting from inclusion of features we don't need but which cause problems when we do things we do need to do (IE DC to daylight front end filters that impose IMD on us that we don't want because the market survey

said "scanner" while we say "communications radio", or vice versa).

If we just *operated* the boxes, you might as well call us CBers.
But we're not CBers, so under the hood we go. We're the same sort
who hotrod perfectly ordinary cars, and yes, I'm sure there are some
of us who hotrod toasters and refrigerators too. In fact, let me
tell you about a Freon 12 substitute that gives 20% better cooling
performance. You can mix it up at home...

:::::::::::::: DRAKE C-LINE STATION ::::::::::::::::

BASIC PACKAGE:

* R-4C Receiver (serial # 16320)
* T-4XC Transmitter (serial # 20489)
* MS-4 Speaker
* AC-4 Power Supply

INCLUDED EQUIPMENT & ACCESSORIES:

* Crystals for WARC, WWV, etc.

* CW filters -- 250 Hz + 500 Hz

* Owner's manuals --
Excellent condition, no underlining, no torn
pages, and no coffee stains.

* Original connecting cables in mint condition.

DETAILS:

* All units are in excellent, near-mint condition.

* R-4C recently aligned by Drake at their
Franklin, Ohio facility.

* NO dents!

* NO stains!

* Absolutely original condition. NO mods!

* Know defects:

o Missing cover for the accessory crystal sockets at
the rear of the R-4C.

o Finals a bit weak on the upper freqs.

::

Asking $575 + shipping.

Please e-mail with offer or request for additional details.

In response to Hans Brakob, who writes:
>Vince is an editor, not a reporter.

The job of editor, writer, and reporter all go into one in my particular case, Hans, and have for 20 years. It's unfortunate for you, but it's a problem you will have to live with. When you can provide evidence that the documentation I've provided is incorrect, then you will have a case. Otherwise, I must assume you are just another ARRL representative seeking no real solutions to the problems at hand, only singing the company line.

>of the group latel;y???

I didn't write the part about the 11 year old.

The message was posted in ALT.RADIO.SCANNERS also and, I think the person who cross posted his reply to ALT.PIRATE.RADIO may have done so by mistake, I did the same thing.

I didn't respond to your mail, because there was little to respond to. I received a couple other mail messages from other folks who disagreed with me, the others had points worthy of discussion and I responded to them. While we disagreed we had mature and rational discourse on the topic, and in one case some useful and freindly interaction on another topic.

I'm only responding to your silly sarcasm here, because when I didn't respond to the mail that you sent me, you had the bad tast to push the issue and repost what you sent me in private to this public forumn.

>Was Internet your first contact with the REAL world???

I have had lots of contact with the real world, and the internet is not it. Sad that you think it's the real world. The tone and style of your messages suggests to me that you need more real world face to face interaction with people.

And this makes everyone happy. The civilian users are happy because they think SA will actually be terminated. The military is happy because it isn't. And the political administration is happy because they'll be out of office when the time is up so they don't have to keep (or be blamed for not keeping) their promise. And nothing actually has to be done. A win-win-win.

From: shamrock@microagewny.com
Message-ID: <4k3ns3$8dg@mawny.microagewny.com>
Source record: 228233

Hi,
Just wondering if anyone has found any mods to the HTX-212 like
being able to program out-of-band freq like 162.55 <weather in my
area> into memory instead of just VFO...or being able to select
programmed memory channels for selective scanning ie.. scan 5,10,
or just two memory channels at a time...I know there is a way to
"NOT-Scan" 5 freq's but that leaves 25 left scanning....

Or a way to expand number of memory channels ??

I love the radio it performs really great but just falls a little short in
the above areas...guess my Alinco ht spoiled me :>.

4813. Announcement: Azimuthal Equidistant Projection Map Server

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-05 00:00:00 UTC
From: mack@ncifcrf.gov
Message-ID: <DpEMv6.Mq3@ncifcrf.gov>
Source record: 228235

Announcement: Azimuthal Equidistant Projection Map Server

is at

http://www.xray.duke.edu:1080/

This server will generate on-line X11 or
downloadable GIF azimuthal equidistant maps according
to your specifications (QTH, scale...). The server
uses the GPL'ed package azproj10.zip, written by
Michael NV3Z and myself, and which is available from

nic.funet.fi/pub/ham/antenna
and
oak.oakland.edu/pub/hamradio/dos/ham-utils

73 de Joe NA3T
FM19gq
mack@ncifcrf.gov

Here is the README file from AZPROJ

Azproj v1.0 is a collection of postscript files and data
files for generating azimuthal equidistance projections of the earth
from (almost) any point on earth. It can plot color maps of the
surface of the earth on any scale, draw and/or label grid squares,
show worked grid squares on a band(s) of your choice, dxcc
countries (and countries worked an a particular mode, eg CW/SSB),
mountain tops, rovers, repeaters, beacons and can use NMEA input
from a GPS receiver to center the map.

Azproj can be run on ANY computer (Mac, PC/DOS/Win/DVX, Unix)
and output to a postscript device (printer, ghostscript runing on a
unix or DOS machine with a ghostscript compatible printer, eg
HPcolor inkjets). Ghostscript will also allow display of the maps
on screens.

Although a rudimentary understanding of postscript will
help in running azproj, sample .bat files are supplied to make
initial maps and it should be possible to make simple changes to
the az_ini.ps and *.bat files to get the maps you want.

To display the maps on a screen or to use a
non-postscript printer, you should first obtain ghostscript
(available for PC (DOS, Win, DesqViewX) or Unix) from your
favorite ftp site (try ftp.cs.wisc.edu/pub/ghost)

The azproj files are GNU copylefted.

I must point out, in light of the safety inspection discussion on this
subject, that I have three 8 foot ground rods driven in the ground outside
this antenna cable port, and that all cables goe through lightning arrestors
which are bussed to this ground system before they enter the house.

: >>essence of what i am.
: >
: >What you are? A coward?
: >
: >Yes, well like all anonymous letters, your posting went straight into my
: >electronic waste paper basket.
: >

: >--
: >Walt Davidson

: So Mr. Walt Davidson you like putting things in the waste paper basket
: that you don't agree with. I've been watching you around this newsgroup.
: You read what other people have to say and then you say something like
: more people ought to have some respect and manners on here.

: Walt, you are the ****ing Percy sugden of the Internet.

: You are sucha hypocritical bastard!!!

: To anyone who doesn't believe what I have just said read the following which is an
extract from a
: typical Walt Davidson reply:

: "Don't you know what a kill-file is?

: A heavy iron file, used for killing precocious 11-year-old readers of
: obscene radio-related news articles?"

: --
: So Mr Walt Davidson, you like to spout off at other people, but you say things
: like this - about killing 11 year old precocious children with heavy iron files.

: Are you fucking thick or something. We've just had the Dunblane massacre where
: 19 children were killed and 10 others seriously injured by a middle-aged self-
: confessed homosexual pervert. A strong feeling tells me you fall into this category.

: you come on here telling other people off and then you go and saying something as
: bloody insensitive as that!

: Anybody who wants to read the original article posted by this middle aged PRAT with
: tendencies of violence can read it in this newsgroup just to see what sort of a man
: this Walt Davidson really is. The article number is 47545.

: So Mr fucking ******* Walt Davidson. In an earlier article you accused me of being
: anti-social. IF YOU WANT TO KNOW WHO'S ANTI-SOCIAL JUST LOOK IN THE FUCKING MIRROR!

: I'm sorry about the language I've used in this posting, but its deemed to be necessary
: because the sooner people like Walt Davidson are ejected from serious subject newsgroups
: like this where people come to talk about ham radioand not about killing 11 year olds
: with iron files the sooner we'll have more people looking in on here.

: Oh yes, one last thing before I go Mr. Walt Davidson. You said in an article earlier that
: radio should be for the young and old alike. So what are you doing saying
: you want to kill eleven year old children with an iron-file?

: You probably only want to kill children because they won't succumb to your perverse
: sexual practises!!!

: Honestly people like you making me ******* sick!

: David.

: AKA The Walt Davidson fuck off support group.

--
Does anyone else get the feeling that "David" is not only bigoted and
antisocial, but mentally ill as well? Perhaps just an angry loser?

With the obvious people skills(?) and tolerance(?) and self-control(?!!)
that he exhibits, he must be doing very well in the working world.

This guy doesn't simply twist words and concepts; he makes pretzels
out of them.

You need a license to buy a gun but apparently anyone can own a PC
and get net access.

Oh well. Better brace myself for more all-upper-case shouting hate mail.

Shane

4819. CW,HF,and WRC-99

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-05 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <3165A594.301F@aloha.net>
Source record: 228241

Aloha to All,

Agenda item "2.2 Condiseration of Article S25 concerning the amateur and amateur satellite services" for WRC-99.(Art. S25 renumbers privious Art. S32 which contained Radio Reg. 2375, amateur Morse tests for HF priveleges internationaly.)
As result, the IARU has established a committee called The Future of the Amateur Service Committee(FASC) to assist/ advise the IARU in formulating policy/positions on the above WRC-99 agenda item. The members are:

Chairman: Michael Owen, VK3KI

Larry Price, W4RA, POB 2067, Statesboro, GA 30459-2067

David Sumner, K1ZZ, dsumner@arrl.org

John Bazley, G3HCT

Tom Atkins, VE3CDM

Terry Carrell, ZL3QL

Dick Baldwin, W1RU, ex-officio, Hc Box 60, Waldoboro, ME 04572-9026

A long list of items is assigned to the committee to be considered. One, at least, is of particular interest specifically to you:

"...having regard to: ..the technical and operational qualifications for licensees in the amateur services, " .

The committee is to encourage full discussion of these matters, invite comments from individuals, groups, member-societies, and regional organizations, participate in meetings and take into account comments it receives, prepare reports, recommendations, and proposals by the Administrative Council, member societies and others. As a first step, all IARU member societies have been invited to send opinions to the chairman of the FASC(VK3KI) as "to how the Radio Regulations might be modified or improved to meet the challenges of the 21st century."

The first regional conference to consider recommendations from the committee will be the Region 1 Conference to be held in Israil, September 1996. Others will be held over the following two years leading to WRC-99.

In the UK, the Radiocommunications Agency has asked the Radio Society of Great Britain to consider formally the proposal to

delete Morse testing as a req for HF privelege. "whether the Morse test is a relevant means of differentiation (between classes of license)....It is clear that this is an issue on which there are differing and strogly held opinions. It is now timely to reconsider this issue and to decide whether the Morse requirement is one in which radio amateurs see relevance to the next millenium."

In France, F6IIE, vice-president of UFT(Union Francaise des Telegraphiste) has written, "Let those who are against the CW exam not delude themselves, they risk having something other than CW to learn. Those who are in trusteeship will not do away with (overnight) a "filter" so efficient for controlling access to the HF bands.....the CW examination is not really so difficult...it opens up horizons certainly more interesting than all the data-processing systems (which are) useful indeed, but of which one tires so quickly, and which render communications more and more impersonal." Translated from La Pioche, journal of UTF, by Ken Quigg, GI4CRQ, and printed in Morsum Magnificat, Feb. 96.

This will be a hot topic in the two and a half years before WRC-99. Be prepared to respond to surveys/poles by ARRL and probably others, and to clearly express your reasons for retaining or dropping Morse as a req for HF operating privileges.

Obviosuly the English and French are moving out smartly to face the issue, and do have opinions already in mind!

As the first Region meeting is only a few months away at which the issue will for the first time be formally discussed in light of the WRC-99 agenda, you might want already to organize some thoughts carefully on the issue and maybe e-mail or post to the FASC committee member of your country, or nearest you. I hve included K1ZZ's e-mail address above, though not at all sure he is ready to receive input on the topic just yet, but who knows?

73, Jim, AH6NB

This will be a hot topic in the two and a half years before WRC-99. Be prepared to respond to surveys/poles by ARRL and probably others, and to clearly express your reasons for retaining or dropping Morse as a req for HF operating privileges.

Obviosuly the English and French are moving out smartly to face the issue, and do have opinions already in mind!

As the first Region meeting is only a few months away at which the issue will for the first time be formally discussed in light of the WRC-99 agenda, you might want already to organize some thoughts carefully on the issue and maybe e-mail or post to the FASC committee member of your country, or nearest you. I hve included K1ZZ's e-mail address above, though not at all sure he is ready to receive input on the topic just yet, but who knows?

Source record: 228243

Bob,

Pleased about your reaction. It is good that among the committee
are both New Zealand and Aussies hams; the chairman is a VK. And the
French are very anti-NZART. So, if enuf pressure to retain CW
were to come from US hams to the ARRL, I believe they will
suppot its retention as a req. One responder has ventured the
thot that EU will, in fact, be the deciding opinion; and that
they will insist on keeping the CW req for HF operations rights
and be willing to give it up ONLY at the cost of more amateur
frequency bandwidth at or around 5 and 7 mHz, and the retention
for many years of set aside CW mode bandwidth, regardless of the
req for CW skill as a license priviledge at HF. Am sure many
such suggestions will come forward over the next couple of
years.

73, Jim, AH6NB

4825. RACES as 501(c)(3)???

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-05 00:00:00 UTC
From: wm8s@citynet.net
Message-ID: <4k46ft$q3d@news.citynet.net>
Source record: 228247

Reposted from soc.org.nonprofit:

I am the director of a my County's RACES (Radio Amateur Civil Emergency Service) unit. RACES is a team of licensed amateur radio operators that assist County government agencies during disasters by providing communications channels and operators. The RACES "concept" was created by federal code (47 CFR 97) but each individual RACES unit is actually sponsored by (and a part of) a state or local government agency (usually the jurisdiction's emergency management agency).

We would like to solicit funding from area companies, individuals, grant-making institutions, etc., to finance our equipment (a few tens of thousands of dollars a year at the most), and I'm having a tough time figuring out exactly how to go about doing that.

We're sort of a "pseudo-government entity": not created by local statute but sponsored by local government; not sponsored by a federal agency but created by federal statue -- a group without a home, so to speak. I don't want to have our supporters write the County treasurer a check and then have to go through the County's budgeting and fiscal process; I'd like to incorporate as a 501 non-profit organization with our own, separate financial operation.

I think we should set up a separate corporation and call it something like "The Kanawha County Emergency Communications Foundation". The sole purpose of that corporation would be to accept donations for and fund equipment purchases, operating expenses, etc., for the Kanawha County RACES Unit.

Am I on the right track?

Are there certain words in the corporation's name I want to avoid like "fund" or "foundation"? Certain words I *should* use?

Does this sound like 501(c)(3)?

Most importantly: Will the corporation just be able to accept donations for the team and then have to turn right around and make like, cash payments to the County treasurer for eventual acquisition of the equipment? Or can the corporation accept donations, make capital and expense disbursments directly, and perpetually maintain ownership of the team's gear and other property?

Or.... do I need to pay an attorney and/or an accountant to do this? I'm a small business owner, have some free time and think I'm clever enough to do it myself, but I know the IRS can be picky. There are hundreds of RACES units around the country; I'd love to find out what they've already done.

Thanks!

There was an excellent article by W5RTQ that has be included in the
ARRL antenna literature for years..he used a crank up.

electrical contact between section is the problem. AE6E told me to
use ground strap tied to the outside of each section. Tight when up,
but flapping when the tower is down.

I also suggest you take a look at the N4KG method (June 1994 QST) that
is the opposite of shunt feeding.

The real draw back is that often the tower is next to the house.....

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at http://www.csz.com/sarrio.html.

This new classified section will allow Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access, direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within Ham Classifieds, and there will be no posting time delays. Your posting will go on-line, in our classified search engine, immediately. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line within 1 hour. I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

Here is a summary of news items covered on edition #158 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 12-Apr:
-
1. Bill in Congress Seeks Protection for VEs, Amateur Auxiliary
2. Wisconsin Legislature to Vote on PRB-1 Clone
3. Late Commerce Secretary a Friend of the Amateur Community
4. FCC Commissioner Resigns after Seven Years of Service
5. DA Seeks Death Penalty for Murderer of Two Louisiana Hams
6. ARRL President Appoints New Delta Division Vice Director
7. N4KSO Resigns, League Designates New Virginia SM
8. "The RAIN Dial-up" from Chicago
9. Weekly Propagation Forecast with George Bowen, N2LQS
10. American Astronaut Aboard Mir Active on 144 MHz Using R0MIR
11. Send Your Name and Call Sign to Saturn - An Update
12. AMSAT-URE Establishes Spanish Language Web Page
13. Broadcasters Lobby Congress to Keep Broadcast TV Free
14. "Amateur Radio Newsline" - Edition #973 from Los Angeles
15. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
16. Special Event Station Calendar
17. "This Week" Satellite Service Ends - A Look at What Happened
-
Funding for the program's transmission and production expense was
provided this week by a grant from Dana Rodakis, AJ1R, of St.
Petersburg, Florida, where listeners can hear "This Week in
Amateur Radio" on the AJ1R repeater system on 51.84, 145.23,
147.285, 442.075, 443.625, and 443.95 MHz serving Florida's Central
Gulf Coast.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard each Saturday at 8:00 PM (ET) and carried on VHF/UHF
repeaters throughout North America and on 160 meters at 1860 kHz.
Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
NOTICE: Due to the dissolution of the "Tech Talk Network", the
service WILL NOT be carried on satellite. Last minute negotiations
to maintain operations on Telesat Canada Anik E2 through SKYVISION
were unsuccessful. Discussions with other satellite carriers for
the donation or lease of satellite space continue in earnest. When
a new agreement is reached, "This Week in Amateur Radio" will return
to satellite air. Details will be posted as conditions warrant.

All affiliates are requested to contact the producers for further information.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (e-mail kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (e-mail sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Source record: 228110

As most of you know, "This Week in Amateur Radio" has been in operation from the Albany, New York area for over three years. Since taking over and dramatically restructuring the service, we have relied heavily on the generosity of various individuals and organizations to provide the satellite uplink capability that has been our sole means of distribution. That generosity has enabled us to serve the amateur radio community as the fastest, most up-to-the-minute news and information service in the activity. Satellite distribution has also been an "Achilles heel".

Our reliance on this cost-effective means of distribution has allowed us to keep our expenses to a managable level; a level that has been, for the most part, supported by our affiliates.

Conversely, our reliance on others to provide satellite space has forced us to endure numerous transitions from one satellite to another; from one network to another. As a result, we have been unable to maintain a stable base of affiliates and financial support to do much more than meet our day-to-day expenses. Each of these moves have been beyond our control. Due to the limited funding of the service, we were essentially not in control of our own destiny.

Such was the case this week when we learned that the "Tech Talk Network" was being dissolved. It was late Wednesday night when we realized that the wheels had come off, though a few of our affiliates were aware of this a day earlier. We would have again been the last to know had it not been for the alertness of those affiliates who brought the situation to our attention via email.

Much of Thursday was spent on the phone with representatives of Skyvision, Inc., the "Tech Talk Network", and the uplink site engineer. A tentative plan to maintain our operations on Telesat Canada Anik E2 was developed based upon the guidance of the parties with whom we had been in contact. By 6:00 AM Friday, a formal proposal to Skyvision had been completed. Thanks to the cooperation of all the parties involved, we remained optimistic that "This Week in Amateur Radio" would be on the bird for scheduled distribution on Saturday, April 6th.

Our intention was to gain control of our own situation; to take a more "pro-active" approach. The proposal we submitted, which allowed for and would have been subject to negotiation, was emailed to Skyvision representatives on Friday morning. Due to scheduling conflicts and a round of telephone tag, it wasn't until late Friday evening that it became apparent that our efforts had been futile. Skyvision has opted to withdraw their support of our efforts.

I sincerely hope that those involved see this explanation of the situation as fair and accurate. Since we at "This Week in Amateur Radio" have never had an axe to grind, an agenda beyond the

scope of our own production, or a discouraging word about any person or program connected with any of the three networks with whom we have been affiliated, we have made every effort to stay above the fray. From a journalistic standpoint, we are proud of our track record of fairness, accuracy, diversity, and longevity in reporting items of significance to amateurs throughout North America. Discussions with other satellite carriers for the donation or lease of satellite space continue in earnest. I encourage anyone with contacts within the TVRO/satellite communications industry to contact us. When a new agreement is reached, "This Week in Amateur Radio" will return to satellite air. Details will be posted as conditions warrant. All affiliates are requested to contact the producers for further information.

Hi
I will be leaving Easter sunday going to Southern California fo 10
days. Would like to take my dual band HT with, but I am wondering how
I should 'announce' my call on the repeaters in that area, so that
they don't think they are hearing me due to a propogation 'freak'.

Thanks for any help you can provide.

Please either post response here or e-mail me direct.

Thanks Again

Dave KB9MXD

Hello Brian,
Check out my pages, have been adding new stuff daily. Also
have quite a few more links to add, hopefully all will be in
there by the end of next week.

Take along a repeater directory - I find that a big help. When the repeater ID comes up, make sure the CW matches the call sign in the directory. Use this to say "This is KB9MXD portable 6 listening N6ICW Sacramento" or something to that effect.

I find that this works fairly well. Often outsiders are ignored when calling on a repeater, but if you take the time to let them know you are fromoutside the area and that you know what you're doing, that problem is diminished substantially. Good luck, and enjoy your trip!

I'm both a medical doctor and a VE team leader. I agree that this is unfortunately a problem, one I anticipated when I saw how the FCC implemented the handicap waiver. I filed comments to them on the waiver while it was still just a proposal, and included a 10-page addendum detailing some specific situations where I thought, based on my ham and medical experience (in a field - rheumatology - that deals with chronic disease & chronic disability) some conditions where I thought that waivers were & were not appropriate, in hopes they would provide some specific guidance. Unfortunately that did not happen. Not only that, they've hamstrung the VEs so that we are technically in violation of the rules if we ask the examinee ANY questions at all about the nature of his or her disability. Our team has had only a couple of disability waivers presented to us in the 5 yrs or so this rule has been in effect, and they were at sessions I did not attend for one reason or other. Something I've thought about doing, but haven't yet, to deal with the abuse problem is to contact the physician who signed the form (assuming I know him/her through my medical connections) & explain what is really involved to see if the alleged disability is legitimate or not, and attach a note to the FCC if it sounds like it isn't. That avenue though is one open only to VE's who are also physicians & I'm sure very few of them are.

It's a tough problem & one which is not likely to be fixed given the FCC's present total lack of interest in any type of enforcement.

4847. Info on Speaker Reapir Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-06 00:00:00 UTC
From: joseph massimino <joseph@gate.net>
Message-ID: <4k6kmk$245g@news.gate.net>
Source record: 228124

Hello, I have two sets of Acoustic Research speakers which I need to repair. Model AR18, and Model AR58. I bought both while in the Air Force in Germany many moons ago.

The problem is that AR used a foam ring around the cone of the speaker. The cone is ok, but the foam has disolved into nothing, leaving the cone attached to the magnet.
AR wants to charge me a bundle to replace all the speakers, but they suggested that I might want to have the speakers repaired. Does anyone know where I can get information on doing this, ie. a book, or newsgroup?

I imagine I could glue something in place of the foam, but I don't know where I would get it or what kind of glue to use.

Thanks for any help..

Web Site for West Coast VHF Conference Foxhunt

It's less than a month until southern California's second international-style on-foot foxhunt with cash and trophy prizes. Hope you're getting your exercise, practicing with your sniffing gear, and forming your teams.

The hunt will be Sunday afternoon, May 5, the last event of the conference. Also plan to attend the Friday/Saturday/Sunday conference itself, which includes a seminar on international-style foxhunting at 1 PM Saturday.

For more information, check out the VHF/UHF Conference Web site, provided by Mike Cramer KC6YHM. You'll find out all about the conference itself, plus the following foxhunt information:

*West Coast VHF/UHF Conference Foxhunt announcement
*Separate individual and team competitions at this hunt
*Overview of international foxhunting rules
*History and future of international foxhunting in the USA
*On-foot foxhunting equipment and techniques

It bothers me to think that a fellow VE team leader would feel this
way about the waiver.

However, I guess it is a reflection of the hierarchial nature of
licensing that some hams hold to. I.e., being a extra is better
than anything, and we have to do everything we can to keep out
the undesirables..or cw is better than (fill in the words) and
we cw people have to stick together.

Our jobs is to run the session and to verify/legitimate that which
we can *as hams.* We are not there to validate waivers, even if
you believe you have a right to question one as a doctor.

Well Brian, their products really are pretty good. But its the typical
Radio Shack employee that gives them a bad rap. Too bad Tandy didn't
attempt to recruit some electronic school students or freshly graduated
ones to sell for them. If they really paid a decent starting wage they
even might keep a few of them.

Then I got this one from another person. It seemed to him that the
bigger the city, the Blanker the stare!

Source record: 228133
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB PROP @ ARL $ARLP014
ARLP014 Propagation de KT7H

ZCZC AP35
QST de W1AW
Propagation Forecast Bulletin 14 ARLP014
From Tad Cook, KT7H
Seattle, WA April 6, 1996
To all radio amateurs

SB PROP ARL ARLP014
ARLP014 Propagation de KT7H

Solar activity remains very low. Two days last week, March 30 and 31, had a zero sunspot count, and as this bulletin is being written a week later the Sun is again spotless.

Over the next few weeks expect the solar flux to remain near 70, with possible mild geomagnetic disturbances centered around April 7 and April 17.

20 meters is the best daytime band, with the solar activity being too low to sustain much propagation on 15 meters or higher frequencies. 40 meters is the best band for worldwide communication at night, with low solar activity making this the best time of the solar cycle for 160 meters.

Regarding the end of this solar cycle and progress toward the next one, the latest projections based upon current conditions and previous solar cycles suggest that for the next few months we will be at the sunspot number minimum. The minimum is centered around April through June of this year, with sunspot numbers reaching the Fall 1995 levels in February 1997.

Previous bulletins have mentioned a 10.7 cm solar flux minimum centered around Spring of 1997, but the latest projection moves that period up a bit toward the current period. What it shows is a minimum based on an average flux of 72 for October 1996 through February 1997, with the flux also averaging 72 for June 1996. The projected flux for the dates in between is 73.

Spring of 1998 should present a radically different picture. By then the average flux will be climbing toward 100, and 10, 12 and 15 meters should be alive with activity again. In April 1999 the average solar flux is projected at 158, and 192 is the value for April 1999. The next cycle is projected to peak around the turn of

the century in August, 2000.

Sunspot Numbers for March 28 through April 3 were 24, 22, 0, 0, 13, 14 and 14, with a mean of 12.4. 10.7 cm flux was 71.9, 70.5, 70.2, 70.1, 68.2, 70.7 and 71.1, with a mean of 70.4.

From: Thomas.Smith@bbs.woodybbs.com
Message-ID: <454_9604061609@woodybbs.com>
Source record: 228134

Looks like I once again need help tracking down a pair of hams to get them their rightful QSL cards...

Here are the hams/callsigns and their last known addresses...NEITHER of which is any good (and I have the Return to Sender stamping to prove it in case there are any doubters):

N0IGP Terry Gorham P.O.Box 201
Huntington, NE

N8RR Charles Young 202 Hamlin Road
Broussard, LA

I need these two for my WAS - Gorham is reportedly now in South Dakota (he told me when we worked the North America QSO Party in January), while God only knows where Young is (envelope said No Such Street).

Any and all help on this would be appreciated; remember, the addresses listed above are NO GOOD, no matter what your callbook may say. Anyone with their current ones would help me out greatly in my quest. TX & 73!

If you're referring to the founding of the US government, Vince,
you are very wrong. Representatives, division of powers, and the
Constitution itself were all part of the plan to temper the whims
of the mob. The US is not a popular democracy, and was never intended
to be a popular democracy. It is a constitutional republic. It has
some democratic elements (and has unfortunately gained more over the
years), but that is not its purpose.

Only the House of Representatives was to be directly elected
to express the voice of the populace. The Senate was appointed
by the States, and the President was selected by electors selected
by the States. This was done deliberately, not because polling was
impractical, but because representation and reasoned debate served
to temper the whims of the mob. Our Founders wanted a limited
government that would do what was right and necessary, not what
was politically popular at the moment. Thanks to the electronic media,
and the current crop of politicians' attention to polls, this has
become less true in the latter half of this century, and the
republic has suffered as a result.

Popular sentiment is a yo-yo, easily swayed by the propaganda
of the moment. Popular democracies are unstable, and have failed
everywhere they have been tried on more than a very local scale.
Our Founders understood this, and made sure our government was
not a popular democracy. This is a lesson worth learning by
other organizations, and indeed those that have survived the
longest have eschewed direct popular democracy as their
organizational form. It's also a lesson worth remembering
with respect to our government, which has drifted away from
it to a dangerous degree.

> With respect to no-code, polling membership for a MAJOR
> decision that would affect the purpose and scope of the

> Let us not confuse "unworkable and bad government" voting
> arrangements with the bottom line of this issue.

Public opinion polls are notoriously unreliable, and unsuitable
for deciding this sort of issue in any event. This change in
licensing policy was one of *public* interest, not just of
interest to *current* members of the ARRL or the amateur radio
service. Its impact would be primarily on those *not* currently
members of the amateur radio service (or the ARRL). There are times
when representatives must act as Statesmen, taking the long range
view rather than following the whims of current members only. This
is one of those times.

> >Leadership, on occasion, is demanded and there are instances
> >when the leaders of a nation or a club must strike out
> >to blaze the trail.
>
> True enough, but besides blazing a trail, they may also
> burn theirs and our t(r)ails behind them. Elected

> do not always know the answer to a problem, nor do they
> always vote the will of the masses. From that standpoint,
> it can be said that ONE MAN's decision takes precedence
> in the present arrangement, and the resulting decision
> may be wrong. That's far worse than a binding referendum.

No. The experience with government has been that reasoned
debate among those whose job it is to be informed of all the
issues, and who are charged to make those choices which best
ensure the future of those who will follow after, is the best
form of government. Polls, whether straw or binding, are only
gauges of the popular sentiment of the moment, a reflection more
of emotion than of reason. They are not a sound basis for deciding

such issues.

No political decision is permanent. The final check on
bad decisions comes at the ballot box where representatives
can be changed if on the whole their decisions have been
shown to be bad after enough time has passed to judge that
fairly. That's why representatives have fixed terms, to allow
the temper of the mob to cool, and allow time for rational
reflection on the results of policy decisions. If those
decisions are found wanting, a majority of new representatives
can reverse them.

> >If the resultant decision was a bad one, then the body

> system, once that barn door opens, it doesn't close again.

We need only to point to Incentive Licensing as an example
of "restoring standards" which *did* occur (with disasterous
results) in the amateur radio service. You continue to ignore
this issue, but it is fact that the vast majority of amateurs
were stripped of their privileges and required to take new
tests in order to get them back under Incentive Licensing.
And we continue to suffer today under vestiges of that system.
Even today, we must pass a 20 WPM Morse speed test to get
privileges once held by those having passed only a 13 WPM
Morse speed test. You cannot deny this fact and retain
any credibility.

For once I must agree with Vince. The situation is out of hand,
and the time has come to fix it. The time for half measures has
passed. We must eliminate the divisive class system once and for
all or be tormented with this issue for decades to come, as we
have been for the last three decades.

While arguing about half-measures, I have long maintained that
the amateur radio service only needs one license, one class,
and that the vestigial Incentive Licensing structure which has
proved so divisive and damaging over the past three decades
should finally be eliminated.

Amateur radio licensing should address government's legitimate
concerns about regulating spectrum, no more, no less. It should
not be used to promote social agendas or historical anachronisms
irrelevant to the purposes of regulation. Those things determined
to be necessary and proper for amateurs to know should be tested
for *all* amateurs. Those things neither necessary nor proper
for all amateurs to know, need not be tested at all.

Beth,

Due to current international regulations, any amateur who plans to use the HF bands must pass "a" Morse code test.

In order for anyone to get a waiver, they must pass the 5WPM code test (ele 1(a)).

If there may be a problem with passing the 5, the FCC has made recommendations in the past on ways VEs can administer the 5WPM code exam. These include:

* The use of a flashing light instead of the dreaded tape.
* Pausing after each sentence, word or character to absorb the information.
* A sending test instead of a receiving test.

Once he gets the 5, then he can get a waiver signed by a MD or DO. The certificaiton appears on the Form 610.

I hope this helps.

Hi Beth, it is my understanding that there are no waivers for
the 5wpm requirement. Your friend might try Wayne Green's
method. At 5wpm, it's easy to just write down the dots and
dashes. Then during the multiple choice test, it's easy
to translate what one needs. The state is after the comma,
the city is before the comma, there's a number in a call,
power report, RST report, address, etc. Good Luck.

4865. Mobile Telephone Service via Radio?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-07 00:00:00 UTC
From: nenad@athene.cs.rice.edu
Message-ID: <4k7dem$8d7@larry.rice.edu>
Source record: 228142

A cousin of mine lives in Yugoslavia, where the cellular phone service is non-existent. He claims that it is possible to use radio connections to establish mobile telephone service. Apparently, one unit and an antenna would go on the car, and the other unit would be somehow hooked up to his regular phone line. The power output would be 50W (for the base station?) and the range around 50 miles.

He's seen this work for other people, but he has no clue about radio technology (and neither do I). Despite the fact that he can't precisely describe the necessary equipment, he wants me to buy it for him.

Can somebody please help me figure out how this is supposed to work (if at all), and what kind of equipment is needed.

Thanks.

>
I realize that our job as VE's is to run the sessions as fairly as possible. I have not & never would confront someone at the time of a test with questions about the legitimacy of their form even if I was SURE it was fake. (I've been through a forgery experience in a test session before, where someone presented a bogus CSCE, and learned then that the best way is just to accept the paperwork at face value & raise the questions later to the VEC &/or the FCC!) It isn't fair to either the applicant, who is no doubt nervous about the test itself, nor to the other examinees who may be present at the time, to create a disruption at the test session.

However, I stand by my position that many people presenting disability waivers really do not have a disability that SIGNIFICANTLY impairs their ability to learn CW. By the same token, many people seeking other forms of disability, including Social Security, SSI, disabled persons license plates etc, likewise do not qualify - I see this every day in my work! Also, there is a subtle financial pressure on doctors to sign the 610 waivers ("if you don't sign my form I'll fire you as my doctor & go somewhere else where they will sign it!") The fact that I'm primarily a CW operator has nothing to do with my thoughts on this subject, just personal experience over the last 18 years of medical practice.

>BTW if there are observations of inappropriate use of the "severe
>handicap" code waiver provision on applicaations for FCC licenses
>being exhibited in your area?

since the waivers started, i can think of only 3 people (out of the 15-20 candidates per month we see typically) over the entire period that have applied for waivers. One was accepted and supplied a quantity of paperwork from a variety of clinics documenting his condition. One didn't pass the written (yet). and I wasn't involved at the time (didn't have the extra license yet) but I understand there was one that bounced due to the supplied paper work not checking out during review.

and this in an area with a fair number of retirees.

>Here, we do have individuals able to find hapless medical doctors
>willing to approve the form for the license application for medical
>reasons, cannot learn the code. Reports locally I am told seem
>somewhat minor, or at least not severe handicaps.

not my call as a VE to make. probably my limits would have to be no more than a check to see that the doctor was really a practicing doctor, but that information would go in separately for the downstream folks to check out for sure.

> One example is a guy (KC5QLI, advanced nocode license now) with a
>hearing disorder he calls tinitius, who is very active on the bands

tintinitus is a ringing in the ears. and he did have to pass 5 WPM. he might have a legit problem with that condition and if the docs sign off on it, it's not our job to give him grief over it. i'm not in a position to argue about his ears.

>and able to hear voice perfectly well, but cannot learn the code.

voice contains several components that might work around any single flaw the person might have that keeps a morse note from being discernable. The other thing to remember is that the guy you're complaining about is just starting -- if you had the ears you have now back 30 years ago, would you be able to *learn* to copy code?

>I have disucssed the topic with licensed professional public school
>administrators working in the field of special education, who are
>also licensed radio amateurs, who all say this situation is being

i'm tempted to do something along the lines of radio history or similar detail
just to have a test that isn't the "cookie cutter" code exchange.

maybe something like text from the first 50 years of Collins Radio, or an ad
from a 20 year old 73 with some additions to work in the right number of
letters and symbols. anything but a QSO...

then you could have questions like:
what building did Collins start his business in?
what month/year did w2nsd go to jordan?
when did armstrong invent FM?
what was the name of armstrong's FM radio network?
what score did johnny petragila have on 4/6/96?
who did petragila lose to?
what year was the first 7-10 picked up on national TV?
who picked up the first 7-10 on national TV?
which tire is flat on the sending operator's car?
who is the manufacturer of the sending operator's aircraft?
what is the sending operator's favorite sport?
what is the receiving operator's radio club's name?
who was the speaker of the house?
"Fan boy" is the loyal sidekick to what super hero?
What is the first name of the Centari Ambassator to Babylon 5?
When did Susan Ivanova's father die?
Who made the first commercial transistor radio?
Who was Norman Corwin?
Who was Alfred Bester?
Who played Frank Poole in "2001: A Space Odyssey"?
What is the gm of a 40673 the sending station measured?

Which Model are you trying to use? I have one that has a dynamic mic
element, and all I did was to bypass the electronics, and feed the radio,
Kenwood TS-940, direct. The output is lower than most dynamic
elements, but it works good.

>a book, or newsgroup?
>
>I imagine I could glue something in place of the foam, but I
>don't know where I would get it or what kind of glue to use.

This is not a simple procedure, Joe. You can of course just
glue something in there to replace the suspension, but unless
the compliance is exactly the same as the original, the speaker's
characteristics will be changed. In particular the free air
resonance of the speaker will change, and that impacts the
enclosure design, and bass response, dramatically.

If your goal is just to have drivers that make noise without
rattling, then go ahead. But if you want to restore the speaker's
high fidelity character, then seek professional help. I'm slightly
surprised that AR doesn't offer a reconing service, many manufacturers
do, but there are outside reconing services available. Check with
local audiophile stores, or on one of the audiophile news groups
for a pointer. Note that a good job won't be cheap, so just buying
replacement drivers from AR may be the best course. Reconing is
usually reserved for rare or discontinued drivers.

Has anybody ever heard a possibility to talk direct to somebody's ears/head from 200 kilometers away? What kind of equipment is needed for that? What kind of transmitter and receiver you would need for that to suprise somebody totally? The receiver at least should be as small as possible and not to notice easily.

What about radio waves genarally? What you need to catch them from the air? How is the right frequency adjusted? What kind of traffic in the air is possible to follow? Are there frequencies that are not allowed to listen. How is that prevented?

Yesterday (Saturday 07 APR) I tried to receive the AO-27 downlink on 436.800 MHz, but didn't hear anything. I listened from 0900 local time to 1800 using a Radio Shack PRO-2006 scanner in FM narrow mode. The receiver was programmed to search from 436.750-436.850 MHz in 5 KHz increments. The antenna was an outdoor sloping dipole for 35 MHz (it works from 30-950 MHz). Also, my squelch was set very low so a weak signal would break squelch.

Any idea what the problem is?

It doesn't really work in any of the hierarchies. Too many of them are
malicious, and most news administrators have set up their systems to
merely record them as mail to the administrator who can then judge
whether they are valid or not, and act or not act on them accordingly.

>> Some one -thought- they were needed, so he created them. That's who the
>>alt.* works. Many sites don't carry them (only one of the four places I

>>
>Exactly. I'm pretty sure that tha alt.ham-radio groups predate the rec.radio
>groups, and we've all migrated here. If Gary Coffman is reading this, he can probably
>give a definitive answer (hint, hint)

Well, I suppose I can. Once upon a time....

The first ham groups on usenet were in the ham-radio.* hierarchy,
which later became the rec.ham-radio.* hierarchy as usenet grew.
They did not start in alt, and indeed the alt hierarchy wasn't even
a gleam in someone's eye when the rec.ham-radio groups were founded.

Then came the Great Renaming, and the old and familiar rec.ham-radio groups became the rec.radio.amateur.* hierarchy we have now. There was great wailing and gnashing of teeth among the old timers at the change, but it was democratically voted, and the news administrators duly deleted the old hierarchy from their servers and created the new one. (Some administrators are lax, and I note with some amusement that there are still messages being posted to the now very defunct rec.ham-radio.packet group circulating on usenet looking for a home. On most systems, they find it in *junk*, the usenet equivalent of the dead letter office. Subscribe to junk if you want a laugh. You better read quickly and often, however, I set expire on junk to be 0.1 day, others do likewise.)

The alt hierarchy doesn't require a vote for a group or groups to be created. Any news administrator can generate a newgroup message, and many servers will automatically honor it. IE it is true anarchy and chaos. One of the old timers whose teeth had gnashed, recently thought that an alt.ham-radio hierarchy would be a dandy idea, so he launched a bunch of newgroup messages into the network, and viola, instant alt.ham-radio hierarchy. There was much wailing and gnashing of teeth among some of the more control freak news administrators, and Brian has been suitably chastised. These groups will likely slowly disappear from servers as administrators note no activity in them.

Alt is so chaotic that many news adminstrators have instructed their systems not to automatically honor a newgroup request for creation of a new alt group, or refuse to carry alt groups at all, so this whole tempest in a teapot only affected a limited number of servers.

I allow automatic alt group creation on my server, but I also have a demon which deletes any group that hasn't shown activity in a month. So the bogus groups don't stay around too long.

>
>Can somebody please help me figure out how this is supposed to
>work (if at all), and what kind of equipment is needed.

The first thing to do is to find out what is permitted there, and on what frequencies. That will determine what equipment you need.

Here in the US, there was a service called IMTS which used 50-100 watt mobile duplex radios which connected to base stations owned by service providers (the local telephone company) to allow mobile users access to the telephone network. It would be feasible (though not legal here) to have the base station at a private home connected to a private telephone line instead. IMTS has been superceded by cellular here, though a few IMTS systems still remain in operation. Most of the equipment has been dumped on the surplus market, and you could likely get it cheaply. There were two types, VHF and UHF, so you have to get the right kind to fit the Yugoslav bandplan, if any. It wouldn't do to fire up a mobile phone system on a frequency used by the local police or military. They'd take a dim view of that.

Alternatively, he may be trying to describe a phone patch system. Amateurs, and some commercial users, do that here, usually with a phone patch equipped repeater, but also with private patch equipment hooked to a residential phone line. This is somewhat restricted compared to commercial or cellular practice by regulation for amateurs, and is usually operated half-duplex, IE you have to say "over" and release a button

to change from talking to listening. Equipment to do this is
also widely available, and not expensive.

But the first thing you have to do is to find out what the
Yugoslavian government permits. Then you can come back and
ask about equipment specifics. It wouldn't do for your cousin
to wind up in jail because he violated a local regulation.

Source record: 228171
Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur

Don't even try to compare the internet to the Amateur Service. I don't know about the UK but this group is called rec.radio.amateur.misc here in the US. If the silly buggers using the internet had to take a test before posting, half would be gone for simply not being able to read. Another fourth would be gone for not being able to write and that would leave the rest. Since this is a read ONLY if you want to group, simply delete or skip the messages you don't like. And since the internet is open and not censored, fuck em. I wouldn't say that on two meters, ten meters or even 20 meters, but it is NOT against the policy here, I believe.

->
-> 73, Jim KH2D

You can " ' show up ' and operate" in Canada, as well. Not quite a U.S. territory, yet, though the multinationals and financiers are doing their level best. All a U.S. ham has to do in Canada is I.D. with his own call and " Portable VE4", for instance, in Manitoba (or as appropriate for the mode in use). Exact operating priveleges are determined, of course, by how fast you can send Morse but these details shouldn't trouble anyone sticking an HT into his carry-on bag.

: Welcome to the Internet. I once saw it described in a cartoon as a
: 12-lane superhighway gridlocked with garbage trucks. That is too harsh,
: but it often applies. The "Net" is a self-selecting group of people.
: Some of us are on here to exchange ideas and get information. Many
: others simply like to debate or lecture, and will often provoke others
: just for the sheer pleasure of a good fight. And because people are
: not face-to-face, they will indulge in rudeness most would never
: think of doing in person.

: Remember Theodore Sturgeon's Law: "Ninety percent of everything is crap."
: That applies here, too. Since it's easy to scream at the whole world with
: a few keystrokes, there's a lot of nonsense posted.

: The best thing you can do is ignore or filter out the garbage, and get
: what you can out of the other ten percent. A news reader that sorts
: messages by subject lets you select only what interests you. A "kill
: file" lets you filter out subjects and authors you don't wish to
: encounter again. Used wisely, they make the Net much more pleasurable
: and informative.

: But I must say I'm glad I'm online. Every so often I pick up a good
: technical tip. I keep in touch with happenings in the classical music and
: theatre world, and even made a couple of lasting friendships online. I
: learned most of what I know about satellites on the Net. I've had a ball
: watching Comet Hyakutake using a star chart and schedule I downloaded from
: the Web, and I've been looking at comet pictures from all over the world

: (with stuff like that, who needs pornography :-)

: After a while, some people's outrageous behavior will cease to bother you.
: It just comes with the territory--and sometimes it can be good comic relief.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 APRIL AND FORECAST FOR 08 APRIL - 10 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 06 Apr
Daily Proton Fluence >1 MeV: 3.5E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 3.1E+06 (normal)
X-ray background: A1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Apr 09 Apr 10 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Apr: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 06 Apr
Learmonth 3 2111 1111
Fredericksburg 2 3
Planetary 4 3

Observed Kp for 06 Apr: 1111 1111

2B. MAGNETIC FORECAST
Date Ap Conditions
08 Apr 10 Quiet to unsettled
09 Apr 14 Unsettled
10 Apr 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 6 was issued on 4 April and
is current for interval 7-10 April. Expected increase in geomagnetic
activity did not eventuate. Chance for mild activity on 9 April.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
07 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
08 Apr Normal Normal Fair
09 Apr Normal Normal Fair
10 Apr Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
07 Apr 5

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
08 Apr 5 near predicted monthly values
09 Apr 5 near predicted monthly values
10 Apr 5 near predicted monthly values
COMMENT: IPS HF Communications Warning 11 was issued on 4 April
and is current for interval 8-10 April, however degraded
conditions are now not expected. Forecast degraded HF
conditions for mid-high latitudes did not eventuate.

4907. Amateur Radio Callbook CD-ROM MS-Windows Program

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-07 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.244.20@bytewise.org>
Source record: 228184

Subject: RAC 'n Rollup Callbook Software Demo Released.
Date : 1996 - Sun. Apr. 7 15:30 Local/ Sun. Apr. 7 19:30 Zulu
From : Steve Hajducek, N2CKH
TO : ALL RADIO AMATEURS

The Demonstration/Sharware version of RAC 'n Rollup is now available for all interested parties.

RAC 'n Rollup is an MS-Windows based program which acts as a front end for the excellent Radio Amateur Callbook, Inc. CD-ROM database released in November 1995.

Users enter a U.S. or Foreign callsign (no need to select database) and when found all information is displayed. The user can queue data for mailing label printing or copying to the clipboard. Provided are full country resolution with a custom prefix search engine that works with callsign lookup or alone. Also provided is the County, Continent, CQ Zone and Grid Squares for U.S. stations. No grids are provided for foreign callsigns. Full mailing label printing is supported as is copy to the Windows clipboard. Additional needed features such as mailing label Callsign printing ON/OFF and others are provided.

RAC 'n Rollup is a subclassing rollup type application, which means that when it is not in use, it takes up only its caption bar height and width, but is immediately ready to use. The program featues an uncluttered user interface with graphical icons and makes use of a modified system menu for its program menu.

The purpose of the DEMO version of RAC 'n Rollup is to allow as many people as possible to opportunity to experience the software without any obligation to purchase. The demo does NOT print or copy to the clipboard. It dows however allow full access to all databases for up to six (6) queries at a time.

The DEMO version has NO registration fees and NO support is offered.

It is available on the support BBS at 1-908-363-2760.

It has also been uploaded to the ARRL BBS and the KENWOOD BBS.

The file name is RAC_DEMO.ZIP and is 1.3MB is size and takes about 5 minutes at 14.4KB using Zmodem protocal. It will be placed on various FTP sites as time permits.

Please do not hesitate to e-mail any comments or bug reports, my desire is to provide the best possible product to the Amateur Radio

community as I can.

RAC 'n Rollup now shipping and is only $ 9.95 U.S. plus $ 1.50 U.S. shipping/handling in the U.S. or $ 5.00 shipping/handling overseas.

Send your orders with Callsign, e-mail address and mailing address to:

RAC 'n Rollup
C/O Stephen B. Hajducek
U.S. Post Office Box 8
Morgranville, New Jersey
07751-0016

Please makes checks or money orders payable to Stephen B. Hajducek.

Thank you.

/s/ Steve, N2CKH

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Alt is so chaotic that many news adminstrators have instructed their
: systems not to automatically honor a newgroup request for creation of
: a new alt group, or refuse to carry alt groups at all, so this whole
: tempest in a teapot only affected a limited number of servers.

: I allow automatic alt group creation on my server, but I also have
: a demon which deletes any group that hasn't shown activity in a
: month. So the bogus groups don't stay around too long.

A good philosophy. The alt.ham.radio.* hierarchy showed very little
activity, so I unsubscribed after a while. Fortunately, both of my Internet
providers carry all 16,000+ newsgroups. I like that philosophy, in that it
allows the individual user, and not the newsadmin, to control what he reads.
I would not stay long with any provider that tried to make my decisions for
me, given the wealth of providers in this area. Of course, we along the
west coast are blessed this way; much of the rest of the country is not.
I realize that many must take what is available, which may be their
employers system, or a university system.

There *is* a lot of crap in the alt hierarchy, but sometimes it is the only
way to get a group going, other than a mailing list. For instance, one of
the few alt groups I subscribe to supports my brand of PCs. This is the
best way to get answers to frequently-asked questions, and is [was?] the
best way to obtain tech support, without spending a lifetime on hold.
It is also a way to get a newsgroup started quickly, without having to
defend its purpose, or go through the lengthy bureaucratic channels to form
a newsgroup otherwise.

Walt Davidson (walt@servelan.co.uk) wrote:

: You bet you wouldn't say it on the air, or you would have an FCC
: citation in the mail next morning .... yes, even in your beloved "Land
: of the Free".

Obviously you do not realize that the FCC has done little in the way of enforcement in quite some time. There is a local 2 meter repeater that many of us avoid because of the foul language used. What has the FCC done about it? NOTHING! Hams in the US have even gone so far as to document illegal operation and present it to the FCC, and nothing has been done. Hams here have often found the civil courts to be the only solution. Most hams now see the FCC as a paper tiger, definitely without teeth.

: As someone has already pointed out, the US Constitution's First
: Amendment does not apply in the United Kingdom. As its principal use
: nowadays seems to be to justify antisocial behaviour (and just plain
: rudeness), I think we are fortunate in *not* having a First Amendment
: here!

Well, to each his own. As someone who has grown up with all of our basic freedoms I have difficulty understanding why anyone would want it to be otherwise. The abuse of these freedoms by a small minority is the price we pay to have those freedoms.

: >The people at HRO are downright rude when I ask about
: >220 gear!

: Sounds like they don't mind missing a sale!

I would be interested to know which HRO store this gent was talking about. At the one I go to most often [Anaheim] they not only sell 220 gear, but one of the salesmen I usually talk with was lamenting the fact that Icom had discontinued the only 2m/220 mobile rig that had previously been available.

From time to time, we hear of rudeness at HRO, AES and other ham-oriented businesses. I have to wonder what sort of attitude the customer went in with, to provoke such comments. Every time I have visited the Anaheim store, it has been a pleasure.

_____________________________________________

1.0 What is BASIC Stamp ?
-------------------------

This is being written for people who have no idea of what a BASIC
Stamp is...

BASIC Stamps are small reprogrammable single board computers (SBC)
that run BASIC programs and are made by Parallax, Inc. in US. At
first glance, they may seem fairly minimal - and in fact, they are.
But with software that fully utilizes all available hardware, the
Stamps give you powerful features - without the cost of hardware.

Their low cost and simplicity make the Stamps perfect for many
prototyping and control applications. It's suitable for electronics
hobbyists as well as electronics professionals in many different
areas.

Typical application areas for BASIC Stamp's are...

- General electronics
- Home automation
- Robotics
- Mini PLC
- Education
- Prototyping
- HAM related applications
- Special effects in films
```

- Industri control
- Geological instruments
- Computer peripherals
- Scale model hobbyists

As an talent engineer and technical writer expressed it...

- BASIC Stamp is the 555 of the 90's !

1.1 What is L.O.S.A all about ?

I started to compile L.O.S.A because I know there are lots of great ideas and many problems that are solved with the BASIC Stamp and the main purpose of this list is to get an idea of what other people are using their BASIC Stamps for and maybe get some inspiration or hints.

Remeber it's up to all of us if this list are going to be any good and I'm looking forward to receive a description of your application.

1.2 How can I contribute to this list ?

If you have done something with the BASIC Stamp (big or small) that you are willing to tell others please use the form given below and write a short description, nothing fancy is needed just a simple explanation. If you have source code to share that's even better but it's not necessary.

Then e-mail the form to:

cj@hth.com

With the following as the subject:

L.O.S.A Contribution

Or you could point your Web-browser to the following URL and fill in the L.O.S.A form on the Web-page...

http://www.hth.com/losa.html

[--- cut ---]

==========
Title : Robo-Cat [# 001]
==========
Date : 950807
Author: Gustavson Guy W.
E-mail: GWGUSTAVSO@mpg.norstan.com

Stamp model : BASIC Stamp Rev. D
Code available: N/A
Filename : N/A
URL : http://www.winternet.com/~bigfoot/cat.html

Description :

My cat, Kesha, was recently diagnosed with Heptic Lipodosis. Or
"Fatty Liver", basicly what this means is that for some reason he
stoped eating and his liver started converting body to useable
sugars. The fat deposists biuld up in the liver and cause severe
liver damage. Because the liver isn't working well the cat feels
crappy and wants to eat even less. The treatment for this disease is
to run a tube down down the cats nose into his stomach, or a PEG
tube through the abomine wall into the stomach and feed the cat a
liquid diet this way.

I love my cat, but I can't be there every three hours to feed him
through the tube for a month. Something about work and deadlines and
such. So I went to a local supplus house and got a tiny motor driven
pump, a case, some switches, a micro switch, ect...

The micro switch is mounted such that the switch trips for every
rotation of the pump shaft. The stamp turns on the pump for on a
single rotation at intervels programable from the controll switches
on top. An alarm buzzer and LED flash if the pump fails to run for
any reason. The unit is programable for 9 differents deleviery rates.

Now he gets a slow continuious feeding and he seems to tolerate this
better than the 100ml feeding every three hours.

==========
Title : Logic Rudder [# 002]

==========
Date : 950812
Author: Christer Johansson
E-mail: cj@hth.com

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : LRUDDER.ZIP
URL : http://www.hth.com/filelibrary/BS1-IC/

Description :

Many of the new and very realistic flight sims available today needs rudder to let you get full control. This one uses a digital pot from Xicor (X9104) and 10 other components. Connects to a standard IBM-PC game port and power is taken from the port.

It uses two micro switches for controlling the rudders left or right and to indicate when rudders move there is a red LED that lights up when you press the micro switches and to indicate center there is a green LED. If you press the both micro swithes the rudder will automaticly return to center position.

There is a trim pot to set the desired step rate from slow to very fast and the Xicor pot has 99 steps wich gives a fair resolution.

==========
Title : Interfacing MAX186 8 channel 12bit A/D [# 003]
==========
Date : 950925
Author: Helmut Fligge
E-mail: h.fligge@asco.nev.sub.de

Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : N/A

Description :

This Program interfaces the Stamp1 to the MAX186 A/D converter. Via RS232 2400bps the stamp is asked to measure channel numbern. After conversion the result will be returned to the host computer as an ascii string (0 .. 4096). Conversion rate is about 4 measures per second.

==========
Title : Scrolling LED Sign [# 004]
==========
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org

Stamp model : BASIC Stamp Rev. D
Code available: Maybe sometime
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html

Description :

Scrolling LED sign, 35 super-bright LEDs in a 5-by-7 matrix in the prototyping area of a Basic Stamp rev D. A scrolling alphanumeric message moves one pixel at a time, just like real scrolling LED signs, except this one only displays one full letter or portion of two letters at a time as the message moves by.

==========
Title : Tone Decoder [# 005]
==========
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org

Stamp model : BASIC Stamp Rev. D
Code available: Soon
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html

Description :

Listens for telephone touchtones, displays phone numbers on LCD screen and echos them out RS-232 port. Circuitry fits in prototyping area of rev D Basic Stamp:

Microphone preamplifier, touchtone decoder IC.

==========
Title : Pager [# 006]
==========
Date : 950928
Author: Don McKenzie
E-mail: donmck@tbsa.com.au

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : PAGER.BAS
URL : http://www.labyrinth.net.au/~donmck

Description :

This program for the Basic Stamp is used to monitor 4 hardware signals. If a change takes place, (after testing for a false trigger) then a cheap 2400 baud MODEM is used to dial into a Telecom Alpha-Numeric pager. It leaves a message which consists of a 2 digit

I.D. (01 to 99) followed by the 4 signal levels of pins 3 to 0.

Status of the signal levels message: 0=Low, 1=High. EG: "011110"
means Unit "01" has pins 3, 2, and 1 high, and pin 0 is low.

A "Ring-In" feature is also included. By ringing the MODEM for a
short period, then hanging up, the Stamp will dial your Pager and
report the current hardware status of these four signals.

This program uses about half of the available memory, so if the user
wishes to add enchancements such as "Multiple Ring-In's" say within
a minute, for a command selection, there is plenty of program space
left.

==========
Title : HexWalker Mobile Robot [# 007]
==========
Date : 950929
Author: T. R. Thornton
E-mail: mandtsys@ix.netcom.com

Stamp model : BASIC Stamp Rev. D or BS1-IC
Code available: YES
Filename : WALK.BAS
URL : N/A

Description :

HexWalker is a six legged mobile robot that is controlled by a BASIC
Stamp or BS1-IC, and driven by three servo motors (similar to Futaba
S148). It is the simplest walking machine architecture that can walk
forward, backward, and turn left or right.

==========
Title : Robo Bug [# 008]
==========
Date : 951003
Author: David Novick
E-mail: dkn@cimar.me.ufl.edu

Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : http://www.me.ufl.edu/~dkn

Description :

Using two stamps, a robot with six legs (2 degrees of freedom each)
was able to walk and turn (at this stage, not very gracefully).

==========
Title : EXPBOT Robot controlled by Stamp [# 009]
==========

Date : 951009
Author: Marvin Green
E-mail: marvin@agora.rdrop.com

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : EXPBOT.BAS
URL : E-mail author and he will send it

Description :

This program allows a cool robot to move abound a room in search of light. Like a moth. Simple program changes can dramatically change the robots behavior.

==========
Title : Andrews Ever Evolving Lego Robot [# 010]
==========
Date : 951119
Author: Andrew H. Hochheimer
E-mail: softarts@ciaccess.com

Stamp model : BS2-IC
Code available: YES
Filename : N/A
URL : http://www.wincom.net/~softarts

Description :

Currently the robot can only navigate to the brightest light source in a room. It's current operation mode has four major steps: - Scan a 180 Degree Field of "Vision" taking light level readings, and determining the brightest direction of light. - Decide if it needs to turn left, right, or continue moving forward. - Check for collision with an object while moving, if a collision occurs, display the total travel distance on the display - Move forward for 1.5 Seconds and then repeat the process.

Currently I am using Two Futaba FP-S128 Servos (any RC Car Servos would work) one to sweep it's "sensors" form left to right, and one to "stear" the robot.

You can see pictures and more information on my homepage, just follow the lego robot link.

==========
Title : Factory Monitoring System [# 011]
==========
Date : 951120
Author: Paul Willemse
E-mail: pjwill@merlion.singnet.com.sg

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : N/A
URL : E-mail author

Description :

The system presently consists of 4 Basic Stamp units. Each monitors up to 5 inputs. The inputs are 'digital' (switches) and/or analog (temp, airflow, current, etc using commercial sensors). All stamps communicate the results via serial mode to a Macintosh (Yes a Mac!) where the results are graphically displayed and monitored. Alarms are set for certain conditions.

The transmission is simple, one way only. Each stamp sends the info at a 'random' interval not exceeding 2 seconds. The message format is fixed, the Mac will throw away any conflicts in case two or more stamps transmit at the same time. BTW this happens very seldom. The max time any stamp can be 'absent' from the chain before an alarm is raised is six seconds (failure, transmission collisons, etc). This is controlled by the Mac.

The 'system' is presently in beta test, the client wishes to expand up to 20 stamps. At that point we will likely use the BS1-IC or BS2-IC on custom boards located around the facility.

Code is available upon request (e-mail) partial, some is proprietory to my client.

==========
Title : Wave to the Cats/Desk Temperature [# 012]
==========
Date : 951121
Author: Paul Haas
E-mail: paulh@hamjudo.com

Stamp model : BS1-IC
Code available: Yes
Filename : See web server
URL : http://hogwild.hamjudo.com/cgi-bin/stamp

Description :

The Stamp has a serial connection to web server, a cardboard hand, a servo motor to move the hand, and a DS1620 thermostat chip to measure the temperature. The web server can request the current temperature or start the hand waving. See the web page for the source code for the temp and the web server.

It's mostly useless. The cats ignore the hand. A few people find it entertaining.

```
=========================================================================
Title : Gamer's Die Roller [# 013]
=========================================================================
Date : 951122
Author: Larry Tremblay
E-mail: ltremblay@domus.com
-------------------------------------------------------------------------
Stamp model : BS2-IC
Code available: N/A
Filename : N/A
URL : N/A
-------------------------------------------------------------------------
Description :

The Gamer's Die roller is a little thing I am putting together as my
first Stamp Project. The Roller allows cumulative rolls of n dice up
to 256 sides, so long as the sum does not exceed 99,999,999(!)

It uses two 74HC161 4 bit counters cycling at 1MHz to draw random
numbers off of. Input is achieved via a Grayhill model 38 keypad
and a 74C922 keypad decoder. Display is on a Siemens PDSP-2111 8
character smart display (5x7 LED characters) fed by two 74HC164
serial to parallel shift registers cascaded so I can use Shiftout to
feed 16 bits of control + data off of 2 pins.

The code is very simple, the most exotic part being the random numb-
er generation. In a nutshell, it is:

Begin Loop
S = 8 bit number drawn from the counter (random)
if S < (255/N) x N (integer divide, N is number of sides on die)
exit Loop
End Loop

This gets (pseudo) random numbers whose average is not skewed
downwards by the counter's max of 256 (i.e. a 100 sided die is not
affected by the extra 56 in the count maximum)

Using gamer's dice notation, (5d6 = sum of 5 six sided dice, 3d10 =
sum of 3 ten sided dice), the user can input whatever combination
they wish, including just 'd6' for one six sider. The keypad I have
has removeable keycaps with legends, so I have 0-9 plus 'd' and '='
on them.

As noted earlier, since I am using an 8 bit counter, the maximum die
size is 256, although that could be fixed easily by sampling two,
three or more times for each die.

Anyhow, that's it. When the code is done and debugged, I'll be happy
to e-mail it to any who want it.

=========================================================================
Title : Stamp II Serial I/O [# 014]
=========================================================================
```

Date : 951128
Author: John Hansknecht
E-mail: Hansknec@cebaf.gov

Stamp model : BS2-IC
Code available: Yes
Filename : HAL01.bs2 and HAL01.bas
URL : ftp.parallaxinc.com

Description :

A bare-bones demonstation of 2 way serial communications between a
PC running Qbasic and 1 or more Stamp II's.

==========
Title : Voice and CW Fox Hunt Transmitter IDer [# 015]
==========
Date : 951221
Author: Sam Guccione
E-mail: sguccion@outland.dtcc.edu

Stamp model : Counterfeit Stamp
Code available: Yes
Filename : Revision of S. Edwards MORSE program
URL : N/A

Description :

An IDer based upon the MORSE program. Has 4 time delays as well as
a random time delay. Circuitry includes selection of a voice id
using the Radio Shack 10 voice board or the Walden bookstore 10 sec
talking gift card. This is a very simple circuit and program but was
developed by my students under my direction.

May be of interest to someone out there.

==========
Title : Lift (elevator) Controller [# 016]
==========
Date : 951225
Author: Dave Bell
E-mail: dbell@cup.portal.com

Stamp model : Faux Stamp (BASIC Stamp clone)
Code available: Yes
Filename : Upon request
URL : N/A

Description :

A simple control loop monitoring lift Call buttons (with debounce)
and Limit switches, forbidding manual control past limits, and en-

forcing a Stop before reversal of direction. This will be used in
an owner -designed and -built single story platform lift for a home.

==========
Title : Paging with the Stamp [# 017]
==========
Date : 960104
Author: Kurt Clement
E-mail: kclement@kraft.com

Stamp model : BASIC Stamp Rev. D
Code available: Yes
Filename : monitor.bas
URL : N/A

Description :

Use the Stamp to monitor several inputs, two temperature and two
contact closures in this application. When inputs go outside set
limits, dial pager and send coded message. Used to monitor power
failures and temperatures for computer and network equipment since
August 1994, running on 9 V power supply from one of the UPS units.

==========
Title : Switching Sytem [# 018]
==========
Date : 960109
Author: Alexander Avendano
E-mail: aavendan@aros.net

Stamp model : BS1-IC Module
Code available: N/A
Filename : N/A
URL : N/A

Description :

I'm almost finishing a Basic Stamp Based Switching System (Small
Phone system) which I consider very usefull for small companies that
cant'n afford other brands. This is designed with a host computer
which will have a vox-mail and all the functions like big ones to
choose. I'm using BS1-IC's for the extensions process right now.

As soon I have complete it I will give the code away for small
Intelligent Switching phone system up to 2 Lines and 4 Extensions
using the L.C.D serial circuitry for information display. I forgot
to mention that the computer (Host for many processing functions)
will be running under Windows 3.1 and Windows 95, making this way a
usefull computer not only for the phone system but for ithers
application at the office.

Please be free to send me E-mail, about any suggestion.

```
=============================================================================
Title : Door Entry Card Reader [# 019]
=============================================================================
Date : 960110
Author: Ed Buckley/J J Barbarello
E-mail: ed@milinst.demon.co.uk
-----------------------------------------------------------------------------
Stamp model : BS1-IC Module
Code available: YES
Filename : N/A
URL : N/A
-----------------------------------------------------------------------------
Description :

Stamp 1 based version of the Card Reader article by J J Barbello as
described in the August 1995 edition of Electronics Now. This vers-
ion uses the Stamp 1 as a local controller determining the card
number and deciding whether or not to allow door opening. Optional
serial comms back to a master controller and optional local message
readout using an LCD Backpack.

Lots of scope for further enhancement/experimentation. Circuit
schematic and listing available.

=============================================================================
Title : Telephone Card Reader [# 020]
=============================================================================
Date : 960119
Author: Francesco Volpe
E-mail: f.volpe@ee.mu.oz.au
-----------------------------------------------------------------------------
Stamp model : BS2-IC Module
Code available: YES
Filename : TELEMARK.LZH
URL : ftp://ftp.ix.de/pub/elrad/010/
-----------------------------------------------------------------------------
Description :

The BS-II is used to read a German telephone card, which is a smart
card. For more details see the German Electronic Magazine ELRAD
(http://www.ix.de/el).

The data is transfered via RS232 to any terminal program.

=============================================================================
Title : DTMF Decoder [# 021]
=============================================================================
Date : 960125
Author: Joe Altieri
E-mail: radioman@banished.com
-----------------------------------------------------------------------------
Stamp model : BS2-IC Module
Code available: YES
```

Filename : DECODE.BS2
URL : N/A

Description :

A new parallax BASIC Stamp II program for decoding a nine digit DTMF sequence of "Touch Tones" for remote activation/de-activation of any electrical appliance via Ham Radio, radio link, telephones, intercoms, etc.

==========
Title : Ion chamber radiation monitor [# 022]
==========
Date : 960125
Author: Jeffrey L. Rothman
E-mail: rothman@bnlls1.nsls.bnl.gov

Stamp model : BS1-IC Module
Code available: YES
Filename : RADMON12.BAS
URL : N/A

Description :

A Basic Stamp monitors the operation of an ion chamber radiation detector. The ion chamber and related circuitry produce a signal with a frequency proportional to the dose rate. The Stamp measures the frequency and calculates the dose rate and total integrated dose.

The results are displayed on a log scale panel meter and an LCD respectively. The dose rate is also transmitted over RS-232 to a remote PC.

A Front panel button allows the user to reset the total integrated dose. Another button allows the audio alarm to be muted at low dose rates.

==========
Title : Barn Monitor [# 023]
==========
Date : 960203
Author: Lynn A. Roth
E-mail: lynnr@hesston.edu

Stamp model : BS2-IC Module
Code available: YES
Filename : N/A
URL : E-mail author

Description :

The Barn Monitor checks the temperature in 5 rooms of a farrowing house. The temperatures are taken by DS1620 chips.

If the temperature goes outside the limit set by the farmer, the Stamp dials a pager using a 2400 baud MODEM. The same occurs if the power goes out.

==========
Title : Dallas one-wire interface [# 024]
==========
Date : 960212
Author: Daniel G. Clemmensen
E-mail: dgc@shirenet.com

Stamp model : BS2-IC Module
Code available: YES
Filename : N/A
URL : http://www.shirenet.com/~dgc

Description :

As part of a furnace controller project, I've interfaced A Stamp II to a string of Dallas 1820 digital thermometers. The interface consists of three cheap IC's and some subroutines. A design note and a demo program are available on the web. I have successfully tested the interface with a string of twelve 1820's.

I have not yet tested it with other one-wire devices, although I will update my web site when I do.

==========
Title : Sculpture control [# 025]
==========
Date : 960323
Author: Pierre Olivier
E-mail: olipie@aei.ca

Stamp model : BASIC Stamp Rev. D
Code available: N/A
Filename : N/A
URL : N/A

Description :

I have been working with sculptors for some time doing control circuits for their works using 555 (limited), industrial controllers (expensive and hell to program) and lately Basic Stamp.

Our latest piece deals with image deconstruction: it consists of 20 vertical cylinders on which an image is wrapped. Each has a photo detector to detect "position zero", and a custom basic stamp board with a MC3479 step motor driver that drives a step motor which turns one cylinder. Each cylinder can thus have its own routine which pos-

itions it precisely (400 steps/rev motors) where we want it for any amount of time, at any speed (very interesting sonically at sub-second stepping speeds!).

The stamp outputs direction, step and enable signals to the motor driver and a ready signal to a common line. It receives signals from the aforementionned ready line, and from the optical sensor.

It would have been quite a bit more complicated, bulkyer and expensive to implement this project without the stamp.

==========
Title : Commercial clothes dryer controler [# 026]
==========
Date : 960401
Author: J Amy
E-mail: Kuznjack@aol.com

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : N/A
URL : N/A

Description :

Detects drop of coin and increments time remaining register. Actuates main and heat relays. Checks temperature, and controles heat relay Periodically decriments time remaining register. Provides cool down cycle in last four minits.

Replaces original controler which costs several hundred dollars, and is not reliable.

==========

1.5 Credits and other things

Credits should go to all of you who makes this list possible I hope it suffices to say "Thank you to all who have contributed to L.O.S.A - we all appreciate it."

Special thanks to all of you at Parallax, Inc. who makes and support this great products !

If there is anything you think I've missed (or spelled wrong <g>) I would love to hear from you so we could make this list even better.

You could reach me at the following e-mail address: cj@hth.com

Stay tuned,

/Christer

Paulwho hates dumb hams@iterferion.com wrote: You are a Moron who does not
>> understand part 97.... we are a self policing radio service. Did you not
>> under go scrutiny for you alleged PhD? same diff babe

Paul, or whatever your real name is, why do you feel it is necessary to
personally attack this man for expressing a valid opinion. Doing so, and
in silly slang at that, speaks much of your own intellect.

While I have seen quite a bit of discussion on this group complaining of
the dumbing of Ham radio, I suggest such a retort indicates the larger
problem of the dumbing of society in general.

You bet you wouldn't say it on the air, or you would have an FCC citation in the mail next morning .... yes, even in your beloved "Land of the Free".

As someone has already pointed out, the US Constitution's First Amendment does not apply in the United Kingdom. As its principal use nowadays seems to be to justify antisocial behaviour (and just plain rudeness), I think we are fortunate in *not* having a First Amendment here!

Jim,

Great question. I posted that same question, (only not so eloquently).
I had a lot of people who said I was an idoit (only not so eloquently).
A few people, however, did try to respond with more than an insult.
A lot of people tried to rationalize it with reasons such as
"I want to use my new $2k rig as a signal generator so I can fix my
$25 handheld" when they could get a proper signal generator for about
$10 at a hamfest. Some wanted to use it for MARS, but I guess they
didn't know that they could call the manufacturer who would supply
that information for free. Some wanted to take the rig overseas where
the band allocations are different. This point was probably the only
valid reason that anyone pointed out. But I would suspect that even in
the case where the manufacturer made firmware allowance for this, that
most of those requesting the mods were after something else anyway.

A few wanted their rig to pull 'double duty' and use it in another service
as well as in the ham bands. I wonder if they ever checked into those
other services to find out if type acceptance was a requirement or not.

In short, almost every response was very lame, with the rare exception.

Maybe they think that it adds re-sale value. I don't know if that is
true or not, but in today's world, I don't know that I would really
want to buy a used rig if I had questions on the seller's integrity.

I think that most hams just think it is sexy to tell their friends
that their new rig is a 0-30Mhz general coverage transmitter. And they
are willing to make the occasional mistake at 3am when their eyes can't
focus, and transmit out of band, and maybe get an NAL.

I have a real problem with anyone who goes out and spends $2k on a rig and then immediately gets on Usenet asking for mods. I guess the best thing that happened as a result of my questioning this was that I got put into a lot of peoples 'kill' files. ;-)

Oh, the discussion did take a positive turn and people started asking if transmitting into a dummy load was really 'transmitting'. I don't recall that there was a defacto answer, but the discussion was good anyway.

On 12, 13 and 14 April a number of Groups are planning to activate some of the rarer EI counties. In addition, WAI squares (similar to WAB) will be activated.

The event, known as The Shannon River Run, will involve six Emerald Star Line cruisers, equipped and crewed by EI, GI and GW operators. There will also be a land based control and information station running full power into good antennae systems. Callsigns will be in the series EI2SRR to EI9SRR.

In addition to assisting operators working towards their WEIC (Worked EI Counties) and WAI (Worked All Ireland) awards, a Special Award Certificate will be issued to all stations making contact with five of the cruisers over the weekend. A similar certificate is available to Listeners.

Operation will be centred around the following frequencies:

CW: 3570, 7007, 14070
SSB: 3670, 7070, 14270
FM: S21 on 144 HHz

There may be additional bands activated if conditions are good.

dunaway@magicnet.net writes:

>I have worked the CQ WPX SSB contest and have a bunch of new calls,
>but NO QSL route information. Where does a person obtain this info.
>I have read that you do NOT ask for QSL info during contests and
>pile-ups so I didn't. Now what??

What I do is run all the foreign calls through an email server at qsl-info@aug3.augsburg.edu, one callsign per line. I also search the DX newsletters by automatic means for matches. Then I send everything I've got to the outgoing buro, whether I have a QSL route or not. My interest is more in the contesting than the QSL cards but I figure a fraction of the folks I contacted are seeking them, so I send to everybody, every time. As I get better at making contacts I find the desire for a printer for labels getting more and more attractive :-)

Yes, it is very awkward for a contester going at a high rate (or checking other bands and making contacts when you think he/she might be listening). If his rate is not high and he isn't doing two things at once behind the scenes then he'll probably give you QSL info cheerfully. If things are busy, noisy on his end, he's tired, or occasionally just a true jerk, then you'll most of the time be ignored, once in a great while get a rude remark. Key thing is to not let it bother you but try to tune into the situation. Over time you'll learn to sense what is appropriate (but will always be wrong a part of the time). Oh, and some contesters understand only enough English for the contest. The critical thing is to avoid snap judgements about your treatment in these situations. If you manage to get on the runner's side of a pileup you'll be amazed at how those snap judgements will revisit your thoughts :-)

During WAE last year I chased down some guys after regular contacts to give them "QTC" information, in some cases multiple batches. More than once they reciprocated with a quick "I'd be happy to send a QSL via the buro". In one case the guy gave me his full mailing address. I didn't really want this since I can't afford direct QSLs, but couldn't bring myself to dampen his enthusiasm.

And keep in mind that some contesters do not want to hear the words "QSL card". They make tens of thousands of contacts a year, year after year, and would be smothered if they got cards from everybody. So some cards will go to folks that are eager for them, some will go to the box for fireplace starters in the foreign country.

Regards,
Pete

Source record: 228065

Charles Copeland asked:

>New Zealand forcing CW to be dropped internationally?<

At the last ITU WRC meeting (1995) an initiative was opened by the NZ delegation to visit this issue. The agenda item was not pursued at that meeting, but will appear as part of a larger "look" at amateur radio at the the 1999 WRC.

Many national societies are now examining this issue, including ARRL, RSGB, RAC, IARU, etc. IARU and ARRL (and I'm sure others) have established working groups to prepare for WRC 99. You should contact your national society with your views and recommendations as early as possible.

Not every VE team will let you copy down an entire text's worth of dots and dashes. (I had a big fight with one particular member of the VE team with which I was affiliated, but then it turns out that my schedule won't let me VE anyway, so the point is moot. That particular VE team *won't* let you copy dots-and-dashes: see http://www.cc.columbia.edu/~alan/ham/exam-rules.html for details.)

>

Boy, a chill just went down my spine reading that one! Not only do we share the same first name, we both have been stuck in bad radio shacks!

I went through the same BS with the district manager griping because my numbers were poor. I was laid off after my 3rd christmas (the day after xmas) because of "poor performance", but then 4 months later, they closed the store because it was "underperforming"...

As I have said before, I don't mind working holidays, as a matter of fact, I have worked part time every christmas season since 1990...

I guess boycotting it the only was they'll get the message, through their wallets!

4942. Radio Shack HT 202

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-08 00:00:00 UTC
From: bbryant@gnn.com
Message-ID: <4kbsq3$dpl@news-e2b.gnn.com>

VE3JW Special Event Day
On April 14/96 there will be a special event station held at the Museum of Science and Technology to celebrate the 1st year opening of the amateur radio exhibit, VE3JW.
Frequencies will be 3860, 7260, 14260 (+/- QRM) and during the hours of 1400-2200 UTC.
To receive an certificate, send a 9*12 SASE (if letter size is received certificate will be folded!) to: VE3JW, Box 5530, Stn F, Ottawa, Ontario, K2C3M1.
Non-Canadian stations may send either a $1 money order or include a 'green stamp' ($1 bill) for postage along with the 9*12 envelope.

>The offsets are 600khz +- offsets, try checking that also...

>Brian ve4rbl
>==
The "offsets" that Brian referred to above relate to the difference
between the "input" and the "output" frequency, F. J.

Repeaters transmit on a different frequency than they receive on, so
if, for example, you hear a repeater's output on 146.73, it's input
will be on 146.13, or 600 KHz lower. Some of them operate 600 KHz
higher, so keep this in mind.

Your HT would already be set up to operate all standard offsets, as
well as "simplex" (TX and RX on same freq). these will probably be
signified as "+" and "-" (blank for simplex). When you find a
repeater's output, try both + and - (but don't TX out of band, of
course). One of them should get you into it.

Good luck

Not only that, his logic doesn't cut it. The regulations he would have us enforce specifically forbid VEs from asking any questions about the validity of a legitimate form signed by a practicing physician. Neither are VEs allowed to tell anyone that someone got their upgrade via a handicap exclusion. Doing so, in addition to being unethical because it's no one else's business, is a good way to no longer become a VE.

Press Release
For Immediate Dissemination

From: James Altman, N4UCK

Re: Special Commemorative Olympic Callsigns

Date: April 8, 1996

The FCC approved, today, special commemorative Olympic Callsigns for Amateur Radio operators operating within the State of Georgia during the period April 15, 1996 to August 31, 1996.

The STA provides: Any ham operating within the State of Georgia with a ï¿½4ï¿½ in his/her call sign may replace it with a ï¿½96ï¿½ or a ï¿½26ï¿½. Amateurs with any number may add "00" to the existing number. Foreign stations operating under a reciprocal permit operating within the State of Georgia may sign in the usual format but with a /W96 or /W26 or /W400.

Copies of the STA may be viewed from my ham radio page which is a subpage of http://www.altlaw.com/metro/jaltman.html

102670.1206@CompuServe.COM (Brian Webb) writes:
: Yesterday (Saturday 07 APR) I tried to receive the AO-27 downlink
: on 436.800 MHz, but didn't hear anything. I listened from 0900
: local time to 1800 using a Radio Shack PRO-2006 scanner in FM
: narrow mode. The receiver was programmed to search from
: 436.750-436.850 MHz in 5 KHz increments. The antenna was an
: outdoor sloping dipole for 35 MHz (it works from 30-950 MHz).
: Also, my squelch was set very low so a weak signal would break
: squelch.
:
: Any idea what the problem is?
:
: Brian Webb, KD6NRP

Actually AO-27 was working quite well on Saturday April 7. I was able to make
contact with G6HRH from New England.

What I had different was a better receive system using an 11 element yaga
tracking by hand with an 18db preamp. It does not put out a strong signal
you really need to get as much gain as possible to hear it. If i'm 30 degrees
off with the beam I don't hear it.

Get a good antenna system and some tracking software and give it another try
its lots of fun

Bill

Aloha to All,

Agenda item "2.2 Condiseration of Article S25 concerning the
amateur and amateur satellite services" for WRC-99.(Art. S25
renumbers privious Art. S32 which contained Radio Reg. 2375,
amateur Morse tests for HF priveleges internationaly.)
As result, the IARU has established a committee called
The Future of the Amateur Service Committee(FASC) to assist/
advise the IARU in formulating policy/positions on the above
WRC-99 agenda item. The members are:

Chairman: Michael Owen, VK3KI

Larry Price, W4RA, POB 2067, Statesboro, GA 30459-2067

David Sumner, K1ZZ, dsumner@arrl.org

John Bazley, G3HCT

Tom Atkins, VE3CDM

Terry Carrell, ZL3QL

Dick Baldwin, W1RU, ex-officio, Hc Box 60, Waldoboro, ME 04572-9026

A long list of items is assigned to the committee to be considered. One, at least, is of particular interest specifically to you:

"...having regard to: ..the technical and operational qualifications for licensees in the amateur services, " .

The committee is to encourage full discussion of these matters, invite comments from individuals, groups, member-societies, and regional organizations, participate in meetings and take into account comments it receives, prepare reports, recommendations, and proposals by the Administrative Council, member societies and others. As a first step, all IARU member societies have been invited to send opinions to the chairman of the FASC(VK3KI) as "to how the Radio Regulations might be modified or improved to meet the challenges of the 21st century."

The first regional conference to consider recommendations from the committee will be the Region 1 Conference to be held in Israil, September 1996. Others will be held over the following two years leading to WRC-99.

In the UK, the Radiocommunications Agency has asked the Radio Society of Great Britain to consider formally the proposal to delete Morse testing as a req for HF privelege. "whether the Morse test is a relevant means of differentiation (between classes of license)....It is clear that this is an issue on which there are differing and strogly held opinions. It is now timely to reconsider this issue and to decide whether the Morse requirement is one in which radio amateurs see relevance to the next millenium."

In France, F6IIE, vice-president of UFT(Union Francaise des Telegraphiste) has written, "Let those who are against the CW exam not delude themselves, they risk having something other than CW to learn. Those who are in trusteeship will not do away with (overnight) a "filter" so efficient for controlling access to the HF bands.....the CW examination is not really so difficult...it opens up horizons certainly more interesting than all the data-processing systems (which are) useful indeed, but of which one tires so quickly, and which render communications more and more impersonal." Translated from La Pioche, journal of UTF, by Ken Quigg, GI4CRQ, and printed in Morsum Magnificat, Feb. 96.

This will be a hot topic in the two and a half years before WRC-99. Be prepared to respond to surveys/poles by ARRL and probably others, and to clearly express your reasons for retaining or dropping Morse as a req for HF operating privileges.

Obviosuly the English and French are moving out smartly to face the issue, and do have opinions already in mind!

As the first Region meeting is only a few months away at which the issue will for the first time be formally discussed in light of the WRC-99 agenda, you might want already to

organize some thoughts carefully on the issue and maybe
e-mail or post to the FASC committee member of your country,
or nearest you. I hve included K1ZZ's e-mail address above,
though not at all sure he is ready to receive input on the
topic just yet, but who knows?

4952. Which PREFIX to put before a RECIPROCAL Permit ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-08 00:00:00 UTC
From: pa3btl@aol.com
Message-ID: <4kc8qv$89g@newsbf02.news.aol.com>
Source record: 228086

Today I received from the FCC a reciprocal permit, so I can operate in the USA.
Unfortunately, the FCC did not state on the permit what the prefix should be.
I think it will be W4/PA3BTL, but I'm not sure. (PA3 prefix means full license).

Reactions will be appreciated, so I can follow the correct rule.

Regards,

PA3BTL, Henk van Asselt

: Ken WA9WCP

Hi Ken!

It seems to vary quite a bit based on who the local Red Cross disaster services director is. We've had a very good relationship with several of the local chapters here in the south end of the SF Bay Area. The Santa Clara County, Palo Alto, Santa Cruz and Monterey chapters come to mind and I'm sure that there are others that I was not as close to as I might've been.

I was ARRL Section Manager here at the time of the 1989 Loma Prient earthquake (magnitude 7.1, 100+ fatalities, major delay of World Series...) While it is true that ARC has it's own radios and cell phones, they were severly overloaded for several weeks in '89 and folks who are not used to using an HT-like device (like a cell phone) discovered too late why multiple backup batteries are a good idea in the field. They also discovered why it's better to have people available who are interested and knowledgable in how to do radio *COMMUNICATIONS* than to have volunteers who simply know how to talk on the phone.

I know of a couple of good ARC folks who are well acquainted with Amateur Radio and may be able to give you contacts inside ARC. Mike Riley worked at Red Cross national in Washington DC last I heard. Before working at ARC, he was a staffer at ARRL in Newington and so knows both organizations quite well. I'm not sure, but I think his call is K1XB. Another ARC person who has done a lot of work to integrate amateur radio and ARC is Ted Harris N6IIU. I'm not sure what his current ARC affiliation is, but he has been an ARC official at the local and regional levels for many years.

1996 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 4 until 2000Z May 5, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single Multi-multi classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange report and state/province/DXCC country.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low end; Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150, 144.200, 146.580. RTTY - Normal RTTY Bands (No WARC Bands)

Score one point per phone, RTTY QSO and two points per CW QSO. QSOs with club station W1QI and ARRL HQ station W1AW count 5 points. CARA will be operating W1AW on Sunday, May 5 from 1400z to 2000z, on or near the above-mentioned frequencies.

Connecticut stations multiply QSO points by states/ provinces/Connecticut counties worked (DX only one multiplier); others multiply by Connecticut counties worked.

Plaques and certificates (100 point minimum). Special certificate for working all 8 Connecticut counties.

Send entry and SASE for results by June 5 to CARA, P.O. Box 3441, Danbury CT 06813-3441.

Good luck and 73 de Jim, KD1YV

4960. Re: Vanity Calls -- What gate???

> Doug K4JGWActually, don't look for any gates to be opened this year. What happened
was what one can expect in this age.
It seems that the FCC was hit with several petititons challenging parts
of the vanity call sign program. Remember that one of the first gates to
open gives a family member the opportunity to get the call sign of a
decesaed family member if the individual making the request holds a
license equal to or higher than the grade of the deceased. That was a
point of several petitions -- if Dad was an Extra and I am a Novice, I
should still be able to get his call.
So, we all sit around and wait on a few crybabies. Oh, excuse me. I
forgot this is the land of the free and the home of the brave and all
opinions are equally valuable.
No gates open now and none likely to open until the end of the year.

Vince ol' Buddy,

I notice you now post from Compuserve this peaks my interest. Did the IEEE toss you for excessive nitwitery? Just curious. By the way I did pass the code, biggest waste of time in my life. It sickens me to think of all the technical stuff I could have been doing in that wasted time. Now I think I will waste some time working to get the band plans changed. CW has far more bandwidth than it deserves. Based bandwidth required and number of actual users I think a 20% CW/ 80% other modes is more equitable. This seems like a good place for me to expend some of my excessive political energy.

:::::::::::::: DRAKE C-LINE STATION ::::::::::::::::

BASIC PACKAGE:

* R-4C Receiver (serial # 16320)
* T-4XC Transmitter (serial # 20489)
* MS-4 Speaker
* AC-4 Power Supply

INCLUDED EQUIPMENT & ACCESSORIES:

* Crystals for WARC, WWV, etc.

* CW filters -- 250 Hz + 500 Hz

* Owner's manuals --
Excellent condition, no underlining, no torn
pages, and no coffee stains.

* Original connecting cables in mint condition.

DETAILS:

* All units are in excellent, near-mint condition.

* R-4C recently aligned by Drake at their
Franklin, Ohio facility.

* NO dents!

* NO stains!

* Absolutely original condition. NO mods!

* Know defects:

o Missing cover for the accessory crystal sockets at
the rear of the R-4C.

o Finals a bit weak on the upper freqs.

::

Asking $575 + shipping.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 APRIL AND FORECAST FOR 09 APRIL - 11 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 07 Apr
Daily Proton Fluence >1 MeV: 3.7E+05
Daily Proton Fluence >10 MeV: 2.0E+04
Daily Electron Fluence >2 MeV: 3.6E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Apr 10 Apr 11 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Apr: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 07 Apr
Learmonth 6 2221 2212
Fredericksburg 5 2
Planetary 5 3

Observed Kp for 07 Apr: 0011 2111

2B. MAGNETIC FORECAST
Date Ap Conditions
09 Apr 13 Unsettled
10 Apr 8 Quiet to unsettled
11 Apr 8 Quiet to unsettled
COMMENT: Chance for mild activity on 9 April.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
08 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
09 Apr Normal Normal Fair
10 Apr Normal Normal Fair
11 Apr Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
08 Apr 7

Observed Australian Regional MUFs:
Darwin: Not available.
Townsville: 15-30% depressed 00-04UT. Blanketing sporadic E
observed 04-12UT. Near predicted monthly values at other
times.
Hobart,Sydney: Near predicted monthly values.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
09 Apr 5 near predicted monthly values
10 Apr 5 near predicted monthly values
11 Apr 5 near predicted monthly values

Message-ID: <4k9muc$nkl@news.asu.edu>
Source record: 228192

I've tormented about drilling holes in a new car for years ---
but do it. It's only a 1/2 inch hole you have to drill so you
can install a proper antenna. EVERYONE has an antenna nowadays.
Besides, when you re-sell the vehicle, you can always advertise
that it is already setup for a cellular system. (Uses same hole).

See there --- your used car will be worth more (not less) when
you re-sell it.

[31st March? Well, that's what it said...]

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 902 31ST MARCH 1996

Morse dashed by Lt. Aaron Matzkows

(extract from Navy News, v.39, no. 5 March 25 1996)

Cw Morse has retired from the Navy.

Morse joined the RAN on July 10 1911, the date of the Navy's foundation and served conscientiously for 85 years, through both world wars, Korea, the Malayan confrontation and Vietnam - and everywhere the Navy has been.

A signal has recognised that the use of Morse Cde formally ceased in the RAN on January 31, but stated -- that residual Morse skills will remain in the RO (radio operator) category fo many years.

The signal continued -- The requirement for visual morse (flashing light) remains and will continue to be taught on the small ships RO course.

Cw Morse has had a long career in the RAN.

Its cessation is a recognition that Morse can no longer provide the data rates required by modern communication systems and that it is a labour and training intensive skill.

Nevertheless Morse techniques have served the RAN with distinction through two world wars and served regional conflicts.

provided by Bill VK2EG

international Marconi Day station

The special event station IY0TCI will participate in the 9th ***INTERNATIONAL MARCONI DAY***, APRIL 20 1996, at Civitavecchia (Rome).

The local A.R.I. team will operate all band, all mode, to celebrate Guglielmo Marconi's birth date. (Bologna, Apr 15

1874).

The official I.M.D. list counts about 50 special stations from Marconi sites around the world: EU, AF, NA, SA, OC.

There is also a relative IMD award with more categories, by the C.R.A.C.; award manager is G0PGX. The classes and the requested contacts with the different IMD groups:

MIXED: 15 QSOs, MIX MOBILE: 12; CW ONLY: 15; DIGITAL ONLY: 15 MIX MULTIOP: 20 MIX SWL: 15 CW SWL: 10; MIX SWL HRD/WKD: 15.

Award cost: 10 U.S. dollars, 4 U.K. pounds or 12 I.R.C's.

The required number of contacts must be worked in the same 24 hours period.

We hope to receive many messages by packet too, during IMD celebretion among the students and teachers of the technical high school "Guglielmo Marconi" in Civitavecchia, saturday in the morning.

Packet address: IY0TCI@IK0EIA-8.ILAZ.ITA.EU

QSL MANAGER: I0KHP, Pat, with our special card: *** Marconi's photo ***

That the father of radio dedicated to the radio club of Civitavecchia, 1927 where he carried out his first UHF experiments, at TORRE CHIARUCCIA, till 1937.

Qsl via direct or bureau.

Best 73 and see you in I.M.D.

I0KHP coordinator,IK0L

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(29 MARCH - 04 APRIL)

DATED 5TH APRIL 1996

SUMMARY

Date 29 30 31 01 02 03 04
10cm 71 70 70 68 71 71 70
A 8 6 6 10 4 7 (10 ESTIMATED)
T -10 -5 2 2 -1 8 18

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 31ST, 2ND AND 3RD APRIL, QUIET WITH AN ACTIVE PERIOD FROM 1300 TO 1700UT, AND QUIET TO UNSETTLED ON 29TH TO 30TH MARCH, AND 1ST APRIL.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE DEPRESSED TO 30 PER CENT TO 1100 UT ON 29TH MARCH AND AGAIN ON 30TH MARCH, THEN BECOMING ENHANCED TO 15 PER CENT LATER IN THAT DAY. THIS PATTERN WAS AGAIN FOLLOWED FOR 31ST AND 1ST APRIL, WUTH FREQUENCIES DEPRESSED TO 15 PER CENT EARLY IN THE UT DAY, AND ENHANCED TO 30 PER CENT LATER IN THE DAY. FREQUENCIES WERE NEAR PREDICTED MONTHLY VALUES 2ND TO 4TH APRIL.

FORECAST (05 APRIL - 11 APRIL)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE

FREQUENCIES: 5-20 PER CENT BELOW PREDICTED MONTHLY VALUES

Notes of Interest:

ROTUMA, 3D2. Maurice I4MKN report that received qsl card from 3D2AA after he qsoed with him and on the qsl there the confirmation that the location is Lautoka Fiji (OC-016). On the card there is well specified that he is the 1st native license on Rotuma.

Peacefull and Happy Easter holidays to all readers.. keep listening and wish to find a new on the Easter egg.

The VK2SG RTTY DXNOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org, an digital-dx@st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/tilde)~jukka/webcluster.html

For next week's bulletin send your bandpass to Bob, W2JGR at @ W5KSI.#NOLA.LA.USA.NA.

Gl de (DX2) Luciano, I5FLN AT ZS5S.ZAF.AF

ARLD017 DX news

This week's bulletin was made possible with info provided by Trey, WN4KKN, Scott, AA8SM, Cecil, NW8F, Richard, G0JFX/F5VCO, Jean Michel, F6AJA, Dick, K2UFT, Kiyoshi, AE4EZ, Tedd, KB8NW, Wayne, N7NG, the OPDX Bulletin, Chod, VP2ML, The DX Bulletin and Contest Corral from QST. Thanks to all.

CHRISTMAS ISLAND, VK9X. Martti, OH2BH, Leena, OH2BE, and Petri, OH2KNB, will sign VK9XM for five days starting April 6. QSL

via JA1BK. The VK9XH Christmas Island and VK9CA Cocos Keeling DXpedition by Ken, AD4WF, has been cancelled.

MAURITANIA, 5T. Bernd, DK3LQ, hopes to be signing 5T5MB sometime in late March or early April.

CYPRUS, 5B. Work Frank, 5B4/DL8KWS, through April 10.

MADAGASCAR, 5R. Gerard, 5R8EN, is frequently on 7057 kHz, listening on 7240, around 1415z. He will work CW on request. He has also been spotted on 7006 kHz at 0345z. QSL via F6ARA.

SIERRA LEONE, 9L. Paul, 9L1PG, and Millie, 9L1MG, will be leaving 9L in mid-June. Paul will be spending time on 80 meter CW for those still needing Sierra Leone on that band. Millie frequently checks the 14226.5 net. QSL via NW8F.

MIDWAY ISLAND, KH4. NH6D/KH4 will be QRV for two weeks in April. This island will be abandoned by the military in 1997.

GRENADA, J3. Joe, WB8GEX will be on the air as J3K April 5 to 12 on 160 through 10 meters.

PIRATES COVE. Current operations of KG4AA and KG are apparently pirates.

COMING EVENTS

APRIL 6TH-7TH EA WW RTTY CONTEST
27TH-28TH SP DX RTTY

MAY 11TH-12TH VOLTA RTTY DX

JUNE 8TH-9TH ANARTS WW DIGITAL CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President(Col) VK2CTD at VK2DAA, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2WI. Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or
patl(at)extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

Federal news

WIA Submission ON INTERNET

EXPOSURE DRAFT

WIA Submission to the 38th Parliament on Amateur Radio Licensing

The WIA Submission is now available on Internet for download via the World Wide Web. This has been done to further improve the distribution of the document to Interested amateur radio operators. Members of the WIA will have received a copy as a supplement to AR magazine in the April edition.

To access the submission, access URL:

http://www.vk5wia.ampr.org/federal/subintro.htm

It is also accessible from the WIA (SA Division) Web Home Page at

http://www.vk5wia.ampr.org/. Other Amateur related Web Sites are welcome to point links to the site if they wish.

For further information, please contact me on packet or E-Mail on the addresses below.

Cheers de Grant VK5ZWI
WIA SA Division Federal Councillor

VK2 WICEN news

WICEN News

Last weekend WICEN (NSW) was privileged to receive a visit from the Federal Co-ordinator, Leigh Baker VK3TP. The discussions over dinner were quite fruitful, especially the insights into WICEN's relations with the various authorities. Thank you Leigh for taking this time out of your busy schedule.

All WICEN members are reminded that subscriptions are now due; a mere $10 sent to the Treasurer will make him very happy, and will also ensue your membership within the only amateur radio organisation accredited by the State government to take part in a disaster situation.

Are you wondering how you are going to pay for your "Green Slip" this year? If so, perhaps WICEN has the answer: a "Green Slip", donated by the NRMA, is First Prize in the WICEN raffle. Second and third prizes are generous orders upon a leading electronics retail firm. This raffle is open to everyone, not just WICEN or WIA members; for further details please contact your local harried WICEN official.

Events this month include the monthly Management Committee meeting next Saturday; the Divisional AGM on the 20th April, and the RTA Big Bike Ride, from Albury to Bathurst, over the 20-28th April.

Looking ahead to May, there is the Dobie Camping Area exercise, organised by Frank VK2XVJ, over the 3rd-5th May; over the same period is the Senior Rescue Instructors' conference (to which WICEN was invited), on the 4th-5th May; and the closing date for the WICEN "Green Slip" raffle is the 11th May.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/".

News briefs
NEWS BRIEFS

The Best New Hardware Award at the recent PC 96 Show in Sydney was won by Victorian company, Rosetta Laboratories, for its WiNRADiO product. WiNRADiO is a plug-in PC card that contains a triple-conversion synthesised receiver, with a tuning range of 500 kHz to 1.3 GHz. The receiver supports AM, narrow- and wide-band FM, and single sideband through an onboard beat frequency oscillator (BFO). The accompanying software, which runs under Windows, appears to have all the functionality of an expensive comunications receiver.

As if people weren't paranoid enough about things falling out of the sky already... the Council of Europe has decided it wants a census of all things in the heavens likely to collide with the Earth, namely several thousand asteroids whose orbits are close enough to make such a collision possible.

A recent report to the Council detailed the damage likely to be caused by an asteroid impact, including continent-wide firestorms, followed by

massive dust clouds enshrouding the earth (causing a global temperature drop). Nitric acid would be released by nitrogen burning with acified water and soil.

Fortunately, collisions with asteroids big enough to cause such damage occur only once every 10 to 30 million years. Neverthless, the Council has sought the aid of the United States and Japan to develop the means of diverting any asteroids that might be on a collision course.

In the United States, it's been revealed that the American photocopier company Xerox, was engaged in espionage work for the US government, during the 1960's.

Up until 1963, Russian embassy officials in Washington used to copy documents by hand, until they decided to rent a photocopier. Xerox engineer Ray Zoppoth hit on the idea of mounting a camera in the copier, which was activated every time a copy was made. For reasons unknown to the Russians, the machine was not quite as reliable as might otherwise have been expected, and the friendly Xerox maintenance man made sure to collect the camera's film cannisters on each visit.

The camera was in use at the Russian embassy from 1963 until 1969. It proved most informative especially during the Cuban missile crisis in the early 60's. It was so useful that similar photocopiers were installed at other embassies in the USA.

IPS Report
WEEKLY SOLAR AND GEOPHYSICAL REPORT

(29 MARCH - 04 APRIL)

DATED 5TH APRIL 1996

SUMMARY

Date 29 30 31 01 02 03 04
10cm 71 70 70 68 71 71 70
A 8 6 6 10 4 7 (10 ESTIMATED)
T -10 -5 2 2 -1 8 18

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 31ST, 2ND AND 3RD APRIL, QUIET WITH AN ACTIVE PERIOD FROM 1300 TO 1700UT, AND QUIET TO UNSETTLED ON 29TH TO 30TH MARCH, AND 1ST APRIL.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE DEPRESSED TO 30 PER CENT TO 1100 UT ON 29TH MARCH AND AGAIN ON 30TH MARCH, THEN BECOMING ENHANCED TO 15 PER CENT LATER IN THAT DAY. THIS PATTERN WAS AGAIN FOLLOWED FOR 31ST AND 1ST APRIL, WUTH FREQUENCIES DEPRESSED TO 15 PER CENT EARLY IN THE UT DAY, AND ENHANCED TO 30 PER CENT LATER IN THE DAY. FREQUENCIES

WERE NEAR PREDICTED MONTHLY VALUES 2ND TO 4TH APRIL.

FORECAST (05 APRIL - 11 APRIL)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE

FREQUENCIES: 5-20 PER CENT BELOW PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: ANARTS rptr back

ANARTS repeater back on site

The Australian National Amateur Radio Teleprinter Society (ANARTS) has returned the Sydney RTTY repeater to its normal site at Blacktown after extensive testing in the Engadine area. The repeater's output frequency is on 146.675 MHz, offset down.

ANARTS' broadcast can be heard from the repeater on Sundays at 0030 UT and 0930 UT. The baud rate is 45 baud. Portions of the broadcast are also stored on the BBS attached to the repeater, and may be accessed under subject. Commands are prefixed by a fullstop followd by the command. For example, ".help" will give a full list of commands. Do not send inverted tones as the repeater will not respond to these.

Messages for friends, or information for all as in packet BBS's, may be placed on the BBS and will be held for 30 days. The BBS can be set to send RTTY at faster speeds if required -- see the help file.

Why not have a QSO with friends on the repeater? It's a friendly mode and gaining in popularity all over the world, in various contests, and QSOing with friends overseas. Get your typing up to speed on the RTTY repeater before going on HF.

The frequency in Sydney again is 146.675 MHz, offset down.

For further information write to ANARTS, P.O. Box 860 Crows Nest 2065, or packet to VK2JPA@VK2WI, or fax to (02) 672-3392.

From Pat VK2JPA
Secretary, ANARTS

>and gnashing of teeth among some of the more control freak news
>administrators, and Brian has been suitably chastised.

Essentially correct.

Although 'suitably chastised' is open to debate; there are unbalanced
individuals who went so far as to offer lawsuits and thinly-disguised
threats of violence. I've been rather subdued since. USENET has
certainly changed from its early days. And, I'm not sure, for the
better. Ah well, we live and learn.

The groups do still exist here, and are mated with the mailing lists
that were their inspiration. Not much traffic in either, though.

I'm not exactly sure how one line per group in an active file constitutes
a 'sad waste of resources', but that's a debate for another forum.

What surprises me is that this discussion is taking place NOW, well over
three months since I last sent out the newgroup messages (and about a
year after the first time). Is propagation that slow or is Rip Van
Winkle among us again?

CH>New Zealand forcing CW to be dropped internationally?
CH>I heard something to this effect on 2m. Any comments?

CW was "state of the art" many years ago. It isn't anymore. Although
it's a skill
I personally enjoy, I find the idea of forcing someone else to learn
something that's
so utterly irrelevant to today's screamingly-advanced
communications-modes quite
repulsive. Perhaps the CW-religionists ought to work on broadening
their bandwidth,
both technically and socially....

Actually, you can write down anything you want. BUT, the VE team
does not have to accept dots and dashes as letters. It is up to
the VE team as to whether or not to allow ANY dot and dash
combination to count. However, after saying that, I do know that
if you translate them, you had better be sure it is ok, cause any
mark on a piece of paper can be counted as a mistake. So be sure
to ask what they do at any particular session.

From: darryl.linkow@grinder.com
Message-ID: <8BE5583.016B00532E.uuout@grinder.com>
Source record: 227957

Hello all and thanks for reading this. I am looking for QSL cards from N7ANL, Richard Glaese in Kootenai, ID. I have sent him 2 SASE's along with some other written requests, and no answer back. If anyone QSO's with him on a regular basis, please ask him what he did with the SASE's?? I guess maybe he needed the stamps and envelopes to mail out his bills or something, because he sure never QSL'd me back with either one of them!

Also, if you know N6OBP, Joe Robinson, in Suisun, CA ask him what he did with my SASE, also, because he didn't use it to return a QSL. I even called on landline and left him a message on his answering machine, but didn't get a return call or anything back in the mail from him either.

What's with these people anyhow?? They promise to QSL. The QSO's are 5x9 both ways, and no return QSL, even when I send SASE's!!

Any and all help in getting in contact with the above operators would be appreciated. 73, Darryl KE6IHA

: Why not consider 220, or rather 222-225Mhz? This band is still vastly
: underused in most areas although it has better propagation than 440
: (in my opinion but I live in a hilly area).
: The hams have just not got the message yet even though we lost a couple
: of Mhz off this band a few years ago. And equipment for 220 is getting
: more scarce. The people at HRO are downright rude when I ask about
: 220 gear!

How popular is 220 in your area? Down here, it is pretty hot. We have The Condor Connection, a set of linked 220 repeaters much of the length of the state.

Not sure about the cause and effect on this. True, there is not a lot of 220 gear available. I liked the Icom 2m/220 FM rig, but it has been discontinued. This would have been a nice mobile rig, as our club has both 2m/220 repeaters in operation. I will probably go with the Yaesu FT-736R, with an added 220 module, but that is an expensive way to go.

Then again, I believe that 220 operation is authorized in only one or two other countries than the US, and it seems like Japan is not one of them. We are seeing more HF rigs with 6m added, due to the popularity of that band in Japan.

I will be in Portland in a couple of weeks, and HRO was one of my planned stops. All the sales force at the Anaheim store here are always pleasant. Their manager even pays for advertising in our club newsletter. Perhaps this was an isolated event? I will be sure not to bring up 220 when I go there. :-)

4993. Re: Which PREFIX to put before a RECIPROCAL Permit ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-09 00:00:00 UTC
From: Hans K0HB <71111.260@CompuServe.COM>
Message-ID: <4kchvq$4cp$1@mhafc.production.compuserve.com>
Source record: 228004

PA3BTL asked:

>Unfortunately, the FCC did not state on the permit what
>the prefix should be.

The prefix will be the letter "W", "K", or "N" (your choice,
but "W" in normally used) followed by a numeral
indicating the US call area in which you are operating.
Examples:

If you are in New York (area "2") you would sign
"W2/PA3BTL".

>Rob Bailey, WM8S (wm8s@citynet.net) Kanawha / Charleston
>Bailey Computer Systems Radio Amateur Civil Emergency Service

Rob,
I used to be involved with a search and rescue organization in Eastern WA. They incorporated as Kittitas County Search and Rescue Council, Inc, and established 501(c)(3) requirements with the assistance of the County's attorney. This unit serves at the direction of the KC Sheriff's Office and is a quasi-government agency in the sense that RACES is quasi-government. But I don't think that really matters. I think that KCS&RC established itself as a non-profit humantarian aid group. They are funded entirely by donations.

Kim, my wife, filed the 501(c)(3) paperwork for a non-profit pre-school group once. She did all the paper work herself. The IRS sent it back the first time, I think, with some add'l information required. She fixed it and returned back to the IRS and they eventually received their non-profit status.

Good luck,
Ed, KF7VY

4998. Phone Patch vs GTE

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-09 00:00:00 UTC
From: Davew@cris.com
Message-ID: <4kcoqj$15@tribune.concentric.net>
Source record: 228009

A friend of mine maintains a repeater/phone patch, using space on the roof of our commercial building. Pacific Bell honored the FCC ruling that amateur phone patches qualify for residential (verses measured business) service.

He'll be installing another one in an area served by GTE California and they can't find any ruling dealing with phone patches, and will not allow residential lines at the commercial location.

Can anyone let me know the FCC ruling/number that GTE can reference?

Thanks in advance!
Dave

4999. Computers in Packet radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-09 00:00:00 UTC
From: ap0001@pacificnet.net
Message-ID: <4kcs28$rjt@news2.cais.com>
Source record: 228010

hi...

this may be the wrong place to post but here goes..

I'm not really into amateur radio but i am into computers, in fact I am involved with a project to bring a new non html based Internet browser to market.

My question here is about packet radio, I have a friend who is involved involved a little in amateur radio and he has asked me about "packet radio" computers..

In my business I tend to encounter (now) inexpensive 286 and 386 class computers and parts (some with network adapters), which are not really suitable for operating in a Windows environment, but run DOS software well..

Are these suitable for packet radio systems ?? If so and if anyone is in need of such machines, let me know..

I would also be interested in information as to what sort of peripheral hardware is required?

As I mentioned, my forte is primarily computers (I have a basic understanding of analog electronics) so I could probably assist in setting up systems..

Thanks..

Ed Manges

5000. Re: HAM RADIO IS A CALLING

Newsgroup: rec.radio.amateur.misc

I have NO technical ability and don't care to get any. I have a general
license and can receive CW about 25 WPM. When my radio doesn't
work I look to see if it's plugged in and if it isn't, I carry it to the
radio store.
However, I love the hobby and think it has a lot of things for
a lot of people. I think we forget it is a hobby and is supposed to be
fun. If we have to drop CW to get more people interested in the hobby,
lets
do it. What is the average age of a ham? Last time I heard it was
something
like 58. Now that should tell you we have to do something!!

>Bruce Bryant, KC8BWL

Hi Bruce,
I will say in my opinion, that the HTX-202 is the best HT on the market for 2 meters. But you must understand there is no mods for this rig. Also it doesn't receive out of the band. But if your looking for a 2 meter only HT, then you can't beat a HTX-202. I owned one for a long time before selling for something that would receive out of band. I like to listen into local police and weather. Great HT and great price.

5002. QST Content

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-09 00:00:00 UTC
From: Dave Heil <k8mn@clinet.fi>
Message-ID: <3169EFF1.49E6@clinet.fi>
Source record: 228013

Have any of you noticed the gradual movement of articles which would have been in QST to the League's specialty magazines? Formerly, such articles would have appeared in the magazine but most with any meat have been shifted to QEX, the NCJ or have been included in the DXCC Yearbook. The first two of those requires an additional expense for subscription. The third is free IF YOU'VE MADE A DXCC SUBMISSION during the year. If not, you must cough up five dollars.

In QST, we're now treated the likes of "New Ham Companion", blatant "ads" in the form of articles (on using the ARRL RF Design software which costs $150) and items such as the recent "technical article" describing how to buy two standoff brackets and a length of steel mast to mount a small yagi on the end of a house. Articles on the Internet bother me only because I'd normally subscribe to a computer magazine if I want them. The front cover of QST does, after all, still read "devoted entirely to amateur radio".

I guess I'm really asking if the ARRL still exists to serve its membership or whether those in power see the membership as a tool for building a publishing house.

If you have become an ARRL member, does that entitle you to expect the best in amateur radio reporting, DXCC information, technical articles and the like without paying additional fees?

73,

Dave Heil OH2/K8MN
k8mn@clinet.fi

5003. Mail Mangled QST

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-09 00:00:00 UTC
From: Dave Heil <k8mn@clinet.fi>
Message-ID: <3169ED0E.4E4D@clinet.fi>
Source record: 228014

We have three ARRL members receiving QST via the APO mail. Each month our magazines arrive late and in poor condition. Spines are broken, pages are ripped and bent. I have been corresponding with the League and have been assured that there are very few who receive the magazine in tatters. I wonder if any of you have been having the same problem.

I maintain that most folks save their copies and that the protective plastic bag was something I've already paid for. I've pointed out that QST always had such protection (in the old days, QST was mailed in a brown paper wrapper). Is the League in such sad financial state that it is forced to cut pennies?

5008. Digest of Articles - QST Mar 96 (Long - 37k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-09 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <4kdjru$4o0@news1.infinet.com>
Source record: 228019
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the March, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub3/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
SEND INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Weekend DigiBrain
Author>Craswell, James "Jay" - WB0VNE
Source>QST Mar 96, pp. 32-34
Abstract>The "Weekend DigiVFO", described in QST May 95, is a direct digital synthesized VFO that uses a computer to control it. Now, the author has added a special-purpose computer controller to the package.

Digest>In QST May 95, WB0VNE's article: "Weekend DigiVFO" described his direct digital synthesis-based (DDS) VFO. It uses a very-large-scale integrated (VLSI) circuit chip containing 32,000 transistors and is

controlled by a personal computer.

In the few months since that article appeared, many people have built the unit. It is being used as the frequency-determining element in transceivers, function generators, and other kinds of equipment in both amateur and non-amateur applications. In response to many requests, he has now expanded the unit to contain its own computer controller so as to become a free-standing digital VFO with its own LCD frequency display.

The original digiVFO circuit is incorporated in the expanded version, without modification. The added computer controller uses a Motorola programmable microprocessor Model 68HC705J1A, two octal D flip-flop chips, and a rotary encoder which allows the operator to set the frequency by turning a knob, exactly as if it were an analog system.

The circuit output is a synthesized sine wave, the amplitude of which can be adjusted up to about 2.5-volts peak-to-peak. It also contains a large number of spurious signals at a wide range of frequencies. Even though they are more than 60-dB. below the fundamental, most usages will require some amount of bandpass filtering to eliminate them.

The standard digi-Brain kit produces output from 5.05- to 6.05-MHz. On request, the author will provide either a 0.5-MHz. or 1.0-MHz. full-scale span at other frequencies, and will even supply a reverse-tuning VFO, i.e. one that moves lower in frequency as the dial reads higher.

Operating software is preprogrammed into the memory of the CPU chip. Those who want to write their own control program and load it into the chip can do so by using a 68HC705J1A Designer's Kit, obtainable from Motorola at a cost of less than $100. Alternatively, the author offers preprogrammed chips as well as complete parts kits, including etched and drilled PC-boards and all parts, less power supply and enclosure. Software is available for downloading from the ARRL Hiram BBS and by ftp from the oak.oakland.edu/pub/hamradio/arrl/qst-binaries in the file: DBRAIN.zip. The preprogrammed microprocessor is $10. The complete kit of parts, including the preprogrammed chip costs $89.95, not including shipping.

Title>TA2:The JVFAX APT Adapter
Author>Zehr, Grant - AA9LC
Source>QST Mar96, pp. 35-40
Abstract>This adapter, a VHF receiver and a computer, plus readily-available software, are all that is needed to receive and display satellite weather pictures. Full construction information is included.

Digest>JVFAX is a software program that causes an automatic picture transmission (APT) from a weather satellite to be displayed on a DOS computer equipped with a VGA or SVGA graphics card. The program is available in shareware from many sites. This means that it can be obtained by downloading and tried out free of charge. Only if the user

is satisfied with the result and wants to continue using it need they pay a contribution to the author. The same JVFAX program also provides display of amateur SSTV and radio facsimile mode.

In addition to a radio and a computer, the only equipment necessary for receiving and displaying satellite pictures is an APT adapter described in this article. Its input is the audio signal from the satellite receiver. It processes and decodes the signal, then sends its output to one of the computer's serial ports.

The construction of the adapter is clearly described in the article. It is comprised of an assembly of five integrated circuit logic chips plus three or four dozen other electronic components on two PC-boards. Complete instructions and a schematic wiring diagram are included in the article.

Amateurs who are new to weather satellites should consult the Weather Satellite Handbook and the Satellite Experimenter's Handbook, both published by the ARRL and available from amateur radio stores or directly the ARRL Headquarters. These reference books provide all necessary information regarding the satellite transmissions frequency bands, radios, and antennas suitable for reception.

PC-boards for the project are available from FAR Circuits, 18N640 Field Court, Dundee, IL 60118-9269 for $9.00, including domestic shipping.

Title>TA3:Transoceanic Ducting at VHF and Above
Author>Pocock, Emil - W3EP
Source>QST Mar 96, pp. 41-46
Abstract>Tropospheric ducts frequently occur over semi-tropical oceans at some seasons of the year. Independent of frequency, they provide propagation paths that cover long distances.

Digest>The author of this article, W3EP, is conductor of the regular QST feature: THE WORLD ABOVE 50 MHZ. In this article, he describes the anomalous long-range propagation effect that provides occasional signal paths for long oceanic distances on all VHF and UFH bands. It is caused by a phenomenon in the atmosphere called a tropospheric duct. The troposphere is the lowest layer of the atmosphere, extending from the earth's surface to the base of the stratosphere. It is the layer in which all weather phenomena occur.

Under normal conditions, the air gets colder at higher altitudes throughout the troposphere. Under certain conditions, however, temperature inversions occur where warmer air overlays cooler air underneath it. This may cause radio waves to bend downward, and is independent of frequency. If the inversion extends over a very wide area, it can cause radio signals to bend along the curvature of the earth and propagate for thousands of kilometers with little attenuation.

Inversions covering such very wide areas occasionally occur over oceans, more frequently in summer and fall seasons. They are observed primarily

at latitudes centered around 30-degrees, both north and south of the equator. When the conditions are right for ducting to occur, it is usually indicated by a wide and stationary high-pressure area at the surface. Meteorologists have noted such persistent highs in certain areas so frequently that they have named them "the Hawaiian high", the "Bermuda high", "the Azores high", and the like.

The Hawaiian high is responsible for the ducting that has allowed record-setting QSOs between Hawaii and California. In the Atlantic, the Bermuda and Azores highs are local manifestations of a high pressure area that often extends over the whole Atlantic. On the American side, it has resulted in many contacts from the southern states to various Caribbean islands, and from one side of the Gulf of Mexico to the other. At the European end, it has also provided contacts from western Europe, as far north as Scotland, to stations in West Africa and the Atlantic Islands of Madeira, the Canaries, and others. Transatlantic contacts seem possible and may occur in the near future.

A similar high exists routinely in the south Indian Ocean, during their summer months. Contacts from Africa to the mid-ocean islands of Reunion and Mauritius, and from those islands to the west coast of Australia seem very possible. Reaching further, a ducted contact between Australia and the South African mainland may someday occur.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Asst. Technical Editor

Title>PR1:ICOM IC-706 MF/HF/VHF Transceiver
Author>Healy, Rus - NJ2L
Source>QST Mar 96, pp. 61-66
Abstract>Performance review of the first MF/HF/VHF transceiver to include both 6- and 2-meters. The tiny rig provides most of the performance features expected in full-size models, plus more.

Digest>It seems that radio manufacturers are all trying to outdo each other by putting more and more features into smaller and smaller packages. With the IC-706, ICOM has outdone all their competitors by offering an MF/HF/VHF transceiver that covers all bands from 160- to 2-meters! The entire unit with the detachable front panel attached, measures less than 7- X 8- X 2.5-inches (18- X 20- X 6-cm.) and weighs only 5.5-pounds (2.75-kg.), not including power supply.

Not only that, they also have given the rig almost every operating feature that is possessed by full-sized rigs many times larger. The transmitter output is 100-watts from 160- through 6-meters, and 10-watts on 2-meters. Its receiver covers from 300-KHz. to 200-MHz., continuously, and it operates all of the usual modes: CW, SSB, AM, NBFM, and digital modes. It uses true FSK in digital operation. It also receives wide-band FM and provides scanning functions. In addition, it

has a built-in keyer and 101 memories.

The little rig even contains some features that many of its big brothers and competitors do not have, such as the option of listening to CW on either sideband, VOX with independent delay settings for each mode, adjustable CW offset with tracking sidetone pitch, first-in/first-out scratch-pad memories, speech compressor with adjustable gain, and software settings to modify the SSB transmit audio response to fit one's microphone and personal choices. It also provides optional computer interfacing and band-in-use outputs to operate external linear amplifiers and for remote antenna switching. To enable the rig to handle the heat dissipation of its 100-watt transmitter, the designer made the chassis a die-cast heatsink on which the PC-boards are mounted. This also makes the rig exceptionally rugged. Power requirement at 13.8-volts is a nominal 20-amps while transmitting; it drops as low as 1.5-amps when receiving with the output squelched.

With all of those functions and operating choices, the designers had a major problem of how to provide all of the necessary controls on a front panel only 2.5- X 7-inches (6- X 18-cm.) in size. The tuning knob, alone, takes up the full height and about 2.5-inches (6-cm.) of the width, leaving only about 4.5-inches (11-cm.) of width for the LCD digital display and all other controls. Their solution to the dilemma was a clever system of menus, with function keys that access the menu choices, plus a number of multi-function buttons. In addition to the tuning knob, there are only two other pairs of concentric control knobs. One is RF/SQL that acts either as the RF gain or the squelch control; the other is RIT/Shift.

Most of the control buttons initiate at least two different actions. Pushing the button briefly gets one action; pushing and holding it for two seconds or more gets another. This scheme, plus a hierarchy of menus that are displayed on the backlighted LCD digital display, provide the flexibility to control the inherently complex functionality of the rig.

The reviewers found that, although the complexity was initially daunting, it did not take long until the control functions became essentially intuitive. The reviewer's summary states that the rig on all ham bands, up to and including 6- and 2-meters, provides all the functions and receiver sensitivity that could be expected. They did, however, criticize the transmitter's IMD. On HF, they rated its performance as acceptable, though not "stellar"; but on 6- and 2-meters, the distortion is bad enough that it may cause significant splatter, especially if used with an amplifier. As for receiving, the ARRL laboratory tests of dynamic range, IMD, and sensitivity indicate that the performance is entirely creditable, and not far below the very best of modern transceivers.

The manufacturer's list price for the IC-706 is $1560. An automatic antenna tuner for all bands except 2-meters, Model AT-180, is available for $599. Optional i.f. filters are priced at $84 to $106, depending

upon bandwidth. No a.c. power supply is listed.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Good Grounding
Author>Bloom, Alan - N1AL
Source>QST Mar 96, p. 82
Abstract>It is not true that good ground systems ameliorate RFI problems. The opposite is more often the case.

Digest>"Conventional Wisdom" among many hams is that the cure for many RFI problems is a good ground system. This letter refutes that concept and points out that good ground may even increase interference caused by a radio transmitter. But good grounds are important for protection from lightning damage.

Title>TC2:A Cure for Ford F-150 RFI
Author>Bergstedt, Dalton J. - W6AUH
Source>QST Mar 96, pp. 82-83
Abstract>How one ham solved RFI that interfered with the operation of the engine in a Ford F-150 pickup truck.

Digest>W6AUH owns a Ford F-150 pickup truck and has a Hustler whip mounted on the rear bumper. When he tried transmitting 40-meter CW while in motion, the engine coughed and, when he stopped at a stoplight, it stalled.

He found that the engine's distributor, in lieu of breaker points, generates an electronic timing signal which is fed through a 5-foot cable to an electronic amplifier where it is processed to form a high-voltage spark.

He discovered that the aluminum box holding the solid-state amplifier had no bottom plate. It was just filled with potting compound and screwed in place. He solved the problem by fabricating and attaching a thin-gauge aluminum bottom cover, installing split ferrite blocks on the wires leading to the box, and bypassing the same wires to ground with .003- or .005-uf. disk-ceramic capacitors.

Title>TC3:Ford Motor Company Comes Through
Author>Pagel, Paul - N1FB
Source>QST Mar 96, p. 83
Abstract>XE2LG had RFI problems with his Ford automobile. He asked for help from corporation headquarters, and received it.

Digest>In QST Nov 95 Technical Correspondence, a letter from XE2LG described his RFI problem with a 1994 Mercury Cougar. Whenever he

transmitted on 2-meters, the air-conditioning fan turned on full and he could not reduce its speed. He reported the problem to Ford and was given a new, shielded part for the fan control, which solved the problem. He wants, publicly, to thank Mr. Minifield of Ford for his help.

THE WORLD ABOVE 50-MHz (WA)
Conductor: Emil Pocock - W3EP
Contributing Editor

Title>WA1:What's New in EME
Author>Pocock, Emil - W3EP
Source>QST Mar 96, pp. 87-89
Abstract>EME contacts are becoming more common. New advances in UHF and microwave equipment open opportunities for many more amateurs.

Digest>In this month's issue, the regular monthly feature: THE WORLD ABOVE 50 MHz, reviews the 35-year history of Earth-Moon-Earth (EME) radio contacts, and also contains observations about the current status of uhf and microwave propagation, in general. Amateur QSOs via the EME path, which seemed almost miraculous 35-years ago, have not yet become a matter of "ho-hum" routine, but are certainly much more common. There are at least a dozen stations now operating that have contacted 500, or more, other hams around the world via EME, and two or three "big guns" have logged more than 1000!

Recent advances that have made microwave receiver front ends capable of low noise figures, coupled with the ready availability of easily-converted TVRO dishes and surplus travelling-wave tubes for relatively low-cost stations above 2.3-GHz., make EME and terrestial long-haul contacts available to many more hams. Now some surplus solid-state amplifiers are becoming available that can generate 10-watts, or more, at higher microwave bands.

In this same isse of QST, the publisher included an editorial titled: "Do We Really Want Our Microwave Bands?", which called attention to how few hams are taking advantage of the opportunities that microwave radio presents. Also, an article presented the results of the latest 10-GHz. Cumulative Contest, which demonstrated that even on what used to be known as "X-band" and considered impossibly exotic for anything except radar, "QSOs of 300- (to) 500-km. along the East Coast are...everyday facts."

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:Inexpensive Etching Tanks
Author>Olson, Robert - WD4OHD
Source>QST Mar 96, p. 80
Abstract>Use molded PVC card-file boxes as etching tanks for small-size PC-boards.

Digest>This letter points out that, when etching PC-boards, it is economical to use an etching tank not much larger than the size of the PC-boards being etched. Molded vinyl card file boxes make excellent tanks and are readily available in sizes for cards of 3- X 5-, 4- X 6-, and 5- X 8-inches (76- X 127-mm., 102- X 152-mm. and 127- X 203-mm.)

Use a small aquarium air pump to blow air for agitating the etching. Drill a hole through the top cover, thread a piece of plastic tubing through it, and cement the tubing, on its side, to the bottom of the box with hot-melt glue. For etching, put the PC-board on the bottom, cover it with etchant, close the lid, and turn on the pump. The air bubbles will keep the etchant well mixed and results should be good.

Title>HK2:PVC-Pipe Wall Feedthrough
Author>Edwards, A. W. - K5CN
Source>QST Mar 96, p. 80
Abstract>Describes feedthrough insulators, made of PVC pipe containing brass threaded rods, that are effective for penetrating the walls of buildings.

Digest>For penetrating walls, K5CN makes feedthrough insulators of half-inch (13-mm.) diameter PVC pipe. For single-wire leads, or for open-wire line, he cuts the plastic pipe long enough to go through the wall and leave enough additional length for a pipe cap at both ends. He drills a hole in the center of each cap and inserts a threaded brass rod to run full length and protrude at both ends. He then threads two brass nuts on each end. Copper spade lugs are soldered on the wire ends and pinched between the nuts, making secure connections.

For wide-spaced open-wire lines, he uses two pipes spaced appropriately. For narrow lines, he uses a pipe of sufficient diameter to hold two spaced rods. When finished, he waterproofs the ends.

Title>HK3:Baseball Card Holders Store Small Parts
Author>Cull, Charles D. - K5GBP
Source>QST Mar 96, p. 80
Abstract>How one amateur stores small electronic parts in pockets on ring-binder pages, designed for holding baseball cards.

Digest>Baseball card holders are sold having nine pockets and punched for 3-ring binders. K5GBP uses the pockets to store small electronic parts. With the parts in each pocket, he inserts a slip of paper identifying them. He thens stores them in binders.

Title>HK4:HAM-M and Tailtwister Rotator Modifications
Author>Strieter, H. Dale - W4QM
Source>QST Mar 96, pp. 80-81
Abstract>How the author improved the control-cable connections that were causing problems with his antenna rotator.

Digest>W4QM states that these rotators share a shortcoming in the control-cable attachment. As constructed, they require eight control wires to be individually connected with terminals. The ones supplied are made of plated steel, and they corrode badly.

To alleviate his problems with them, he discarded the terminal board and connected a short length of cable directly to the rotator circuitry. The other end of the cable was attached to a barrier terminal strip inside a weather-proof junction box.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Mar 96, pp. 51-52
Abstract>Questions and answers of especial interest to newcomers.

Digest>Questions discussed in this issue include: the differences between RTTY and Packet; why antenna gain is more important in transmitting than in receiving; the PANSAT navy amateur satellite; overheating in microprocessor chips; frequencies used by Voice of America broadcasts; calling CQ on repeaters; Morse code practice; and other subjects.

Title>NHC2:A Worldwide Propagation Beacon Network
Author>Wolfe, Frank - NM7R
Source>QST Mar 96, pp. 53, 57
Abstract>Suggests that hams use the continuous transmissions from Maritime Coast Stations as propagation beacons.

Digest>Beacons are stations that transmit constant signals. By listening on their frequencies, one can tell immediately how well, or whether, signals are propagating over the path from the beacon's location to the listener.

There is a well-established worldwide network of amateur beacons on the 20-meter band at 14.1-MHz., but their utility is badly compromised by the almost continuous QRM on that frequency from digital-mode signals. This article points out that there are a large number of Maritime Coast Stations in operation, used to communicate with ships by radio teletype. They are located all over the world. They use much higher power than amateur stations, typically 10- to 15-kilowatts, and are operating on many frequencies scattered over the HF spectrum between 4- and 26-MHz.

Most of them transmit continuously. If there is no traffic, they transmit repeated marker signals, followed by the stations' three-letter callsigns in Morse code every few seconds.

The article lists some 30 or 40 stations in all parts of the world, by call letters and locations, but does not indicate their operating frequencies. It cites a reference book: THE GUIDE TO UTILITY RADIO STATIONS, published by Klingenfuss Publications of Germany. Although the article does not mention the availability of the publication in the USA, at least one amateur radio catalog outlet lists it at a price of $39.95.

Title>NHC3:DXClusters
Author>Ford, Steve - WB8IMY
Source>QST Mar 96, pp. 54-57
Abstract>DXClusters are VHF nets that DX enthusiasts use to alert each other of rare stations that appear on the bands. Describes how to find and join one, or to form a new one.

Digest>Serious DX-chasers today no longer spend most of their time listening across the bands for rare signals. Most are tied into packet clusters that alert them, continuously, of what rare DX is on what band, at what frequency, and with perhaps a word about their operating procedures.

A packet cluster is comprised of a group of amateurs who are interconnected by VHF or UHF packet, or even on Internet. They volunteer to share DX information with each other via their interconnection. When one member finds a highly-desirable DX station on the bands, they are honor-bound to put the information on the cluster for all to use, as soon as possible.

Most clusters use software that was developed by Dick Newell - AK1A. It provides a variety of commands, the use of which allows the user log on, download any or all current information, post the details of new information, chat with others who are currently logged on, and perform a myriad of other functions.

There are clusters in almost all urban areas, and even in some lightly-populated areas, in the USA. A list of names and addresses of almost all packet clusters is available from the ARRL infoserver, either by telephone bulletin board or by E-Mail. The "Hiram" BBS is at: (860) 594-0306. On Internet, it can be obtained by sending an E-Mail message to: info@arrl.org, leaving the subject line blank and with a two-line text, as follows:
SEND CLUSTER.TEXT
QUIT

In case there is no cluster available in one's neighborhood, consider starting a new one. Information about the software can be obtained from: Pavilion Software, 8 Mt. Royal Ave., Marlborough, MA 01752. Enclose an SASE.

Title>NHC4:A Very Low-Cost Tower
Author>Weisman, Sumner - W1VIV
Source>QST Mar 96, p. 58, 60
Abstract>Describes a 20-foot mast made of sections of TV-mast tubing, yet able to hold a wide-spaced four-element 10-meter beam through severe winter weather.

Digest>W1VIV put up a very inexpensive 20-foot mast that is capable of holding a wide-spaced four-element 10-meter beam through rather severe weather. It is mounted on the side of the house at the point of the gable and made of two ten-foot lengths of steel TV mast, such as those sold by Radio Shack. One end of each piece is swaged to a smaller diameter so that it can fit into the unswaged end of a similar piece.

The author supported the lower end of the bottom half with a pair of wall brackets which protrude far enough that the mast clears the roof overhang. Since the two brackets support the lower piece in a cantilever fashion, he did not think it necessary to guy the mast at the junction between the two sections. At the top, he attached three guys, spaced 120-degrees apart.

In spite of the light-duty materials and the relatively heavy wind loading of the beam on top, the resulting mast has survived four New England winters, one of which was exceptionally severe.

Title>NHC5:Excuse Me, May I Interrupt?
Author>Peterson, L. Rodney - N9AKE
Source>QST Mar 96, pp. 59-60
Abstract>Computer peripheral equipment must be able to "interrupt" the operating system whenever necessary. This describes how DOS-based computers handle interrupt requests from modems, and other peripherals.

Digest>Mr. Peterson addresses a problem that one sometimes encounters when connecting peripheral equipment to computers. That includes printers, keyboards, TNCs, sound boards, and the like, each of which must establish two-way communication with the computer central processing unit (CPU). When it is ready to do so, such as when the operator presses a key on the keyboard, the peripheral item sends an interrupt request (IRQ) on a special channel. Each computer has a list of IRQ numbers and defines what they may be used for. When it is stated that a particular computer is "IBM compatible", one of the things that this means is that it uses the same list of IRQs as the IBM.

All IBM-compatible computers provide at least two serial communications ports, commonly called COM1 and COM2. In machines using Intel chips '286, or higher, COM1 always uses IRQ4 and COM2 uses IRQ 3. Typically, COM1 is used for a modem but some software packages use that for other purposes, such as a mouse. When two devices use the same IRQ, the computer will "hang", i.e. stop operating. At that point, the operator

has to step in and shift one of the devices to a different serial port, or else stop using it. In the example just stated, it is usually easy to shift a modem to COM2, which would solve that problem.

Whenever one wants to install a new peripheral, they should very carefully read the instruction material, not only about the new equipment but also that of all existing peripherals to make sure there will be no conflict.

GENERAL INFORMATION ARTICLES (GI)

Title>GI1:DXing from the Golden Land
Author>Kennamer, Bill - K5FUV
Source>QST Mar 96, pp. 28-31
Abstract>Martti Laine - OH2BH has succeeded, once more, in opening a dictatorial, secretive, and suspicious country to amateur radio, at least temporarily.

Digest>Martti Laine - OH2BH is one of the most indefatigable globe-trotting DXers in the amateur radio world today. He has convinced several of the most reclusive and authoritative governments on earth to permit at least limited amateur radio activities. One of the nations that seemed most unlikely to allow such activities is Myanmar (formerly Burma). But through persistent efforts extending over several years, he was able to convince even that nation to allow him and a small number of other hams to set up and operate an amateur radio station on the top floor of a major hotel in Yangon (formerly pronounced and transliterated Rangoon). This is the story of the final negotiations that eventuated in success, and of the resulting "DXpedition" that was conducted in a suite in a luxury hotel.

Title>GI2:Low-Power Contesting
Author>Arland, Richard H. - K7YHA
Source>QST Mar 96, pp. 47-48
Abstract>Describes the challenges of operating with low-power (QRP) in contests, and the satisfaction that comes from success in scoring points in competition with high-powered stations.

Digest>In this article, Mr. Arland makes a persuasive case that entering contests with power output limited to no more than 5-watts (thus qualifying as "QRP") represents an interesting challenge that will go far toward honing the operating skills of any ham. If one is able to run up a respectable score of points in a contest competing with medium- and high-power entrants, it must give a great deal of satisfaction.

The author offers a number of helpful suggestions. Among them are:
Be sure to read the contest announcements carefully.
Use the "search-and-pounce" technique, meaning to find a station that one wants to work and insert your call

immediately after their latest QSO ends.
Stay away from the bottom end of the bands where high-power stations congregate. Work the less-crowded higher frequencies in the band.
Use a computer with good contest-logging software. It saves much time over hand methods and "dupe sheets".

Although the text of the article is persuasive and well written, its message is blunted by two of the photographs that illustrate it. Whereas the essence of QRP operating is to get good performance from very modest equipment, one photo features AA2U, who is called "the king of QRP contesters". Another photo shows his "antenna farm" that includes a 90-foot crank-up tower with two KT-34XA beams at 38- and 90-feet heights, plus a 2-element 40-meter Yagi and beams for 12-, 17-, and 30-meters! In addition, it holds an 80-meter full-wave loop.

Title>GI3:Baker to Vegas Challenge Cup 1995
Author>Keiser, Mark - N4OGL
Source>QST Mar 96, pp. 49-50
Abstract>Describes the use of GPS equipment to track each runner in a race through Death Valley.

Digest>Each year, the Los Angeles Police Revolver and Athletic Club sponsors a 120-mile relay race for runners through Death Valley. In recent years, more than 150 teams have participated, representing police departments from all over the world.

In the 1995 event, amateur radio support involved hundreds of hams who were serving their own local police departments. It was decided to use the GPS satellite navigation system and APRS operating software so that the location of every runner would be continuously transmitted via amateur packet to a central location. There it would be tracked on the APRS map in a computer. In this way, it would be possible to assure that any kind of medical emergency, or any other special need by any participant, could be handled in a minimum of time.

Every runner was accompanied by a "follow van", and all were equipped with Trimble Navigation GPS receivers, Alinco DR-1200T data radios, and AEA PK-12 GPS-Compatible TNCs. All equipment was loaned by the manufacturers for the duration of the event. The equipment worked superbly well and provided accurate and reliable tracking data throughout the race.

SB QST ARL ARLB011
ARLB011 Vanity calls delayed

ARRL has learned that the FCC may delay until mid-1996 the
announcement of when it plans to open the first gate or gates of the
vanity call sign program. A Commission spokesman says the FCC first
wants to deal with remaining Petitions for Reconsideration it has
received. The FCC had been expected to announce opening dates early
this year.

FCC vanity call sign application Form 610V is now available, but the
FCC will not accept completed forms until it opens the appropriate
kfiling gates.

Prospective applicants can get the FCC Form 610V package by writing
ARRL, 225 Main Street, Newington, CT 06111. Please include an sase.
Form 610V also is available from the FCC via the Internet at
http://www.fcc.gov/Forms/Form610V or
ftp://ftp.fcc.gov/pub/Forms/Form610V/, or by fax at 202-418-0177.
Ask for Form 006108.

The FCC's Forms Distribution Center also accepts orders for Form
610V at 800-418-3676.

I know what the others are going thru, Just about every issue I get
is damaged, some minor others I just throw in the trash.
Every since the ARRL done away with the wrappers (plastics or paper)
my QST's look like crap when they get here. They will replace
the damaged issues no problems, but they should get a 1-800
number so I dont have to keep paiding for the call to get it
another copy. Once in awhile is not bad, but seems to be a every
other month thing. Guess if they can call a scaffold setup
on a rock a country they're not to worried about a damaged QST.

Johnny (jrosenw@pgh.nauticom.net) wrote:

: I had a lot of people who said I was an idoit (only not so eloquently).
: A few people, however, did try to respond with more than an insult.

It's one of the classic fire-starter questions and seems to work every time for the baiters...

: A lot of people tried to rationalize it with reasons such as
: "I want to use my new $2k rig as a signal generator so I can fix my
: $25 handheld" when they could get a proper signal generator for about
: $10 at a hamfest.

Well, a 765 gives you a *SYNTHESISED* signal generator with 10Hz resolution and TCXO stability (if you fit that option - hey, that's a manufacturer supplied hardware mod!) that is going to cost an awful lot more than $10 Further, ordinary sig gens have AM and FM, but never SSB in their modulation capabilities.

I use a 765 out of band. I use it on low est power via a microwave quality bird attenuator as a signal source for developing my own crystal filters. The 10Hz steps, the accuracy, the stability and the phase noise (mine is the unit whose phase noise plot appears in the current ARRL handbook) are ideal. I have an expensive lab quality sig gen (pre-synth vintage) that simply drifts a little... and a little is far too much. I use the 765 as an SSB source to test IF sections of receivers under development.

Things are well screened - leakage would spoil the ability of the attenutors I'm using to set the level applied to the system under test, a close field probe on a spectrum analyser verifies that nothing significant is radiated.

: Some wanted to use it for MARS, but I guess they
: didn't know that they could call the manufacturer who would supply
: that information for free.

Fair point!

: Some wanted to take the rig overseas where
: the band allocations are different. This point was probably the only
: valid reason that anyone pointed out.

Doesn't the 765 already have transmit enabled over a bit more than the superset of all amateur allocations?

: But I would suspect that even in
: the case where the manufacturer made firmware allowance for this, that

: most of those requesting the mods were after something else anyway.

I rather think so. I've seen a lot of old Yaesu's bought by
beginners, from rally fleamarkets, that had been recrystalled for all
sorts of naughty frequency bands. Looked like they used a blow torch to
do the job,too.

: A few wanted their rig to pull 'double duty' and use it in another service
: as well as in the ham bands. I wonder if they ever checked into those
: other services to find out if type acceptance was a requirement or not.

They can't have, or maybe chose to ignore...

: I think that most hams just think it is sexy to tell their friends
: that their new rig is a 0-30Mhz general coverage transmitter. And they
: are willing to make the occasional mistake at 3am when their eyes can't
: focus, and transmit out of band, and maybe get an NAL.
: I have a real problem with anyone who goes out and spends $2k on a rig
: and then immediately gets on Usenet asking for mods. I guess the best
: thing that happened as a result of my questioning this was that I got put
: into a lot of peoples 'kill' files. ;-)

I'd not thought of "bragging rights", I think you've hit the bull's
eye. If something's modified, it's bound to be esoteric, isn't it?. Some
sort of territorial marking ritual?

Cheers,
David GM4ZNX

> band I should select for evening use?
>>>>
James,

Right now, I think 40 meters is the best bet for long distance work; 75/80 is pretty good, and if you have the room, there
seems to be a lot of activity on 160. I would suggest using open-wire feedline and a tuner, then you can work all bands.
In a few more years, the higher bands should be active again.

5017. Contest announcement: GridLoc

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-09 00:00:00 UTC
From: Robert Barron <barron@liant.com>
Message-ID: <316A82E9.3B3C@liant.com>
Source record: 228028

International HF Grid Location Contest (GridLoc)

I. Announcing
Second annual International HF Grid Location
(GridLoc) contest.

II. Objective
For Amateur Radio operators around the world to
contact other Amateurs in as many Maidenhead grid
squares as possible during the contest period.

III. Contest Period
1200 UTC April 13 to 1200 UTC April 14, 1996
(Second full weekend of April). All entrants may operate a
total of 18 of the contest's 24 hours. Off periods must be
no less than 30 minutes.

IV. Operator Classes
There is only one power class (less than 150 watts).
1. Single Operator, phone only, CW only and mixed
mode. One person performs all operating and logging
functions. Use of spotting nets, DX Alert Packet Systems,
telephone, etc., is not permitted.
2. Multi-Operator, Two Transmitter. Mixed mode.
Only 1 signal per band permitted. Once a transmitter has
made a contact on a given band it may not change to
another band for at least 10 minutes. All transmitters and
receivers must be located within a 500 meter diameter
circle or within the property limits of the station licensee's
address, whichever is lesser. The antennas must be
physically connected by wires to the transmitter.
3. Rover. Mixed mode. One or two operators of a single
station moving between two or more grid squares during
the contest, and making contest contacts, using the same
equipment and antennas at each site. A rover station should
sign "rover" after their callsign for voice and "/R" for CW.

V. Modes
Contacts may be made using CW or SSB.

VI. Bands
All HF bands (160-10 M) excluding the WARC bands
(30, 17, 12 M).

VII. Valid Contacts
A given station may be contacted only once per band

mode from a given grid square. Rover stations may be worked once per band mode in each grid square they visit.

VIII. Exchange
All stations must transmit a proper Maidenhead grid square (i.e. EM10) and an operator name. If the Maidenhead grid square is unknown stations may be counted for QSO credit only.

IX. QSO Points
Count 1 QSO point for each valid contact made during the contest.

X. Multiplier Points
Count 1 multiplier point for each Maidenhead grid square worked per band, not per band mode. Stations not supplying valid Maidenhead grid squares do not count for multiplier credit.

XI. Final Score
Total QSO points times the total multipliers equals the total claimed score for all entrants except rovers. Rover stations must add the total number of QSO points from each grid, add the total multipliers from each grid and multiply these to produce the final score.

XII. Score Submission
Log submissions should be sent within 30 days of the end of the contest to:
Internet: geoiii@bga.com Mail: GridLoc
P.O. Box 180703
Austin, TX 78718-0703
GridLoc is an Open Log contest and all log submissions become the property of the GridLoc organizers.

XIII. Awards
To be decided.

Q. Are there any rules changes this year?
A. Yes. This year stations may be worked once per band mode instead of just once per band. This rule change aligns GridLoc with other multi-mode contests (like the IARU HF Championships). For example, mixed mode stations may work each other on 20M phone and then again on 20M CW. Both QSO's count for 1 point but any multiplier credit applies only once.

Q. Why use Grid Squares as multipliers?
A. More common than countries and zones, Grid Squares provide a large number of multipliers which can be worked on each band. This makes the flavor of this contest different from any other since WPX multipliers can not be worked on each band.

Q. How do I determine my Grid Square?
A. There are a number of ways to determine this. Ask other amateurs in your area (especially VHF operators) what the grid square is. If no is knows either consult the ARRL grid square map (which will be useful only if your community is clearly within a grid's boundary) or type in the BASIC computer program available from the ARRL Operating manual. It will determine your grid square based on longitude and latitude.

Q. Why is the contest 24 hours long?
A. To give everyone around the world equal opportunity to operate at peak propagation hours.

Q. Why does it start at 1200UTC (7AM CST)?
A. This start time gives everyone around the world ample time to get home from work on Friday and prepare for the contest the next day. The contest ends before Monday all over the world.

Q. Why limit stations to 150 watts of power?
A. One hundred fifty watts is more than enough to work stations around the world. Higher power would raise QRM levels on the bands and result in complicating the GridLoc rules with the additional categories.

Q. What are the suggested frequencies?
A. There are no suggested frequencies. However it is expected that most activity will be centered around the lower edge of the general sub-bands and the Novice/Tech portions of the 10 meter phone band.

Q. Are there any DX awards for HF Grid contacts?
A. Yes. The Japanese Amateur Radio League offers the Worked All Grid award to Amateurs who work stations in 100 or more Grids. Endorsements are available for multiples of 100 additional grids. For more information write to:
The Japan Amateur Radio League, Inc.
Award Desk
14-2, Sugamo 1-Chome, Toshima-ku,
Tokyo 170, Japan

Q. Why are packet spotting systems not allowed?
A. Packet is not allowed for single operators only. An entry using a packet spotting network would be part of the multi-two category with "net" as one of the operators.

Q. What is an "Open Log Contest"?
A. An Open Log Contest is a contest in which operating logs submitted for entry to the contest organizers are made available to the public. It is the intention of the GridLoc organizers to make all of the submitted logs available

electronically. This allows everyone to study the techniques of the top operators and to analyze logs using common software tools.

Q. Do any logging programs support GridLoc?
A. N6TR's logging program TRLog supports the GridLoc contest starting with version 5.19. W5XD's logging software WriteLog (for Windows) now includes a GridLoc multiplier module.

Q. Will there be any awards?
A. Yes. The organizers will produce awards based on the amount of activity for the contest. At this time it is certain that continental winners in each operating category will receive certificates as will the top ten scorers in each division worldwide. Certificates for the top college clubs are also planned.

Q. Where will the results be published?
A. There are several possibilities being investigated. The organizers hope to have the results published so as to reach the most Amateurs as possible.

73,

Robert Barron, KA5WSS
barron@liant.com

I can help. I am in the packaging industry. In the past two years, the cost of the polyethylene used in the
plastic bags has increased over 53% and kraft, as in boxes and wrapping paper has doubled.

I can assure you the cost to put a magazine is more than a few pennies. I seel the machinery and we are talking
in excess of 20,000 dollars, plus the cost of the material. Plus the fact the post office really doesn't like
that type of mailing wrapper...get stuck in their automatic sorters

I am sure if you talk to the right people(s), they might send a specially wrapped magazine to you and
whomever.

gud luk

>VE anyway, so the point is moot. That particular VE team *won't* let you copy
>dots-and-dashes: see http://www.cc.columbia.edu/~alan/ham/exam-rules.html
>for details.)

Looking there I found the following:

"Writing down dots and dashes and then after-the-fact transcription to
text does not demonstrate the ability to translate (copy) the Morse code
at the FCC required transmssion speed. Please do not transcribe dots and
dashes or your exam will be deemed invalid."

Why do they care how you write it down? What if I write in shorthand?
What if I don't write down anything at all?

Writing dots and dashes is not a very efficient way of copying code (and
certainly isn't practical for 13 or 20 wpm) but I would say that it is
copy - if you can answer the questions using whatever you writen down
(not using anything else other than your brain).

Seems rather presumptuious of the CUARC-VE to say dictate how you copy
code with your pencil and paper.

The algorthyms are developed upon research usually funded by government or
private source. Commercial propagation prediction programs were developed
based upon this research. I have a modified version of MICROMUF which I have
implemented in C sourcde code. I was hoping to find the "specs" of some of
the other methods to compare. What I';m working towards is a package that is
similiar to SKYCOMP, but will be FREEWARE. I'll keep everyone posted on the
results.
But, I'd still like to compare my results with some of the other methods.

>Howdy,
Howdy yerself. I just had to answer yer CQ...

>Now there's this bunch of no-code techs telling us that you can't call CQ
>anymore.

Well, way back in 1973... some guy pulled up to the shop who knew I was a ham and showed me his new mobile radio. "Works through repeaters", he told me. So I grabbed the mic and spewed out about 15 CQ's followed by my call sign. Some guy comes on and tells me about how I'm not supposed to be calling CQ and should simply say my callsign followed by 'monitoring'. Once. I was not impressed. Didn't seem like no ham radio to me.
So I don't think you can blame it all on the godless techs, Jack.

>"A handie talkie and a belt clip is not an amateur radio station."

Nope. You need a gun too, according to Burt.

I don't really have a problem with that.

The essence of amateur radio is experimentation. I don't think
I've ever owned a radio that I didn't modify in some manner to
make it "better" (at least better in my mind!).

Maybe it's the new substitute for souped-up '49 Fords?

>rig. Also it doesn't receive out of the band. But if your looking for
>a 2 meter only HT, then you can't beat a HTX-202. I owned one for a
>long time before selling for something that would receive out of band.
>I like to listen into local police and weather. Great HT and great

I agree that the HT is a great buy for the money. I have one and the
volume is louder than most HTs, power output is higher and intermod is
non-existent. There is a birdie on 146.76 caused from the keyboard
oscillator and the ER2 code will come up if you transmit with 13.8v
power into the rubber duck. Other than that, there are no problems
with the HT. I love mine!

Hello all,

I own an FT10 5W 2M XCVR which I really like. Many nice features highlight this radio however I can't seem to figure out why when I use standard headphones (with mono adapter since it doesn't seem to put out in stereo) I can't seem to transmit. Is there something I'm missing. I'd like to be able to use headphones to listen and still transmit (to flesh out weak receive signals)?

Thanks in advance,

73,
Dave Bernazzani

To all radio amateurs

SB QST ARL ARLB020
ARLB020 Milt Chaffee, W1EFW, SK

Past New England Division Director Milton E. Chaffee, W1EFW, of Southington, Connecticut, died April 8, 1996. Milt was 83. He served as director from 1957 through 1964. Milt was a long-time ARRL member and official, and served in many League capacities, including assistant section manager and section traffic manager in Connecticut. He was an active CW and traffic enthusiast. He also served on the QCWA board of directors.

Connecticut Section Manager Betsey Doane, K1EIC, called Milt's passing ''the end of an era.'' ARRL Executive Vice President David Sumner, K1ZZ, added: ''Milt was a stalwart traffic handler who set and maintained the standards for the rest of us for more than 40 years.''

A memorial service for Milt Chaffee is set for Sunday, April 14, 1 PM, at The First Congregational Church, Route 10, Southington, Connecticut. A reception will follow.

Jim, at the moment they have not opened any gates. Gate one will
ofcourse be the first one launched. April the 15th the new part 97
will be effective which spells out the vanity call sign system. I am
the guy who started the vanity movement by writing my congressman
who happens to sit on the telecommunications sub-committee. The
FCC year after year refused to take action on my petitions so I had
to go thru congress to get some action. That action was signed into
law on Aug 10, 1993. As of today it still has not been implemented.

David; I too like my HTX-202, but mine has developed an annoying
problem. It can no longer transmit in the high power mode.
<<

I am also happy with my 202, but it developed a similar problem.
Sometimes, when I press the PTT switch to transmit, the transmit light
comes on, but nothing is transmitted (at least not enough to key up a
repeater I usually have no trouble with). The problem is intermittant,
and it has been suggested that the final transistor has desoldered due to
being used on high power with the car adapter. (it gets pretty hot, and I
don't use the belt clip, which acts as a heat sink). Dunno.

Tim,
Unfortunately we have many selfappointed radio cops around that have
no idea what they talk abaut. Go ahead use your radio don't worry you
are legal. Type acceptance is used to controll bussines. You can build
and modifie for your own use anything you want as long as it meets
specs for unwanted radiation and is used within the limits of your
license.

From: subbustr@whidbey.net (DAVE M . SCHERTZER)
To: "Donald J. Bensch Sr." <dbensch@uoft02.utoledo.edu>

Here iz what I got....

>| Yaesu FT-840 Expanded RF
>| All band modification:

1. Remove ant from radio.
2. Remove top and bottom covers.
3. On Local Unit , TEMPORARY jump TP-2003 to ground.
(Take a wire lead + attach to the metal case)
4. Press & Hold (SSB) + (AM) and turn power on.
(Display will show 02-OFF)
5. Rotate main control to show 02-ON
6. Press AM. The display should read (7.000.00 LSB)
7. Turn radio off.
8. Press and hold the memory (DOWN) + (UP) buttons and turn radio ON.
9. Turn the radio OFF.
10. Remove the jumper to ground on TP-2003.
11. Reassemble radio.

Think u were missing step #6. Mod taken from Book 8A
Gud luck.....hope this helps....dave

~~~~~~
From: G7MRI@GB7LWB.#27.GBR.EU
To : YAESU@WW

Well guys i see that many people have been looking for mods for
this radio so here is the out of band tx mod.

1. take off bottom and top covers.
2. connect a jumper from point TP2003 to ground. this is temporary
while preforming the programming steps. that point is in front and to
the edge of the lithium battery.
3. with the ft-840 off, press and hold the (SSB) & (AM) buttons at the
same time. turn on the rig, then release the buttons simultaneously.

4. the display will show (02-ON). press the (AM) button to confirm
setting: it should read 7.000.00 LSB. turn rig off.
(If the rig does not show 02-on move the main freq knob to change it)

5. press and hold in the MEM , (DOWN) and (UP) buttons while turning
rig "on".
6. turn pwr off, and remove jumper.
7. if you have a problem, dump the backup memory by switching the back
up switch off per the manual.you can then redo the steps.

If you know of any mods please let me know and if you can find out what
01-ON/OFF to 09-ON/OFF i think it goes to, what do the other settings do.

73's de John
G7MRI@GB7LWB.#27.GBR.EU
~~~~~~

The mod below was the only mod for the FT-840 that I could find on the net.
THE MOD BELOW DOES NOT WORK!!! It is listed here for reference only.
Archievers might want to remove this mod if they have it.

~~~~~~
From: paul@theborg.mlb.fl.us (SysAdmin)
Subject: FT-840 Expanded RF Mod
Date: 10 Dec 94 08:02:20 EST

I saw many requests for this mod but never had a chance to post it till now.

Yaesu FT-840 Expanded RF
All band modification:

1. Remove bottom cover and locate vertical pin TP 2003.

2. Connect a jumper wire from this pin to ground.

3. Hold SSB button and AM button at the same time and turn the radio On.

4. Frequency display should read "02 OFF". Turn Frequency knob until display
reads "02 ON". Now turn radio Off.

5. Hold VFO/M button and UP and DOWN buttons at the same time and turn the
radio On.

6. Last, turn radio Off and remove jumper from Test Point 2003.

7. Reassemble radio.

This mod allows gerneral coverage transmit on the FT-840.
I assume no responsibility, proceed at your own risk.

> tim

Tim, if you use non-type accepted radio equipment in a service that requires type accepted equipment, you're in violation of FCC rules. Since amateur equipment (other than external HF amplifiers) doesn't require type acceptance, and doesn't *have* type acceptance for land mobile, marine, or aviation operation in any event, you can't use it in those services under normal circumstances.

Equipment for amateur use doesn't require type acceptance (aside from the notable exception of external HF amplifiers where it was imposed due to chronic modification and misuse of amateur amplifiers outside of amateur frequencies), but use of type accepted equipment *on the amateur bands* isn't *prohibited* either, so you can use Part 90 equipment modified to work on the amateur bands with no legal problems. (In fact, so modifying it may void its type acceptance, making that "problem" moot for amateur use.)

Now Part 97 does allow you to use "any means" to communicate in an emergency where there's an *imminent* threat to life or property without fear of consequences *under Part 97*, IE it waives "these rules" for those uses. That isn't, however, a blanket permission to use radios that are illegal in other services on those services, IE you may still be held liable under Part 90 rules. And it doesn't waive any liability you might incur under local and State laws having to do with "interference to an officer" or the like by coming up on and tying up a public safety radio system with your calls. It *does* let you run phone in a non-phone segment of the amateur bands, or data in a non-data segment of the amateur bands, it does allow you to run what would normally be excessive power, and it even would allow you to use a cobbled together spark transmitter that normally wouldn't meet Part 97 emission standards.

Implied in the *imminent* danger escape clause is the notion that such danger is unforeseen. If a reasonable person would expect a situation to be dangerous ahead of time, then the regulations require that person to have appropriate radio equipment for dealing with that foreseen emergency, because amateur radio is not to be used in lieu of a more appropriate radio service. This could mean that if you modify an amateur radio ahead of time with the *intent* to use it outside its legal purposes, you wouldn't fall under the protection of the escape clause. If you improvise on the spot, however, that would more likely fall under the escape clause.

This matter of *intent* is subject to debate, of course, but I would note that the FCC has ruled that mere possession of equipment modified to operate outside of its approved service is prima facia evidence of intent to violate the regulations, and subjects you to siezure and possible other sanctions. This has been upheld with regard to modified CB radios, and with regard to modified marine radios. Of course both those services require type acceptance while amateur radio doesn't, but it is the intent to violate that has been upheld in these cases, not just violation of type acceptance, IE it falls in the same category as "possession of burglar tools", so I think it might also apply to amateur radios modified a priori to work outside the amateur service.

The FCC *usually* applies a "reasonable man" standard, and most reasonable men might think using an amateur radio outside its allowed frequencies during an emergency would be fine. However, even "reasonable" men disagree from time to time, so you're taking a risk. You have to weigh that risk against the risk of doing nothing on a case by case basis. At a minimum, you should ask yourself, "Am I willing to lose my license over this?" and be willing to answer "Yes!" before doing it.

I agree, and furthermore, I would suggest that the 4-letter words
should only be used when you have something *really* significant to
say. So it's use by the previous poster is irrelevent really....

Russell, as long as the "boatanchors" are not of the marine
variety, comments/questions/discussions about them are
welcome right here. After all, this is the "misc" group.

Some people seem to feel that too many fraudulent handicapped waivers are being given. I don't know how many appear at other VE sites but our local sessions have had only 2 in the last year.

I believe that the problem is more of examiners feeling that someone is cheating on what others have had the need to pass.

Strangely enough VE examiners are overlooking a process that would invovle a little work for them but may make everyone fell better.

Even before the handicapped waiver was introduced VE's had the authority to administer a handicapped test in any manner they considered appropriate to accommodate the examinee. This leaves a huge range of consideration in administering a CW exam.

The best part is that the examinee passes some form of legallty acceptable test rather than just the waiver. If nothing else the VE with a little imagination in how to overcome the handicap feels better that he hasn't had one slipped passed him as a phoney waiver.

An examiner does not even need a disablity form or letter from a doctor to do this when a disablity can be shown to him. Only if he does not accept the truth of a disablity existing can he be overridden by a waiver application.

I have in all cases called the ARRL VEC office and described the reported handicap and asked them to specify a procedure. They have been more than willing to do so.

As a reminder to all VE's, we are merely allowed to act on behalf of the FCC to administer exams, just as the civil servants in Field Offices of years gone by were allowed to. When the day comes that we cannot administer the exams as specified by LAW then we need to think our own personal attitude and involvment. An examiner who fails to live up to the literal interpretation of the laws in admisitering an exam leaves himself, the team and ARRL open to litigation for failing to honor a persons civil rights. Look at it from a society with all too many lawyers in it and would you care to defend yourself ?

The ARRL has asked for protect under just such issues but we are not yet protected. Don't you wonder why such protection is being sought ?

If personal opinions keep you from following the procedures allowed for handicapped people, then resign your VE authority. Maybe a large number of people doing that would have an impact also. Just don't get into trouble for a cause that isn't worth it.

Phonetic Alphabets (Alpha Bravo etc)
April 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.
This collection currently includes alphabets for the
following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Chinese and Esperanto.

This posting supersedes the one of 27th February. Changes
are minor.

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest. In the case of Web servers I ask that there be no
reformatting and suggest the use of the XMP directive.

* Following discussions last year this article is not now
* posted to alt.usage.english.

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet is approved by the International Civil Aviation Organization, the FAA and the International Telecommunication Union; note that different bodies prefer different spellings, so one also sees: Alfa Juliett Juliette Oskar Viktor.
Dates from about 1956.
See also http://aviation.jsc.nasa.gov/alphabet.html, which includes information about pronunciations]

[UK police use Indigo(?) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book has: Beta Ultra Volvo Whisky X-ray]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories. An "analogy alphabet" in a Kenyan directory has Charlie and no Y. A Swiss directory: Andrew Charlie Lussy Queenie Sugar. French/German vocabulary books: Andrew Charlie Lucy Mike Nelly Sugar Xmas. English phrase book for Spanish speakers: Charlie]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory

has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich]

Telephone alphabet used in India:

Army Brother Cinema Doctor English Father Gold Hotel India Jam King Lady Mother Navy Orange Paper Queen Raja Sister Table Uncle Victory Water Xray Yellow Zero

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany Honolulu India Japan Kilowatt London Mexico Norway Ontario or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile, Finland, Greece, Guatemala, Hawaii, Italy, Kentucky, Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas, Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[See also http://aviation.jsc.nasa.gov/old-alphabet.html.
In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. Dam Busters film: A apple, G George, J Johnny,
L leather, M mother, N nuts, P popsy, Z zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

>There is no TYPE-ACCEPTANCE requirement for ham equipment.

Before someone else jumps all over me, let me note that
the ONLY type acceptance that is applicable for ham equipment
is for Linear amplifiers for under 144 MHz. Even at that,
once such a unit is purchased by a ham, the ham
can modify it as he chooses. SEE part 97.315/317.

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and attempt to bring them together. Step one is acknowledging that there is a middle ground. In the CW debate, the middle ground most frequently mentioned seems to be that even if CW is less relevant today, there should not be any elimination of CW testing, unless there is an increase in difficulty for the theory elements. What I propose here may not be a perfect answer, but it does seem to address both concerns.

Current test requirements for General and Extra require the passage of a CW test at 13 wpm and 20 wpm respectfully. In both cases the CW test is a stand alone, pass (70% correct) fail requirement. But what if we offered test takers the opportunity to take the test elements as they do today OR, as an option, we let them take the 13 wpm or 20 wpm CW test as an integral part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a passing score of 70%, they would be granted an CSCE and then take the theory test as before. However, if they failed the CW test, they would be permitted to merge the CW test results from that day's test with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and

one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I haven't shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn't issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn't attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets concerns of a great many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,
3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

You can tell this radio cop he's all wet.

Amateurs can use any equipment on their own frequencies, from
home made equipment to store bought and anything modified
as long as the transmissions are within required limits of power,
harmonic suppresion, etc.

What is often confusing to these self appointed radio cops is
that, YES, commercially sold amateur gear requires an FCC
certificatio, BUT after it is bought, a ham can modify it any
way s/he chooses without breaking any laws. Additionally,
a ham can use radio equipment designed and sold for other
radio services without any problems as long as the transmissiion
is legal per my other comment above.

There is no TYPE-ACCEPTANCE requirement for ham equipment.

Look over past issues of QST, CQ and other ham magazines and you'll
find hundreds of conversion articles of equipment that was
designed and sold for non-ham use, but was modified by hams
for ham band use. That's a long standing tradition of ham
homebrewers. After WW-2, thousands of governemnt
militarry radios were modified on those terms. That preceeded
TYPE-ACCEPTANCE rules, but, as above, TYPE-ACCEPTANCE
is not a requirement forequipment used by hams.

So we have noticed. Unfortunately, the size of the small minority is ever increasing. In the UK and other civilized countries, there is legislation to prohibit the dissemination of material "likely to incite racial hatred", for example.

In the USA, because of the First Amendment, anything goes in the name of "freedom of speech"! (Listen to the output of WWCR some time!)

>I would be interested to know which HRO store this gent was talking about...

>From time to time, we hear of rudeness at HRO, AES and other ham-oriented
>businesses. I have to wonder what sort of attitude the customer went in
>with, to provoke such comments. Every time I have visited the Anaheim
>store, it has been a pleasure.

Let's not get carried away. This is a regional thing. The LA basin is
probably THE 220 capital of the world. Everytime I've been there with my
Standard C228A there's more activity on 220 than 2 meters. And more
intelligent activity too. It seems to me that every ham in LA with any sense
or money vacated 2 meters for the higher bands long ago.
This isn't the case in most of the rest of the U.S. 220 is dead, dead, dead
almost everywhere else I've been including here, Portland, Oregon. So its
no wonder the people at the PDX HRO try to steer folks away from 220.
Especially since they have less and less to offer these days. Why? The
only market for 220 ham gear is in the U.S. and the U.S. hams don't buy much.
That probably also explains why 220 radios are about $100 more than their
2 meter cousins.
This may be a good or bad thing, depending on your point of view. You don't
need a closed access repeater on a band that nobody uses. On the other hand,
if you like to chat with folks outside of your own little clique...

-

The following appeared in the Cape Cod Times and I thought I would share it with you.

Readers should feel free to cut out the following excerpts from their workbook and tape it to their refrigerator to serve as a handy reminder.

I N S T R U C T I O N S F O R T H E L A D Y O F T H E H O U S E

Have dinner ready. Plan ahead, even the night before, to have a delicious meal on time. This is a way of letting him know that you have been thinking about him and are concerned about his needs. Most men are hungry when they come home and the prospect of a good meal is part of the warm welcome needed.

Prepare yourself. Take 15 minutes to rest so that you'll be refreshed when he arrives. Touch up your makeup, put a ribbon in your hair and be fresh looking. He has just been with a lot of workweary people. Be a little gay and a little more interesting. His boring day may need a lift.

Clear away the clutter. Make one last trip through the main part of the house just before your husband arrives, gathering up school books, toys, paper, etc. Then run a dust cloth over the tables. Your husband will feel he has reached a haven of rest and order, and it will also give you a lift.

Prepare the children. Take a few minutes to wash the children's hands and faces (if they are small). Comb their hair, and if necessary change their clothes. They are little treasures and he would like to see them playing apart.

Minimize all noise. At the time of his arrival, eliminate all noise of the washer, dryer, dishwasher, or vacuum. Try to encourage the chilclren to be quiet. Be happy to see him. Greet him with a warm smile and be glad to see him.

Some don'ts. Don't greet him with problems or complaints. Don't complain if he's late for dinner. Make him comfortable. Have him lean back in a comfortable chair or suggest he lie down in the bedroom. Have a cool or warm drink ready for him. Arrange his pillow and offer to take off his shoes. Speak in a low, soft, soothing and pleasant voice. Allow him to relax and unwind.

Listen to him. You may have a dozen things to tell him, but the moment of his arrival is not the time. Let him talk first.

>amateur operations. And to "Paul", I'd suggest *he's* the one who needs
>to read and understand 97.505. A VE *has no choice* with regard to waivers,
>if the paperwork is in order, he *must* accept it.
>
>Gary

Well Gary if you are a VE you should resign immediately.... why 97.505
explains what is acceptable and must be allowed, no where in 97.505
specifically as in the whole of part 97 does it say that a VE because
he personally believes a waiver to be fraudulant cannot deny a waiver.

Show me.... show me, cite it, go on, do it VE dummies where in part
97 does it deny the right of a VE to deny a waiver if he believes it
to be an abuse?

[snip]

I have essentially stopped going to RS. There was a local store where a friend from the local radio club worked, but he was first transferred, then canned, for poor numbers.

The next time I went into his former store, I was looking for a pre-wired plug to go from a DC power supply to an HT. The kid working there was only half listening to what I said, so I walked out. Went home and found an extra charger and plug, and diked off the transformer end.

Fortunately, we do have an independent electronics store in town.

>> I wonder if any of you have been having the same problem.

Nope. I get QST and several other magazines each month. Once in a while a piece of mail will be mangled, but overall I'm happy the way things are. Several years ago I had trouble each month with one particular magazine, IEEE Computer. I ended up speaking with folks at the IEEE and my local post office. The IEEE people said that the printer was sending bundles of magazines sorted by destination to the post office and that mine was either the top or bottom magazine in a bundle and more likely to be damaged. They said eventually someone else would be added to the list and my copy would hopefully move further inside the bundle. They also sent a complaint to the printer for forwarding to the sending post office to ask them to be more careful and had me do the same with my post office (complaint form in triplicate). Eventually the problem resolved itself. I think I even got a response from the postmaster saying they were investigating my complaint.

>73's
>Bill
>N2YTE

Bill,

Don't know of any other mods for the HTX-212 except the MARS/CAP and
out-of-band RX mod described in the manual. However, RS has a new version of
the 212 called the HTX-242 on sale for $299 that has 40 memories plus call,
and it will store out-of-band freq in memory (I think).

Yes, I'm quite happy with the HTX-212 for what I paid for it. Sure gets MUCH
less intermod then my Alinco HT's

what I would like to know is that if I converted a busness band radio
to 2m would it be wrong.
<<
No. If you are licensed to operate in that ham band, and if the radio you are operating does not have excessive out-of-band radiations... you are fine. This is what ham radio is about... you can even build your own radio out of duct tape and tin foil, as long as your radiations are within legal limits.

However, OUTSIDE of the ham bands, radios are often required to be type certified, and if you modify a radio (of any sort) to transmit on (for example) the aircraft bands, OPERATING that radio would be illegal even if you had a license to transmit there, unless you got your homebrew type certified (which would cost more than a new radio).

KEY ISSUES REVIEWED IN THE FAQ (in order of appearance)

* DSO INDUSTRY TRENDS (Whats happening in DSO technology this year?)
* DSO FORM FACTORS (What types of DSOs are there?)
* PRIMARY DSO FUNCTIONS (What can DSOs actually do?)
* COMPARISONS (How can I best compare various models)
* APPLICATIONS (What are the most common DSO applications?)
* ADCs (What speed do I really need on each channel?)
* BANDWIDTH & TRIGGER (What numbers and functions are right?)
* ARCHIVAL & MEMORY (How fast, how deep, and can I get more?)
* DISPLAYS (What am I really looking at?)
* MEASUREMENTS (How much is my signal changing over time?)
* DIGITAL SIGNAL PROCESSING (How can I obtain more useful information?)
* DEMOS & PURCHASING (How can I see and get the DSO I really need?)

IF... you want the complete version

From: Bill Meara <w.meara@codetel.net.do>
Message-ID: <4kg5k0$b1u@server2.codetel.net.do>
Source record: 227975

David; I too like my HTX-202, but mine has developed an annoying problem. It can no longer transmit in the high power mode. The power out stays at the same low power level in both the switch positions. Does anyone have any info on this problem, or any ideas on what might be causing the condition? It is not antenna related - I've experimented with a variety of antennas and the thing worked fine for many months with the ruber duck. Nor is it a power input thing - problem persists with a 5 amp regulated supply. I tried cleaning the switch contacts - no improvement. For a while the problem was intermittent... Thanks

5089. ? 6m in Italy

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-10 00:00:00 UTC
From: guenter.koellner@oen.siemens.DE
Message-ID: <316C18A6@SmtpGate.Oen1.Oen.Siemens.De>
Source record: 227978

Hello, especially italian OMs,

I will come to italy for holidays at the beginning of september. As there will be some free time I will try to do some work where there has never been time or possibility at home. I will prefer either 2m SSB or 6m DX.

50MHz would be more interesting. I know italian restrictions to 50.1525 +/-6kHz. Is this still true and to be considered?

Am I as a holder of CEPT licence class 1 allowed to use the 6m band in italy?

Who can help me to answer this question or help me to find somebody who is? Thanks a lot in advance!

Source record: 227980

I also had my copy (ies) of QST damaged from the mail, but my was in the form of ripped back covers. Well I e-mailed ARRL, then I called the post office and spoke to the postmaster and told of him of my problem, along with the type of damage I was receiving. When the replacement copy of QST arrived it had no suffered no damage, which was great! So far it has waterfalled to other trade magazines I receive, they have been in better condition sinced I called. Maybe this is not possible since you are dealing wiht a APO but it might work for others.

Following this thread, it seems that more people have had rotton experiences with Radio Shack than have had good experiences.

I remember when the shack first opened up in my home town as a child. They had some very neat products and kits that really helped me to learn electronics.

But of the 4 or 5 local radio shacks here in the Eugene, Oregon area, most of them are staffed by twits. There is a very good manager at one local one, but he is the exception rather than the rule. I used to live in another state for several years and found only two salespeople there who seemed to know what they were talking about. They worked for the shack for a couple of years and then left. I've never seen good knowledgeable salespeople since.

Though to be fair, along in this thread there was a report of Radio Shack hiring hams and letting them put their call sign on the name tags. If this is true, then they should begin to promote that they are looking for electronic hobbiests for sales. This might start to clean up their current poor reputation.

Alas, you have joined the ranks of the rural folks like me who must do
node-hopping to get to a DX-cluster and accept seeing the spots up to
10 minutes later than everybody else. From here in Bear Gap, about 70
miles north of Harrisburg, I either hop via Danville to Hazelton then
link to W3IQS in Scranton, or go via Danville to Williamsport, thence
via Elmira north to Rochester where another nice cluster operates. Good
luck... =Vic=

From: Eric@mail.advertisnet.com
Message-ID: <4kgchf$ot5@news.starnet.net>
Source record: 227984

Hi guys,
I'm not real sure if this is the right place to do this, I'm a newbie on the Inet, but also a ham. From past experiences, fellow hams have always been real helpful. Anyway, my point, I just set up my reader and wanted to know if everything was working ok. Could I get a few responses? It would be greatly appreciated...
Also, I realize it's probably an over-posted subject, but I have a few comments about the no-code stuff... I got my license primarily for 2m packet. I have enjoyed it alot. But, I wasn't forced to learn code to get this, obviously. Well, since I've started, July '95, I've watched my father contact people from all over the world with seemingly simple equipment. This tells me that CW would be very reliable in case of emergencies, or limited resources. That gave me an incentive to try to learn it. I'm now studying, when I get the chance. Basically, I don't agree when people say there is no place for CW. Even though I am a young ham, I can see the need for practice and use of CW. Also, this is a hobby. In my opinion, a hobby is something someone does for enjoyment, or to "get away" from the real world for a little while. Why not take your hobby as far as you can. Learning CW doesn't mean you have to drop everything else, just adding to your knowledge of the hobby...

73's de KB0TKU...

5096. Mail Mangled QST

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-10 00:00:00 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9604101320.AA00869@tix.timeplex.com>
Source record: 227985

I receive the QST along with many other magazines (Time,
Newsweek, Discover etc.) and for years they arrive just fine. The
problem is the postal facility. In fact the one time that a QST did get mangled about 7 or 8 years ago was when it was in a wrapper. I don't know of
any magazine that is mailed these days that is sent any other way than
bare bones. Complain to the post facility that is handling the mail. It's
probably happening near the end point of delivery. Also the brown wrappers
can't be used anymore because of automation. The issues are sent out bar
coded with the zip code plus 4 adress to qualify for a bulk rate reduction
to the sender (the League). The bar coding has to be printed on a white area
of the magazine for recognition by OCR sorting equipment. Also, the post
office bulk sorting eqipment tends to tear things off, like paper wrappers, then
there goes the address. The elimination of the plastic wrapper that was used
last was probably a cost cutting move. However, the only way to protect the
magazine from the abuse described, is to put in one of those over night
shipper type boxes.

Well said, Beth, especially the last sentence. That's what self-policing means, we're each supposed to individually police *ourselves* in our amateur operations. And to "Paul", I'd suggest *he's* the one who needs to read and understand 97.505. A VE *has no choice* with regard to waivers, if the paperwork is in order, he *must* accept it.

>QST always had such protection (in the old days, QST was mailed in a
>brown paper wrapper). Is the League in such sad financial state that it
>is forced to cut pennies?

I've only had one badly mutiliated magazine from the ARRL, that was
a copy of QEX, which never has used a shipping wrapper. The ARRL quickly
replaced it. My QSTs seem to arrive as intact as my other magazines,
which also don't use wrappers anymore. Occasionally there'll be a
tattered corner, but usually they're Ok.

The trend away from wrappers is based on three different reasons. The
first is cost, of course. Plastic bags have recently gone up 50% in
cost, and brown paper has doubled in price. When you're buying 130,000
a month, that can amount to real money. The second is that the Post Office
hates the plastic bags, they hang up in their automatic sorting machines,
which can not only shred that magazine, but the 200 behind it too before
the machine can be stopped, and they've discouraged their use by mass mailers.
And the third reason is to please the eco-nazis who want to avoid plastic
because it's made from oil and winds up in landfills, and who want to save
trees to rot upright (or burn in wildfires) rather than being cut down and
made into useful things such as wrappers. (The eco-nazis love every living
thing except humans.)

Darryl, lots of things could be wrong other than what you suggest.
I don't know what anyone would do with an SASE with your address
on it other than send something to you. Here's a few possibilities:

1. Both of the guys you want cards from are dead. Thier wives
don't QSL.

2. The mailman lost your envelopes, and they never received
them. Did you sent them Registered, and do you have a
return receipt to prove they were delivered ?

3. Maybe they are no longer interested in ham radio, and they
threw your cards in the trash. No laws in the state of
California that make QSL'ing mandatory, least not yet.

4. Maybe they are like me, and they pile QSL's up someplace
and answer them once a year.

Next time, before you start giving names and calls of people
who don't QSL and accusing them of stealing your stamps,
consider the above.

The other thing I can't figure out is why the hell you would be calling people on the phone in California, when you could pick up the microphone and work about 300 other stations in California on any given day. California and Idaho are not exactly rare DX, and you don't have to wait for the next DX'pedition to work them again.

QSL's are, regardless of what you have been told, not a required part of the hobby. If you are working on WAS or another award, I suggest you work two or three stations in every state/zone/whatever you need and that will increase your chances of getting the cards you want.

If you are new to the hobby, please realize that some hams are not the least bit interesting in sending or receiving QSL cards. Don't expect one from everyone you talk to.

That KiloCycleKop is wrong. You can convert equipment from any
other service to the amateur service without getting any sort
of "type acceptance".

I would caution you that the "type acceptance" for the original
service would now be void, and it could no longer be used in
that service, except in the most dire (protection of life)
circumstances. (And even then might be called into question!)

Convert away, my friend, with no fear of a visit from the FCC.

I contacted the FCC about a month ago and was told this. If Dad was
an Extra that kept his Tech callsign, the child can get the callsign
it he is a Tech or higher. If Dad has a Extra class callsign, then
Jr. can't get the call unless he/she upgrades. Actually, Techs and
Generals have the same class callsign. I do agree that it will
probably be a long time before the first gate opens.

When I conducted VE tests, our team preamble specifically prohibited examinees from using this method. The code requirement is designed to test the ability to copy BY EAR, unless some disability prevents doing so.

Plus, copying down dots and dashes is a lousy way to learn Morse -- it is a language of sound, not dots & dashes.

You've got net access, just drop them Email for replacement copies, worked for me. I'd prefer getting my copies pristine too (and most of mine still come that way), but 130,000 wrappers a month isn't pocket change (and wrapper prices recently increased sharply). Maybe the ARRL should offer QST in baggies for an extra charge for those of you having problems with your mail. I'd prefer to avoid another dues increase myself.

It is the 26th Olympiad of the modern era I think. As to which one to
choose, that's up to you. As a side note, if you're thinking of having
special QSL cards printed, don't forget you can't use the words "Olympics"
or "Atlanta 96" or the 5 rings on your card. ACOG will sue you.

And a reminder, Delta is still offering low fares *out* of Atlanta
during the Olympics. Me, I want the hardhat concession for the venues,
if any are still standing when the Games begin. :-)

Does anyone know if a newsgroup exist where HDTV issues are discussed?

If not, I figured our amateur radio newsgroup would be the best place to post a technical question about the impending HDTV broadcasting changeover...So here it goes....

The projected cost figures of the HDTVs are extremely high compared to current TVs. I suspect the majority of american families will be unable to come up money for the HDTVs.

Since HDTV transmissions will be incompatible with the current NTSC transmissions, is it possible and likely that TV accessory manufacturers will come up with an economical convertor box to convert HDTV transmissions into NTSC signals, so that HDTV broadcasts can be viewd by regular NTSC TVs?

Your comments on the topic are appreciated. Please email your response to pmzone@clearlight.com. Thank-you

My FT-708R was not bought with a Yaesu tone deck, and I'm not sure there even was an "official" Yaesu tone deck at that time. Mine has a Communications Specialists deck in it, and it's programmed with dip switches. I'm fairly sure that any tone deck that went into that radio had to be manually programmed, and could not be programmed via the keypad.

It was the BBC which banned it ... not the Government. It was sold openly in the shops and reached Number One in the UK Top Twenty almost immediately. Get your facts right. By the way, the same BBC is now proposing to carry the Sex Pistols' "come-back concert" in Finsbury Park live on national Radio One! How things have changed in 20 years ... the Pistols are not anarchists any more (sob) ... they've turned into nasty capitalists!

>I was most
>perturbed to find that even young people thought that
>this ban was preferable to tolerating someone's slam at
>the monarchy.

Not true. We thought nothing of the kind. I was a "young person" in those days (well, relatively speaking ...) and I was the Sex Pistols' number 1 fan! (I still have the yellow T-shirt from the "Never Mind the Bollocks" tour in 1977 - pity it no longer fits me!)

>They would rather be ruled this way, and
>I would not. Good thing they are not living here in
>the USA, and I must admit that living in their culture
>was a learning experience for me even though their
>attempts at indoctrination were failures.

What? We were too right-wing for you, even in the Socialist 70's? If you think British people are "ruled" by the Queen, it shows how little you know. Did you learn *nothing* during your stay in this country? And incidentally, who paid your University fees whilst you were here?

>As far as WWCR is concerned, I have no idea what you
>are talking about. WWCR is a rather straight-laced
>organization like the Christian Science Monitor.

You have obviously not listened to its programmes for any length of time.

>I should be able to do my own thing wether or not you
>find it to be in poor taste as long as I do not cause
>harm to others.

Ah ... the truth is out! You are an anarchist, not a leftist. "No laws", "Anti-government", "Black Flag" and all that rubbish. Thank you, and goodnight!

: I don't blame the kid, with hams like KH2D around.

: Hang in there Nate, this old fart will be dead by the time you hit 40.

Charlie boy, the basic plan for this newsgroup is:

1. Read
2. Think
3. Type

You left out most of step one, and all of step two. But we'll be nice
and give you another try. Read what the kid and his buddy popgun
write. Then read what other hams respond with. If you look hard,
(well hard for you, probably) you will see that a lot of people
have wasted a lot of keyboard time on these two jerks trying to
explain the good parts about ham radio. If anyone sends them anything
that makes sense, they don't respond. If anyone sends them anything
argumentative, they blast away. Neither one of them are interested
in ham radio, they are both just interested in seeing how much
shit they can stir up in this newsgroup. I'm not wasting any more
of my time trying to explain the hobby to them, since you are such
a nice guy, you have my permission to take over the task.
That is, if you are a ham. I assume your name is Charlie from the
address of your message, but you were so busy with step 3 you forgot
to sign it......

West Valley Amateur Radio Association
Meeting Announcement

Time/Date: 7:30PM, Wednesday, April 17, 1996
Location: Cambrian School District Offices, 4115 Jacksol Dr, San Jose
Topic: Amateur Television (ATV)
Speakers: Glen Lokke Jr KE6NBO and Glen Lokke Sr K6GNG

The next meeting of the West Valley Amateur Radio Association (WVARA) will be Wednesday, April 17, 1996 at 7:30PM at the Cambrian School District Offices (4115 Jacksol Dr) in South San Jose, near Los Gatos and the interchange of Highways 17 and 85. (More directions below.)

The subject of the April WVARA meeting will be Amateur Television (ATV). The guest speakers will be ATV enthusiasts Glen Lokke Jr KE6NBO, Glen Lokke Sr K6GNG and several other ATV users. Glen K6GNG and friends will give their parts of the presentation via a live ATV video link to the meeting room. This is a fairly normal procedure for ATV users but should be nothing less than exciting to those who have not seen ATV before.

Visitors and guests are always welcome to attend WVARA meetings. We hope you'll consider joining.

Additional information about the WVARA and the meeting are available during the WVARA's weekly Nets, Tuesday nights at 8:30PM on the W6PIY VHF repeaters (frequencies listed below.) Visitors are welcome to check in with their name, callsign and city during the guest check-in portion of the Net, to let us know they're listening and to share any messages with the other participants of the net. Visitors with questions should add, "with a question", when they initially check in. Net control will come back to all the requests in order after check-ins are done.

Directions to the Meeting Location

FROM HIGHWAY 85: exit at Bascom Ave. Take Bascom northbound. Turn right at the first light, Woodard Rd. Then turn right at the second stop sign, Jacksol Dr. The Cambrian School District Offices will be on the right in 1-1/2 blocks. The Board Room is in the back.

FROM HIGHWAY 17: exit at Camden Ave. Take Camden eastbound. Turn right at the second light, Bascom Ave. Then turn left at the first light, Woodard Rd. Then turn right at the second stop sign, Jacksol Dr. The Cambrian School District Offices will be on the right in 1-1/2 blocks. The Board Room is in the back.

Talk-in will be available before the meeting on any of the
association's W6PIY repeaters. (See below for frequencies.)

WVARA New Ham Classes Start on April 29

The WVARA New Ham classes, intended to help prospective new Hams to
get their Technician (no-code) or Technician Plus (with Morse Code)
license, will begin on April 29, continuing on Monday and Wednesday
evenings until June 5. An accompanying article contains more details.
You can also find more info on the World Wide Web at
http://www.kluft.com/~ikluft/ham/wvara_class/
The classes will be held in Cupertino. To sign up, send e-mail to
education@wvara.org or leave a message at 408-996-1649. Or contact
the Education Coordinator, Michael Lyon KE6MRE, at the WVARA meeting.

The New Ham classes will be taught by volunteers from the WVARA
and are intended as a free public service. However, students will
be responsible for the costs of their own textbooks and exam fees.

About the WVARA

The West Valley Amateur Radio Association is a non-profit,
educational and scientific association. It was established to
promote interest and furnish instruction in Amateur Radio.
Celebrating its 40th anniversary this year, the association welcomes
anyone of all ages, licensed or interested in Amateur Radio, to join.

The WVARA has four repeaters, though it's more than just a repeater
club. The W6PIY VHF repeaters are linked between 147.39+ PL156.7 and
223.96- PL156.7. The W6PIY UHF repeater is on the test pair 441.875+
PL88.5. (There are other repeaters at different PLs on the same test
pair.) The W6PIY 1.2GHz (microwave) repeater is on 1286.2- PL100.
All of the W6PIY repeaters are located on Good Samaritan Hospital in
South San Jose.

The WVARA meets at 7:30PM on the 3rd Wednesday of each month except
December, when the association holds a holiday party instead.
The meetings are held at the Cambrian School District Offices
Board Room in South San Jose except in the Summer months (June,
July, and August) when it is held at the Childrens Discovery
Museum's auditorium in Downtown San Jose.

An informal gathering for food usually occurs before each meeting
at 5:45PM. The location of the get-together is announced on the
weekly Net and talk-in is available on the W6PIY repeaters.

5118. Ham Radio Classes in the South Bay (2nd notice)

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-11 00:00:00 UTC
From: ikluft@thunder.sbay.org
Message-ID: <Dpp373.F96@thunder.sbay.org>
Source record: 227854
Cross-posted to: rec.radio.amateur.misc,sbay.hams,sbay.general,ba.general

PLEASE FORWARD THIS TO ANYONE INTERESTED IN GETTING A HAM RADIO LICENSE.

The West Valley Amateur Radio Association (WVARA) is presenting a FREE
Amateur Radio class in Cupertino. Anyone in the South Bay Area interested
in getting a Ham Radio license is welcome to attend.

The class will be held on Mondays and Wednesdays starting April 29th.
It will end on June 5th. The times of the class are
6:30-7:00PM Morse Code (optional)
7:00-9:00PM Theory
It will be held at Monta Vista High School in Cupertino.

About the Class

The objective of the class will be to earn your Technician license
(Morse Code not required) or your Technician Plus license (with Morse
Code.) The Technician license has VHF/UHF privileges including
repeaters and digital packet radio. In addition to those, the
Technician Plus license also has HF privileges, allowing you to talk
to Hams around the world.

Classes will be held in the computer lab at Monta Vista High School in
Cupertino. The quizzes on portions of the Ham Radio exams at each session
will be taken and graded via the Internet.

The last session of the class (June 5) will be an open-to-the-public
Ham Radio exam session. Our appreciation goes to the Sunnyvale VEC for
accepting our request to hold licensing exams at that class session.

The class is free except that we do ask that you purchase a copy of "Now
You're Talking" which will be the class text. It's available at any local
Radio Shack store, Ham Radio Outlet in Sunnyvale or Halted Specialties (HSC)
in Santa Clara.

Students will be responsible for their own exam fees whether they take
their exams at the last class session or at another VEC test session.
Exam fees in 1996 have been set by the FCC at $6.07 per test session.

By finishing the class on June 5, the students will probably all have
their licenses in time for Amateur Radio Field Day 1996 (June 22-23) even
if anyone needs to re-take an exam at a regularly-scheduled VEC session.
Field Day is a great chance to learn more about the hobby and an opportunity
to operate radios on HF and VHF. Students will be invited to participate
at the WVARA's Field Day site in the Santa Cruz Mountains.

For More Information

If you'd like to request more information or sign up for the class you can
e-mail us at
education@wvara.org
visit our Web Page
http://www.kluft.com/~ikluft/ham/wvara_class/
or call
408-996-1649 (leave message)

This class is being sponsored by the Monta Vista Radio League and the
West Valley Amateur Radio Association. The instructors will be volunteers
from the WVARA. This is provided as a public service.

You haven't kept up with the current events in NZ lately have you? What they have done recently would make Mr. Gringrich appear to be a bed mate with Karl Marx. I am not surprised that this individual would make the link between incompetent hopefuls and the abolition of Morse code testing. But I will let that pass for the moment...

Would Jones be kind enough to show us the link between these two. They are not apparent to me, and I presume a lot of others.

73 and live better digitally
Jim, VE3XJ

P.S. By the way, did the hopeful principal win her suit?

>Gary

Actually, all of my home copies have been arriving just fine. We made this move to save both the cost of wrapping and postage; we get a less expensive rate because the unwrapped magazines can be processed by automated equipment. Interestingly, the number of requests for placement copies immediately dropped substantially when we went to the wrapperless issues -- a few more damaged QSTs reported, but fewer lost in the mails. I subscribe to about a dozen magazines; none are coming wrapped anymore it seems. I have not had a damaged copy in a long time. Perhaps there is a significant difference between postal handling centers and/or local offices.

If your copy arrives damaged, contact our Circulation Department here at HQ. You can do this by phone, mail, email or in-person here at HQ. As listed on page 10 of QST, the email address for delivery/circulation contact is circulation@arrl.org.

Have a closer look at 97.315/317 - you may build (or modify) *one* of
a particular model of HF/6m amplifier per calendar year without type
acceptance. Any more than that and you do require TA.

Indeed, and precisely which organ did the examinee use to hear the dots
and dashes and write them down?

You're not trying to claim that one's ear does the translation, are you?
Most people would agree it's the brain that does so. And it would seem
to me that an intermediate step of using the hand and eyes doesn't rule
that invalid.

I believe that the "by ear" restriction is to prohibit mechanical
translating devices, not to force a particular copying protocol.

If your VE group can provide a reference to a written rule or official
opinion that says that listening to and writing down the sounds, then
transcribing them to characters later is not "reception by ear", then
please do so. Otherwise you are making up restrictions on your own
initiative, and should stop doing so. By court order, if necessary.

The trouble is these days that so many people are so inflexible
and intolerant. They waste their lives fighting 'matters of principle'
when really they just want to have their own way. Consideration
for others and self discipline and restraint have gone out of the window.
In the big scheme of things it is total futility. There is no easy answer.
Not a very nice world for our children to grow up in. There are few
good examples set - just extremes of unrestrained behaviour.

For one thing I did apologise for such bad language at the end of the posting.
I did try to state my reasons but let my rage and hatred of what Walt Davidson
had said spiral out of control.

For another thing I will not publish a retraction. I believe in everything I said.
The Internet is a free speech medium. Though maybe I shound have used my powers of
disgression.

I will not apologise to Walt Davidson who says in one article that he suggests
hitting eleven year children on the head with a heavy iron file. I do not believe
in things like this.UnfortunatelyI can no longer access that particular article
but I do have a copy of it at home if anyone
wants it via e-mail. Perhaps I will even post it here. Then you might understand what I
ahve said better.

I think for Walt Davidson to say such things so soon after Dunblane was in very bad taste, in very bad circumstances and not appropriate to this newsgroup which is about THE serious subject of radio hams.

Fine, take me to court, complain to the postmaster, do anything you want to.

But there is no excuse as to someone saying that he wants to hit eleven year old children on the head with a heavy iron file so soon after Dunbalne where 15 children were shot dead along with their teacher and 5 or 6 others were maimed.

I stand by what I said.

If you can't see why I was offended at Walt Davidson's posting about hitting eleven year old children with a heavy iron file then go and ask the mothers and fathers of the Dunblane children who were shot dead in their gym by a madman and see what they have to say. Go and ask them what they have to say about middle-aged men wanting to exact physical danger on young children.

See what they say about Walt Davidson's comments.

If you don't agree with me and my disgust at Walt Davidson's posting of his remarks so soon after Dunblane then maybe you think that the Dunblane massacre should have happened.

You must be the only person in England who thinks this then. I know the mothers of the Dunblane children don't.

So I put it to Walt Davidson. Do you think the Dunblane massacre should have happened and if not why
post an article saying you want to hit precocious eleven year old children on the head witha heavy iron file.

I do apologise for the language I used. I'm a fairly shy, quiet field-mouse type of a person.

But even I let my emotions cloud my judgment when I hear about innocent children being murdered for absolutely no reason at all and then read the comments of some lunatic saying he
wants to bring harm to some children through a hard blow to the head with a heavy object.

I will finish this argument with a thought provoking comment to all the people who have replied to
this subject both in this newsgroup and through e-mail.

After I posted my earlier article someone from the US someone e-mailed me saying 'Dude - perhaps you've never heard of black humour'.

In Britain we take a very stricter view towards gun-related violence amongst other things. Perhaps that's why the police have opted for cs gas instead of handguns for protection.

But in the US the laws are very realxed and the death rate is far higher there for gun deaths of any sort.

Perhaps that is why less and less British tourists are going to places like Florida, Detroit and
California in general than a few years ago simply because of the violence.

What happened at Dunblane was felt by mothers, children, teachers, schoolchildren, fathers and
anyone with a good heart and hefty conscience alike.

Or do you want the UK to become like the US where children freely roam the high school with guns and
actually shoot one another in an argument?

The choice is up to you.

>Radio and The Internet is all about..
>
Tell me David Husband,

I agree that you have to tolerate other people'e position and views, but
do you have to put up with someone saying that they want to hit children over
the head with a heavy iron file (which is what Walt Davidson said in a newsgroup)
especially so soon after the Dunblane tradegy?

>I can't help noticing that people who are afraid of revealing their
>identities are very often abusive...
>
>Go and have a lie down in a darkened room for an hour or so and you will
>soon feel better.... !!
>
Perhaps you could also tell Walt Davidson to go and admit himself to a psychiatric hospital
in the process too and get his problem for hitting small children with heavy iron
bars sorted.

>Thanks.

5135. What about ham husbands?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-11 00:00:00 UTC
From: Monty Wilson <mwilson@bangate.compaq.com>
Message-ID: <DppMnK.Hx4@twisto.eng.hou.compaq.com>
Source record: 227871

I changed all the masculine articles to feminine, and
added an introductory paragraph to suggest that this is
the '90s and this kind of behavior is for special occasions
only, and made a couple of other minor changes (like most
men don't wear makeup, etc.) to remind us that we should
occasionally do these things for our wives, though it is no
longer cool to expect them to go above and beyond like this
every day for their men.

----------begin quote-----------
In these days of two-working-parent families, neither party is
expected anymore to serve the other at all times. However, it
can make a person feel special if occasionally he comes home
to a spouse that has prepared the evening just so. Now and
then, when she arrives after you, a little pampering is a nice
change of pace for her.

Have dinner ready. Plan ahead, even the night before, to have a
delicious meal on time. This is a way of letting her know that
you have been thinking about her and are concerned about her
needs. Most women are hungry when they come home and the prospect
of a good meal is part of the warm welcome needed.

Prepare yourself. Take 15 minutes to rest so that you'll be
refreshed when she arrives. Look at yourself in the mirror.
She has just been with a lot of workweary people. Be a little
gay and a little more interesting. Her boring day may need a lift.

Clear away the clutter. Make one last trip through the main
part of the house just before your wife arrives, gathering up
school books, toys, paper, etc. Then run a dust cloth over the
tables. Your wife will feel she has reached a haven of rest
and order, and it will also give you a lift.

Prepare the children. Take a few minutes to wash the children's
hands and faces (if they are small). Comb their hair, and if
necessary change their clothes. They are little treasures and she
would like to see them playing the part.

Minimize all noise. At the time of her arrival, eliminate all
noise of the washer, dryer, dishwasher, or vacuum. Try to
encourage the children to be quiet. Be happy to see her. Greet
her with a warm smile and be glad to see her.

Some don'ts. Don't greet her with problems or complaints. Don't
complain if she's late for dinner. Make her comfortable. Have her

lean back in a comfortable chair or suggest she lie down in the bedroom. Have a cool or warm drink ready for her. Speak in a low, soft, soothing and pleasant voice. Allow her to relax and unwind.

Listen to her. You may have a dozen things to tell her, but the moment of her arrival is not the time. Let her talk first.
----------end quote----------

PS: after the rest of the house has gone to sleep, put on the headphones, get on 30m CW, and work three new countries. :-)

I think your point is well taken. This is a hobby and many of us take it too seriously. As far as I am concerned, as long as you passed your exam, you should be free to pursue whatever does or does not interest you, which of course, includes CW.

I do believe, however, like most old-timers that we should not relax the standard for admission to our fraternity too much. Needless to say this is a very controversial subject. I personally would be in favor of limited HF access (assuming international rules permitted such) without demonstrating morse proficiency. I believe that those who can demonstrate this proficiency, however, should be the only ones to hold higher class licenses..such as advanced or extra..

just my opinion, please go light on the flames!

I made a 3-el quad for 6m when I lived in Dallas. It looked like a box kite turned on its side. I worked several countries on it, with a Yaesu transverter (single 6146) running about 30W keydown.

Then I got lazy with my tree pruning and, one windstormy day, a branch turned by beautiful antenna back to the dowels, u-bolts, and telephone wire whence it came. I was sad.

Someday I'd like to make another. I still have Bill Orr's book which I used to make the 6m antenna. He did not give the dimensions but his calculations were easy to follow.

5141. GB2RS News 14th April 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-11 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <829276550snx@llondel.demon.co.uk>
Source record: 227877
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 14th of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with a request for information. RSGB Headquarters is compiling a 1997 calendar of events. Would organisers of all rallies and other events who have already fixed their dates for 1997 please phone Marcia Brimson at RSGB HQ as soon as possible. The number is 01707 659015 and the deadline for inclusion in the listing is this coming Tuesday, the 16th of April.

There are two new RSGB QSL Bureau Sub-Managers. For the G0S series, Mr E J Otty, G4XRL, has taken over duties as Sub-Manager; whilst for the new G0X series of callsigns, Frank Stanbridge, G3PZS, has been appointed as QSL Bureau Sub-Manager. The addresses of both G4XRL and G3PZS are correct in the RSGB Call Book.

We have received a report on the work of radio amateurs involved in the oil "clean-up" operation following the grounding of the Sea Empress. Forty-three amateurs who are members of Pembrokeshire Raynet, North Dyfed Raynet, the Carmarthen Amateur Radio Society Emergency Team and other radio clubs throughout West Wales took part in three weeks of work providing communications along the 30-mile stretch of coastline. The Dyfed Oil Pollution Officer, Barry Evans, GW0TVY, called out the amateurs when it was realised that the existing VHF communications and Cellphone network did not completely cover the area affected.

RSGB Headquarters at Potters Bar will be open next Saturday, the 20th of April, between 10.00 am and 4.00 pm. The bookshop and GB3RS shack will be available to visitors, as will the National Amateur Radio Museum and Library. Morse tests are also available on demand between 11.00 am and 12.30 pm but don't forget to bring two passport-size photographs and the appropriate fee with you.

The Annual General Meeting of the Worked All Britain Awards Group will be held at the Drayton Manor Rally on the 12th of May. WAB members wishing to make nominations for the committee or proposals for the agenda should do so on forms which can be obtained from the secretary Mr J R Thornnley, G1NUS, whose address is correct in the RSGB Call Book. The forms must be returned by the 27th of April.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Ascension Island, N6TJ is planning activity as ZD8Z from Tuesday the 16th of April until Wednesday the 24th. Look for him around 14160kHz at 2000UTC.

From Gibraltar, G3RFX is signing ZB2FX from now until the 1st of May.

And from the Isle of Skye, which counts as EU-008 for the RSGB Islands on the Air Awards, the Dengie Hundred Amateur Radio Society plans activity as "GM0UTT Portable" from the 14th to 18th of April. Activity will be on all bands from 160 to 6 metres with two or three HF stations operating simultaneously.

Next the Rally News:

The Launceston Amateur Radio Rally takes place at Launceston College today, Sunday the 14th of April. The event features traders, a bring and buy stand, an RSGB bookstall and membership information stand and Morse tests on demand. Doors open at 10.30am and talk-in will be on 2 metres channel S22.

The Bury Radio Society Rally takes place on the ground floor of the Castle Leisure Centre, Bolton Street in Bury today, Sunday the 14th. Talk-in is on 2 metres channel S22.

Also today, the 14th, the Lincolnshire "AMS 96" Computer and Electronics Show takes place at the Springfields Exhibition Centre, Springfields Gardens, Camelgate, Spalding in Lincolnshire. Doors open at 10.00 am.

The Cambridgeshire Repeater Group Annual Rally takes place at Philips Telecom Catering Centre, St Andrew's Road, in Cambridge today;

And the Swansea Amateur Radio Society Rally also takes place today, the 14th of April, at the Swansea Leisure Centre on the Mumbles coast road. Doors open at 10.30am and talk-in is on 2 metres channel S22.

Next Sunday, the 21st of April, the White Rose Amateur Radio Society Rally takes place at Leeds University Conference Centre. The event features traders, a bring and buy stand, an RSGB bookstall and membership information stand and Morse tests on demand. Doors open at 11.00am or 10.15am for disabled visitors and further information may be obtained from Allen, G7ELS, on 0973 189276.

Also on the 21st there will be a Microwave Round Table at the Rutherford Appleton Laboratory in Chilton, near Didcot, Oxfordshire. The event features comprehensive test equipment to 24 Gigahertz and above, lectures, a discussion meeting, and a bring and buy stand. There will be no commercial dealers. Doors open at 10.00am. For further information call Geoff Grayer, G3NAQ, on 01488 638792 during the evening.

The Lough Erne Amateur Radio Club rally takes place in the Killyhelvin Hotel in Enniskillen on Sunday the 21st. Doors open at 12 noon and for further details you may call 01365 327133.

And finally the Dunkerque Rally takes place in the Kursaal, Dunkerque, next Sunday the 21st. The location is convenient for visitors from

France, Belgium, the Netherlands and Germany, and is easily accessible by car from Calais. The event features many European amateur radio dealers. Doors open at 10.00am and further details may be obtained from Michael Moulin, F1PBZ, on 00 33 139 312800.

The Amateur Radio Caravan and Camping Club's next rally will be in the New Forest, over the May Day Bank Holiday period from the 2nd to 7th of May. There is no trading at ARCC rallies, but any amateur wishing to attend as a caravanner or tent camper is invited to send an SAE for details and a booking form. These must be returned at least one week before the event. Write to the membership secretary, Alan Gard, G4LWA, whose address is correct in the RSGB Call Book, or telephone 01462 811208.

Now news of a special event station:

GB60BBC will be in use from Barry, South Wales, this weekend, from Friday the 12th of April until the end of Sunday the 14th of April. The station celebrates 60 years of television broadcasting and is operated by members of the BBC's Ariel Radio Group. Operation will be on HF, VHF and UHF, and it is hoped to include Amateur TV.

The Bristol Channel 2 metre repeater, GB3BC, which operates on channel R6, returned to service at the end of March. It had been off the air for about two months due to receiver and transmitter problems.

Now for the HF contest news:

The "His Majesty the King of Spain Contest" is taking place this weekend, the 13th and 14th of April, for 24 hours from 1800 UTC Saturday. Separate CW and SSB contests run concurrently. Brief rules are on page 21 of the April RadCom.

The third of five sessions in the RSGB Slow Speed Cumulative Contest takes place on Wednesday evening, the 17th of April, from 1900 until 2030 UTC. Send CW no faster than 12 words per minute - and never faster than the other station is sending - between 3540 and 3580 kHz. Novices are particularly encouraged to take part. The fourth session is on Thursday the 25th of April. The rules are in last September's RadCom.

The European Sprint SSB Contest takes place next Saturday the 20th of April. Brief rules are on page 21 of the April RadCom.

The Holyland DX CW and SSB Contest takes place next weekend, the 20th and 21st of April. Brief rules are on page 21 of the April RadCom.

And the RSGB Low Power Fixed Station contest takes place on 80 and 40 metres next Sunday, the 21st, from 0700 to 1100 UTC. The rules are in last September's RadCom.

Next some VHF contest news:

The third and final session in the RSGB 144MHz SSB Fixed Station Cumulative Contest takes place on Thursday the 18th of April, from 1900

until 2100 UTC. The rules are in last September's RadCom.

And now the solar factual data compiled by Neil Clarke, G0CAS.

The period from the 1st to the 7th of April saw solar activity at very low levels and the geomagnetic field also at "very low" levels. Sunspot numbers declined from 14 on the 1st, until by the 5th the solar disc became spotless. The mean was 7. Solar flux levels increased from 68 units on the 1st, to 71 units on the 2nd and the 3rd. By the 7th, levels had declined to 68 again and the average was 70 units. One small and insignificant B class solar flare took place late on the 4th. Electron fluence levels declined to moderate levels from the 3rd. X-Ray flux levels increased very slightly on the 5th in response to the flare the previous day and averaged A1.1 units. The 90-day solar flux average on the 7th was 71 units, one unit down on last week.

Geomagnetic activity was at "quiet" levels all week except for the 4th, when the Ap index was 11 units. Activity was down to "very quiet" levels on the 2nd, 6th and the 7th with an Ap index of 3. The average of Ap 5 is the lowest for some time.

The following data covers the 26th of March to the 1st of April: the aa indices, as supplied by the British Geological Survey, were mostly at "unsettled" levels. The 29th and 30th were the quietest days, with only 11 nanoTeslas on both days. The average was 16 nanoTeslas, which is K1. Solar wind speed and particle densities were average. Since the 3rd of April, the G.O.E.S.9 satellite became the primary satellite for X-Ray flux, particle flux and satellite magnetometer data for the Space Environment Laboratory at Boulder, Colorado. Bartel's rotation number 2222 starts tomorrow, the 15th.

I'll repeat the figures: spots - 7, flux - 70, Ap - 5, X-Ray flux - A1.1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 5.8MHz. This is for the 29th to the 31st of April, a shorter period than normal, due to the Easter holidays. The darkness hour lows increased from 3MHz to 3.2MHz and averaged 3.1MHz. The daytime highs took place at 1400 and the darkness hour lows took place between 0200 and 0500 hours.

I'll repeat the figures: highs - 5.8MHz, lows - 3.1MHz.

And lastly the solar forecast:

This week solar activity is expected to continue at very low levels. Later in the week the slightly more active side of the sun will be rotating into view. Solar flux levels are expected to be about the 70 mark but may increase slightly towards next weekend. Geomagnetic activity is expected to be mostly "unsettled", but with some days up to "active" levels. Ionospheric MUFs for the south during daylight hours

are expected to be about 17MHz and the darkness hour lows about 11MHz. Levels for the north will be down by 2 to 3 MHz. The April Lyrid meteor shower starts today but is not expected to peak till the 21st to the 23rd of April.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Bravo and M1 Alfa Alfa series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Echo Whiskey series.

>
I have been getting most QST in same condition as before. Since APO mail
must go through more handling, and if a large percentage of APO mail is
being damaged, perhaps ARRL could be persuaded to wrap and mail QST to
APO addresses separately.

For many hams, RS is the only local answer. Even in LA, there are few independent electronics or ham stores.

One answer to the problem with the unknowledgable salespeople at RS, is to research things yourself. Actually, there are few retail outlets any more where the salespeople know anything about the product they sell. Do your homework!

5147. Re: What about 220Mhz?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-11 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanDppH5F.EMo@netcom.com>
Source record: 227883

Jim Garver (jgarver@ichips.intel.com) wrote:

: Let's not get carried away. This is a regional thing. The LA basin is
: probably THE 220 capital of the world. Everytime I've been there with my
: Standard C228A there's more activity on 220 than 2 meters. And more
: intelligent activity too. It seems to me that every ham in LA with any sense
: or money vacated 2 meters for the higher bands long ago.
: This isn't the case in most of the rest of the U.S. 220 is dead, dead, dead
: almost everywhere else I've been including here, Portland, Oregon. So its
: no wonder the people at the PDX HRO try to steer folks away from 220.
: Especially since they have less and less to offer these days. Why? The
: only market for 220 ham gear is in the U.S. and the U.S. hams don't buy much.
: That probably also explains why 220 radios are about $100 more than their
: 2 meter cousins.
: This may be a good or bad thing, depending on your point of view. You don't
: need a closed access repeater on a band that nobody uses. On the other hand,
: if you like to chat with folks outside of your own little clique...

Well, the original complaint was about HRO salespeople at the Portland HRO store. If they do not stock 220 gear because there is little or no activity in the local area, that is a good business decision. However, all they need to do is state the facts; no need to be rude about it. And, if someone really wants 220 gear, they should be directed to another HRO store for mailorder.

You are correct about 220 activity in the LA area. Two meters has so many repeaters that multiple coordination is a fact of life. Most of the 440 repeaters are closed or private. There is even some repeater activity on 900 MHz, and 1.2 GHz is up and coming.

>N7DTD

Bob, KG7WC writes, in response:
>>I think your point is well taken. This is a hobby and many of us
>>take it too seriously.

I believe your point is badly taken. Amateur radio is DEFINED as
a technical hobby in Part 97.1, and is the reason we were once
able to justify our frequencies, as implied in the FCC Docket
for Incentive Licensing (see QST, April 1966, p. 26). If FCC
wishes to officially declare a personal radio or Citizens-Band
type service, it is free to do so. FCC says we're a technical
hobby and will remain that way. Yet they continue to ease
requirements into the Service. The Amateur Service, unable to
grasp this set of conflicting statements and circumstances,
thus understandably finds itself confused....and always on
the defensive when it comes to commercial interests who
wish to peck away at our frequency allocations.

Meanwhile, as we've deregulated, we've lost frequency allocation
(see Amateur Radio Spectrum Protection Act). Keeping our
frequencies is indeed a serious issue. And amateurs should
do all they can to find out what they need to do to keep them.
That means finding out from FCC/ARRL in no-nonsense fashion if
the Service yet needs to justify its frequency allocation as
a technical hobby, or if citizens have a Constitutional right
to these frequencies, free of government intervention.

>>I do believe, however, like most old-timers that we should not
>>relax the standard for admission to our fraternity too much.

How much is too much? Who decides? How does that affect our
future as a technical hobby? How does that affect our frequency
allocations? One is either going to maintain standards, or lose
them. Inventing the grey areas is what creates the weaknesses
in the infrastructure.

>Needless to say this is a very controversial subject.

There is not too much controversy involved, other than if
Amateur Radio should officially become a personal radio service
in de-facto fashion. It appears that if FCC/ARRL had officially
declared a new purpose and scope for amateur radio, amateurs
would have gone along. The backlash from amateurs on the easing
of requirements has come because deregulation has come in

de-facto (unofficial) fashion. And the various national organizations around the country are sitting and waiting, for what, no one knows. That's one fact every IARU society in the world now understands. So they'll be watching to see if those running the show in the States can handle the responsibility of addressing the issue.

Regards,
Vince, WB2EZG

ARLD019 DX news

ZCZC AE61
QST de W1AW
DX Bulletin 19 ARLD019
From ARRL Headquarters
Newington CT April 11, 1996
To all radio amateurs

SB DX ARL ARLD019
ARLD019 DX news

This week's bulletin was made possible with info provided by Chris, G4BUE, John, WD8MGQ, Jean Michel, F6AJA, Yuki, JH1NBN, Mauro, I1JQJ, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

SEYCHELLES ISLAND, S79. Gerard, F2JD/5R8EN, is on this island for a week or two, though does not currently have a rig. If a radio can be secured, he will activate S79JD.

REUNION ISLAND. After his stay on Seychelles while returning to Malagasy, Gerard, F2JD/5R8EN, will visit Reunion and may operate FR/F2JD.

KERMADEC ISLANDS, ZL8. Ron, ZL2TT, reports a 40,000 QSO goal for the May 4 to 14 operation of ZL8RI. Thats 4,000 QSO's per day. QSL via ZL2HU.

CUTE CALL DEPARTMENT. CT4UW and others will sign CQ2U from Gibalta Lighthouse April 12, 13 and 14.

GALAPAGOS ISLANDS, HC8. DF1VU, DL4VCG and DK5VP will be active April 21 to May 10 signing their home calls/HC8. They will run 700 watts on 40 through 10 meters while power is available, mainly between 1400 and 1800z. Battery operation may be possible at other times to allow them to run perhaps 50 watts. QSL via home calls.

SARDINIA, IS0. Marconi station IY0GA will be QRV April 19, 20 and 21 to coincide with International Marconi Day, April 20. HF, VHF, UHF and satellite operations are planned. QSL via IS0JMA.

ANTARCTICA, KC4. Valentin, RU1ZC, will begin a three month tour and operate as R1ANZ in July. QSL via RU1ZC.

LEBANON, OD. F5PWJ will be active until September 30 as OD/F5PWJ. He operates both CW and SSB. QSL via F5PRR.

GREENLAND, OX. Terry, G3WUX, will be be part of the Trans-Greenland Expedition July 10 to August 25 and will operate 14002 kHz CW and 14200 kHz SSB running 5 watts to a Windom antenna as OX/G3WUX/P. QSL via G3WUX.

TUNISIA, 3V. Last chance to work 3V8BB by OK1TN, OK1GB and OK2ZZ, as they QRT April 12. Check 1825, 3505, 7005, 14005, 21005 and 28005 kHz for CW and 1855, 3795, 7055, 14155, 21155 and 28155 kHz for SSB. QSL via OK1TN.

VIETNAM, 3W. 3W5RS has been quite active lately, often on 40 meters. QSL direct.

YEMEN, 7O. Paul, F6EXV, is seeking permission to operate, though negotiations are a tad slow. Paul remains hopeful, however.

BARBADOS, 8P. David, VE3VET, and Joe, VE3BW, will be QRV April 20 to 27 signing 8P9IJ and 8P9IK, respectively. QSL via home calls. Meanwhile, Bernd, DJ1TO, and Baerbel, DL7UTO, will be QRV April 24 to May 6 as 8P9IR and 8P9IU, respectively.

NEPAL, 9N. Mako, JA1OEM, is supposed to be on the air as 9N1HP sometime during April, though no PacketCluster spots appear on the New England network. Ditto on the 9M2QQ operation by Hans, DF5UG.

DODECANESE, SV5. Fred, SM7DAY, will sign SV5/SM7DAY/P from various islands May 25 to June 14. He plans to operate QRP on 20 and 17 meters. QSL via SM7DAY.

CAMEROON, TJ. Two Americans are QRV on all bands, CW and SSB, as TJ1GB. QSL via WA6SLO.

COCOS ISLAND, TI9. Yuki, JH1NBN, reports that a total of five operators will be active on HF as TI9X and TE9RLI on satellites from around April 27 to May 4. Frequencies mentioned include 1825, 3795, 7045, 14025, 14085, 14195, 15295 and 28395 kHz. Check for their 6 meter beacon on 50110 kHz. QSL via CBA of JH1NBN with SAE larger than 4 by 6 inches.

THIS WEEKEND ON THE RADIO. Page 109 in April QST details rules for the International HF Grid Location Contest and QRP ARCI Spring QSO Party CW, while rules for the Japan International DX Contest appear in January QST on page 105.

Hello-

Two stations I recently worked asked me to QSL to their 1994
callbook addresses, a copy of which I unfortunately do not have.

If you have a 1994 version of the International Callbook, may I
please impose upon you to look up the addresses for ud6dj and ua2ff ?

Thanks and 73,

Ron (wb8ruq).

The answer is yes to all of the above. My reason for asking
is that I was on a quest for manuals for the Tempo 2020.
I was told that there were fine ladies/gentlemen on the
list who couldhelp. Sure enough, I now have located both
a service and operators manual.

Thanks,
Russell

> VFO scarcely covered the CW portion....it sold like hot cakes.

Yes, but...

It was popular because it and its predecessor the SB-33, were one of the first affordable semi-solidstate transceivers available aimed at the mobile HF market.

The 'code adapter', if I remember correctly, was nothing more than a sinewave oscillator that fed into the audio path, generating a CW ouput.

I still wouldn't buy a transceiver that didn't cover the CW portion of the bands and didn't have a key jack - even if I never operated CW. You never know when you might need it - providing one remembers the code. ...And everyone of tech+ class or higher remembers the code. Right???

Well, without putting too fine a point on it, actually it is a character distribution of a figure that somewhat represents a human female shape.

The image that Burt fornicates with his monitor upon seeing such a representation does not seem to be so outlandish, n'est-ce pas? I am sure that Burt would agree.

5156. Need mod for IC735 noise blanker

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-11 00:00:00 UTC
From: sfritts@usit.net
Message-ID: <4kk4mu$4d7@news.usit.net>
Source record: 227892
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Is there an improvement mod for the IC735 noise blanker? If I turn the blanker up high enough to reduce the noise, the audio becomes distorted.

Thanks,

Steve, WA4GZE

Mark,
Is there any way to upgrade the 212 to a 242 like changing a chip or
can RS service dept do the mod ???
Would be really great if for a reasonable fee us 212 owners can get
the 242 "extras"...Im sure it only involves a chip replacement or
programming.
BTW I also love my HTX-212 but now I'm sorry I didn't wait for the
242 model....
Please let me know if we can get our 212's upgraded....RS and us
would both benefit.

It ain't limited to retail outlets. In my work the project on which I
am involved required a stereo jack with an internal SPDT switch. The
regional sales representative for the particular make of jacks did not
understand "SPDT". And this is supposed to be a professional!

Wrong, I always post via "post reply" and email, they go at

the same time. Bad taste has nothing to do with it. In some

groups post dont always make it in tact email almost always

does. Lets just call it diversity transmission. This is
being posted in the exact same manner (check the times in
the header).

>>Was Internet your first contact with the REAL world???

>I have had lots of contact with the real world, and the internet is
>not it.

We''ll if you followed this whole thread and walked down the
streets of some large cities or went into a bar, I would say
the the same diversity of personality types would exists,
unlike in some small town (or small countries) where almost
everyone thinks the same.

>Sad that you think it's the real world. The tone and style of
>your messages suggests to me that you need more real world face to
>face interaction with people.

No I just get fed up with self righteous people who get holier than thou for no good reason.

Look, hereis the situation; Yest the original poster probably wanted attention, thats obvious. But beyond that he is typical of so many creative people I deal with everyday. His little pirate radio transmitter has an intermittant problem. He obviously had some great vision of what he would do with it and being more creative than technical lacked the analyical ability to define what the fault really was. Because this was a deeply emotional event for him he expressed it the way he did. I hear program directors and on air radio talent do the same thing every day.

The bigots reject him more because of what he represents than what he said.

As fhe crap about 11 year olds, etc. listen to them talk some times, like wise for some people's mothers, etc. etc. What they really do like is the mental mode of the poster, in other words discrimination.

As for the excuse that it was crossposted. An FM 25 is not remotely cosidered any kind of ham gear, so regardless of where it went I still submit that they are responding to alt.pirate.radio where the post is not all that big of a problem.

<Paul who REALLY hates dumb VEs@interferon.com> wrote:

>97 does it deny the right of a VE to deny a waiver if he believes it
>to be an abuse?

I'm not a VE, but anyway... (all emphasis is mine)

97.505 Element Credit

(a) The administering VEs _MUST_ give credit as specified below
to an examinee holding any of the following documents:

(10) An unexpired (or expired but within the grace
period for renewal) FCC-granted...operator license
document, and an FCC Form 610 containing:

(i) A physician's certification stating that that
because the person is an individual with a
severe handicap, the duration of which will
extend for more than 365 days beyond the date
of the certification, the person is unable to
pass a 13 or 20 words per minute telegraphy
examination; and
(ii) A release signed by the person permitting the
disclosure to the FCC of medical information
pertaining to the person's handicap: Element
1(C).

So, in other words, if the examinee has a properly filled out waiver, the
VE _must_ (according to the letter of the act) grant credit for element
1(C). It does not say that the VE cannot note on the paperwork he or she
sends in to the VEC (and thus to the FCC) his or her suspicions (in which
case hopefully the FCC will investigate and, if warranted, revoke the
license), but it does say that if the paperwork presented to the VE is
in order, the waiver must be accepted by the VE.

Clear now?

: jlowman@netcom.com (Jim Lowman) wrote:

: >The abuse of these freedoms by a small minority is the price we
: >pay to have those freedoms.

Yes, and a small price it is that I shall willingly pay...

: So we have noticed. Unfortunately, the size of the small minority is
: ever increasing. In the UK and other civilized countries, there is
: legislation to prohibit the dissemination of material "likely to incite
: racial hatred", for example.

Sadly, such misguided efforts are not unique to the UK.
Here in the USA, there exists legislation which defines
certain acts to be known as "hate crimes" whose intent
is to protect groups (e.g. homosexuals, racial and
ethnic minorities, etc.) that tend to be hassled more
than the rest of us. All that these laws do is apply
additional penalties for those who commit "hate crimes."
They can do nothing to prevent such attrocities from
occuring in the first place.

: In the USA, because of the First Amendment, anything goes in the name of
: "freedom of speech"! (Listen to the output of WWCR some time!)

Almost. There have been a few clauses for two hundred
years for things like "fighting words," but yes, you
are correct in that people are generally allowed to
express themselves however they see fit in the US of A.

It is clear that there exist some small cultural
differences in this regard between the UK and the USA.
When I was living in Oxfordshire, your government banned
the playing of a song called "God Save the Queen" by a
punk rock group known as the Sex Pistols. I was most
perturbed to find that even young people thought that
this ban was preferable to tolerating someone's slam at
the monarchy. They would rather be ruled this way, and
I would not. Good thing they are not living here in
the USA, and I must admit that living in their culture
was a learning experience for me even though their
attempts at indoctrination were failures.

As far as WWCR is concerned, I have no idea what you
are talking about. WWCR is a rather straight-laced

organization like the Christian Science Monitor. If you want to see some racy programming, get an NTSC compatible television, and point your C-band dish to look over our way.

In any event, it is strongly my belief that legislating moral behaviour ultimately resorts in failure, and in the meantime creates resentment on the behalf of free-thinking persons, irrespective of the medium be it amateur radio, television, hate crimes, or whatever. I should be able to do my own thing wether or not you find it to be in poor taste as long as I do not cause harm to others.

Cheers -- Mark

Hello everybody,

Please, I need help...
I am interested in learning more practical and theoretical knowledge
in RF telecommunication field (point to point and point to multipoint
links in the 900 MHz band) applied to telemetry and SCADA (Supervisory
Control And Data Acquisition) applications. I would like to know more
on the following topics:
-radio waves propagation analysis;
-loss calculations;
-practical measurement of noise and efficiency of the installed links;
-equipement requirements;
-and many more...

I tried to find specific 2 to 5 days courses on this subject but I found
nothing. Even MOTOROLA seems to do not give courses like that. So
I would be very happy if somebody gives me an hint or a location
where I could find courses in RF telecommunications.

NOTE: Excuse me for these many mistakes included in this message
but I'm not fluent in English. Feel free to answer me in French
or in English.

Thank you very much for your time and patience...
Salutations

>to be an abuse?

Somehow I get the suspicion that I have just entered the pig's domain
for a little mud-wrestling. Really, though, it seems too easy:

|S 97.505 Element credit.
| (a) The administering VEs must give credit as specified below to an
| ^^^^
|examinee holding any of the following documents:
|[...]
| (10) An unexpired (or expired but within the grace period for
|renewal), FCC-granted Novice, Technician Plus (including a Technician Class
|operator license granted before February 14, 1991), General, or Advanced
|Class operator license document, and a FCC Form 610 containing:
| (i) A physician's certification stating that because the person is
|an individual with a severe handicap, the duration of which will extend for
|more than 365 days beyond the date of the certification, the person is
|unable to pass a 13 or 20 words per minute telegraphy examination; and
| (ii) A release signed by the person permitting the disclosure to the
|FCC of medical information pertaining to the person's handicap: Element
|1(C).

'Must' is probably a 4-letter word you don't use often, Paul, but it means
that there is *no choice*. The *only* decision the VE is allowed to make
is whether the documents are authentic (i.e. really signed by a
physician). Once the VE has determined that, the accountability for

fraud rests with the physician. To say it yet another way, the only "fraud" or "abuse" the VE is allowed to investigate is forgery of the required original license or the physician's certification.

The medical aspects of the decision are clearly up to the physician (otherwise, why involve a physician at all), but are subject to review by the FCC (thus requirement (ii) for release of medical information *to the FCC, NOT the VE*). How is the VE expected to make a decision on the medical merits of the exemption if he is not even to be given access to the applicant's medical records?

Sir,

It's still available. The IBM/DOS Broadcasting Radio Station Database Program for Longwave, Mediumwave, and Shortwave. Over 4,000 records included already. The program is completely read and write. Records can be added or changed. Sorts in many different formats both on your screen and printing.

If you would like a copy of the program, send your request to "chuck@flinet.com". Please include your MAILING ADDRESS. For example, your street number, city, state and zipcode. Also include your Email address.

The program will be sent to you via Email probably within 24 hours if not sooner. If you request the program and haven't received it in that period, check back with me..

Remember to send your address. Requests without a mail address will no longer be acknowledge to save time on the internet. In the past, requests without an address were reminded with a message. Usually, the reminder went unanswered anyway. If it was, the reply was sometimes very rude.

This program is free! Everything works. It has many features and they all work, not like shareware where some of the features work and others don't.

You address will be kept confidential. I will be sending you a first class letter later explaining another full featured Database program available. It's very big!

Interesting that such would come from a sniveling little socialist country like ZL. Recently (back in the USA) a high school principal (who had failed the teacher test four times) sued the school district over the test. At the trail an attorney asked her what percentage 8 was of 80....she waited 40 seconds and asked for the question to be rephrased....she then said that 8 was 1% of 80. Well, if we can have principals that can't figure 10% we can have radio ops that don't know the code......And the two are related.

I've always had problems with Tandys in Australia....as a result I would only consider buying maybe a length of solder there...if I was desperate, because you couldnt go too far wrong.

I've had problems over the years with:

Lack of TRS-80 product support ($350 for replacement keyboard $40 for TRS dos) No info or software or knowledge of the products.

Lead acid gell cells defective at purchase, refusal to refund.

Clock Radio with 60hz chip in it (50 hz standard in Australia)

I suppose what irks me most is that the people there just DONT HAVE A CLUE.

All the same I suppose they are a reasonable kids toy store.

In case no one has said what I'm about to say:

I agree - first check your own homeowner's AND auto insurance. I have had the ARRL insurance for the purpose of insuring my mobile rig, but now State Farm WILL cover 2-way radios that are BOLTED DOWN (as opposed to sitting on a seat, unbracketed). Since I have ZERO deductible on my Comprehensive for car insurance, I will recover full replacement costs should the radio be stolen. If you have a deductible, see how much it would cost you to either lower the deductible or reduce it to zero; THEN compare that to the cost of ARRL insurance WITH their $50 deductible. And remember, too, the ARRL insurance (for some reason) requires you to list ALL your ham radio equipment, even if you DON'T want to insure it. The more you list, the more you pay.

The ONLY good thing I find about the ARRL insurance is that it is basically (as I understand/recall) all-risk. Should a piece of equipment be damaged by a cause that State Farm doesn't "recognize", then you are screwed.

Is there a race of people called NNB ? If so then methinks there are
several people who could be called racist !!!!!!!!!!!!

On a serious note, ask someone who is politically aware, and who is not
British, what they think of the U.K.
If they are honest with you, you may well not like the reply.
I have been told several times by folk from all round the world that
Britain as looked at from the outside, is the closest thing there can be
to a despotic society without a despot in power ! And it makes no odds
as to what party is in power at the time. Our lives are completetly
controlled by others, with everything from enforced wearing of crash
hats on bikes (daft if you dont do it anyway, but still enforced), to
local government having the power to snatch your old mums house to pay
for her o.a.p. retirement home.

Oh, and just as a by the by, I am British, very proud of it, and would
live no where else on this earth , so make what you will of it all !!
Cheers n beers,
John

It is true that Radio Shack will let their ham radio employees put a callsign on the namebadge. I know of at least two RS employees in the Columbus area who have their call on the RS name badge. I asked my DM about this, and he said that one of the employees at a certain store will engrave your callsign into the name badge at an extra cost. Have not done that to my badge yet, but probably should. THere are a lot of hams that come into my store. I have a ham license plate, but I don't think they know it belongs to an employee. With the callsign on the namebadge they might actually realize I'm a fellow ham. The other non-ham customers would probably ask, "What's that N-8-V-J-F for?" Then I could explain to them what ham radio is...

One reason that I was hired was that I am a ham operator. I knew the manager of my local store for a few years, and told him alot about ham radio. He offered me a job, and I accepted. Since then, that manager got transferred to another store. However, I'm trying to get the new manager to earn his ham ticket.

Later,

Mark N8VJF
RS Employee, Store 01-4427, Columbus, OH

When I was finishing UCLA, I worked at a Radio Shack. To my knowledge, I was the only technical person who worked in my sales district (I was trained as an aircraft radio repair tech in the USAF).

The district manager cut me some slack because of my experience. I was able to expell obnoxious/rude/abusive customers from the store at will. Of course, I also took the opportunity to pick up on as many attractive female customers as possible.

Well, that's all.

Brian Webb, KD6NRP

Hi George, I wasn't suggesting using some other part of the
body rather than BY EAR. What other part do you have in mind?

Writing down dots and dashes is simply one additional step
in the decoding process. It's not efficient, but I don't
see anything morally wrong with it especially for handi-
capped potential hams (the original subject). Are you
actually saying that you would not allow a severely
handicapped Morse code testee to write down dots and
dashes. If so, I hope you have to walk a mile in their
shoes in your next life.

Yes! I remember it well. It was first recorded on A & M Records, but very few copies were ever released because the Pistols were "sacked for unruly behaviour" by A & M the same week and were quickly snapped up by Richard Branson's Virgin Records, who promptly re-released it and made a fortune.

>BTW Walt, the Pistols always were capitalists - it was all a Great
>Rock N Roll Swindle remember?

Indeed! That's why it was such a good scam!

>newsgroup)
>especially so soon after the Dunblane tradegy?

I think Walt's comments were made as a humourous remark; that was the
way I read them and I did not make the connection with Dunblane that you
made....

Also I see in another post of yours in this thread, that you again
connect Walt's remarks with the Dunblane tragedy. I do not think this is
the correct thing to do; I see no connection between these two
subjects...

BTW, I have 3 children, the eldest son (12 years old) lives with me and
can be very trying -- I feel sometimes that I would like to hit him over
the head with a heavy iron file -- not that I ever would, but when you
have your own children, you will understand how somebody can make that
type of comment !!

Regards..

Hello!

I am a student at ØstfoldRegional College in Norway, and I am working on a project where the goal is to develop a system that can recognise and classify whistlers. At this point I have some data from a french satellite that contains some whistlers, but I need more data to test the system. If anyone know where I can find data that contains whistlers or have any other information about this subject, please contact me.

Please direct to other relevant newsgroups also.

: Don't see or read much about the venerable QUAD antenna, lately.

: Don't see many in operation either.

: Ideas or news, anybody?

: Bill Worthington
: AA4FM/0
: Eudora, Kansas, USA

Hi Bill,
I imagaine quads are alive and well somewhere, but I guess not
two many people use them on 2 meter HT's.
My first one was 4 elements on 10 meters, mounted to a mast
with an armstrong rotor in the front yard..... I don't remeber
how many times I fell running thru the snow to turn the antenna,
but I sure remember working lots of DX with it.
Best one I ever had was a two element 40 meter quad. Couldn't
turn it as it was fixed in one direction (bit big to turn) but
it worked great.
About 4 or 5 years ago I built one (4 elements on 20 meters)
for field day, fixed at the U.S. It worked fine, but since Hawaii
is 4,000 miles closer to the U.S. mainland and in the same zone
we are here in Guam, we didn't win any awards. But we had a fun
weekend at the beach.
I don't know whatever happened to Bill Orr's book, its around
here somewhere.....

Monty Wilson (mwilson@bangate.compaq.com) wrote:
: I changed all the masculine articles to feminine, and
: added an introductory paragraph to suggest that this is
: the '90s and this kind of behavior is for special occasions
: only, and made a couple of other minor changes (like most
: men don't wear makeup, etc.) to remind us that we should
: occasionally do these things for our wives, though it is no
: longer cool to expect them to go above and beyond like this
: every day for their men.

: ----------begin quote-----------
: In these days of two-working-parent families, neither party is
: expected anymore to serve the other at all times. However, it
: can make a person feel special if occasionally he comes home
: to a spouse that has prepared the evening just so. Now and
: then, when she arrives after you, a little pampering is a nice
: change of pace for her.

: Have dinner ready. Plan ahead, even the night before, to have a
: delicious meal on time. This is a way of letting her know that
: you have been thinking about her and are concerned about her
: needs. Most women are hungry when they come home and the prospect
: of a good meal is part of the warm welcome needed.

: Prepare yourself. Take 15 minutes to rest so that you'll be
: refreshed when she arrives. Look at yourself in the mirror.
: She has just been with a lot of workweary people. Be a little
: gay and a little more interesting. Her boring day may need a lift.

: Clear away the clutter. Make one last trip through the main
: part of the house just before your wife arrives, gathering up
: school books, toys, paper, etc. Then run a dust cloth over the
: tables. Your wife will feel she has reached a haven of rest
: and order, and it will also give you a lift.

: Prepare the children. Take a few minutes to wash the children's
: hands and faces (if they are small). Comb their hair, and if
: necessary change their clothes. They are little treasures and she
: would like to see them playing the part.

: Minimize all noise. At the time of her arrival, eliminate all
: noise of the washer, dryer, dishwasher, or vacuum. Try to
: encourage the children to be quiet. Be happy to see her. Greet
: her with a warm smile and be glad to see her.

: Some don'ts. Don't greet her with problems or complaints. Don't
: complain if she's late for dinner. Make her comfortable. Have her
: lean back in a comfortable chair or suggest she lie down in the
: bedroom. Have a cool or warm drink ready for her. Speak in a low,
: soft, soothing and pleasant voice. Allow her to relax and unwind.

: Listen to her. You may have a dozen things to tell her, but the
: moment of her arrival is not the time. Let her talk first.
: ----------end quote----------

: PS: after the rest of the house has gone to sleep, put on the
: headphones, get on 30m CW, and work three new countries. :-)

We don't do basements here in Houston, Jim. If you dig a hole here, it just fills up with liquid. :-) I thought some guys might get a chuckle out of that who wouldn't know which end of a spatula to hold onto. For some reason, the behavior I stated above is much easier if you enjoy cooking, and if you're in the mood to make a good impression and give her a bit of a surprise. But as I said, for occasional use only

>to be an abuse?

Read 97.505. It says "The administering VE *must* give credit..."

There is no latitude, a VE *must* accept a properly executed
physician's certification. He can, of course, resign his VE
position if he doesn't want to comply with the regulation,
but otherwise he has *no choice* but to accept a physician's
certification. A VE has no authority to judge the validity of
a physician's certification. In fact he is not allowed access
to the medical records that would allow him to make that judgement
even if he had the proper training in medicine to do so. Only FCC
staff are allowed access to that information under the waiver of
confidentiality signed by the applicant.

The VE may voice a concern to his VEC about the possibility of
fraud in obtaining the certification if he has first hand knowledge
that would lead him to believe fraud has been committed. The VEC may
then refer that to the FCC for investigation. However, the VE must
accept the certification at face value until such time as FCC staff
determines otherwise. He has no latitude and no authority to do
otherwise, and is in fact in violation of the regulations, and
subject to personal liability, if he attempts to do otherwise.

This should all be explained in detail in your VE Handbook.

Get used to it Darryl. I have sent out almost 1.5 times as many
SAStampedEnvelopes as I have received. I doubt that those who fail to
respond are getting rich on our stamps but their inconsiderate actions
reflect on us all. I have WAS on 160-10 meters and sent SASE for
probably 90% of the contacts. I hate to think how many $$ i have sent
out over the years and will just rack it up to expense. I answer ALL
QSL's received and SASE is nice, BUT...

Seems to me, if people were so damned proud of Dad, Mom, Grandpa, Uncle Bob, Aunt Sarah, Cousin Billy or whatevers license, they would upgrade to represent the license. Bunch of whiney peckerheads. They aren't proud of anything, they just want something for nothing AGAIN.

N0RDQ who is NOT after one of them either. But for Christs sake, when does the responsibility of life and lifes little accomplishments begin to kick in for the individual. Still relying on some other person accomplishments. Sorta like waiting for the relatives to die, so one can have their money (accomplishments).

>
>Is there an improvement mod for the IC735 noise blanker? If I turn the
>blanker up high enough to reduce the noise, the audio becomes
>distorted.

That's a surprise? When a blanker blanks, it kills the desired signal
for the duration of the noise pulse as well as the noise pulse itself.
Of course that's going to generate distortion, that's inherent in
the process. The hope is that the resulting distortion is less annoying
than the noise that is removed. I believe that the time constants used
in the IC-735 blanker are as close to optimum as you can reasonably
expect in a radio of its type. You can play with the time constants,
but I don't think you can substantially improve upon them. The slice
level setting is absolutely critical for best performance on different
types of impulse noise and signals, so you need to set that carefully
on a case by case basis. If the impulses are wide or very frequent,
then you may do better leaving the blanker off because too much of
the desired signal will also be lost and the distortion will be severe.
There's no good way to handle this problem using a blanker. A noise peak
clipper may be better in these cases, but the real answer is to eliminate
the noise at the source.

I hope this doesn't sound like I'm trying to teach you to suck eggs,
you may already know all of this and still hope to improve the blanker
in the IC-735. I've had my IC-735 for 7 years and I've tried modifying
the noise blanker time constants for better operation. I wound up back
at the factory values. I don't think you can get it to work much better.
I think that if the blanker can't handle the impulses without unacceptable
distortion, you're going to have to do something else to deal with the
noise (like using an ANC-1 noise canceller).

I have no desire to gain any further technical knowledge of Ham radio. I am presently a Tech light and have no plans to upgrade. The main reason I wanted to become a ham was to gain acces to the VHF\UHF bands. I am interested in reliable communications for myself and my family. I also contribute to my community by participating in public service events and emergency preparedness. I don't feel guilty about it and I don't think anyone else should either. Remember, Ham radio is a diverse habby as well as a technical one. I think there is plenty of room for all of us.

====
Alas, that's ham radio. QSLing has been a very invloved process, and
the return rate, with even SASEs and tear-stained envelopes, never
exceeds 50-60 percent. I gave up pursuing WAS on 2 meters for that
reason, and my latest foray into 160 meters in hot pursuit of DXCC and
WAS on that band has been sad. Stateside contesters are the worst --
had a return rate of 20 percent of 50 cards sent out following a
contest last year. I gave them a contest point and an SASE, they gave
me nothing. It's very, very disappointing, to say the least, but maybe
you've hit on something -- shame them in public. Nah. It's just a
waste of bandspace. The hobby has enough positive aspects to simply
write off -- well, almost -- the turkeys who take your stamp and use
it to mail a letter of their own. The world's a mean place, hi...

To all radio amateurs

SB SPCL ARL ARLX010
ARLX010 GA call STA

FCC okays special Olympics call signs for Georgia

Hams operating within the state of Georgia may use special call signs from April 15 until August 31, 1996, to commemorate the 1996 Olympics, under a Special Temporary Authority issued by the FCC.

Here's how it works: An FCC-licensed radio amateur operating in Georgia with a ''4'' in his or her call sign may replace that number with ''96'' (representing the year) or ''26'' (commemorating the 26th Olympiad) during the period of the STA. Hams with any number in their call signs and operating within the State of Georgia may add ''00'' to the existing number (to mark the centennial year of the Olympic Games).

For example, WA4BKD in Georgia also could identify as WA96BKD, WA26BKD or WA400BKD, while NG3K, when operating in Georgia, could identify only as NG300K or as NG3K.

The Olympics start in July. The STA stemmed from an initiative by James Altman, N4UCK, of Atlanta and the Georgia Amateur Radio Operators Group he organized, with the support of ARRL.

Joseph F. Haefner, WD8PSX, SK

Joe Haefner, WD8PSX, who served as Michigan s Official Observer coordinator for the past three years, died unexpectedly April 11, 1996. He was 71. Joe lived in Garden City, Michigan, and was an active member of the Garden City Amateur Radio Club.

Michigan Section Manager Dale Williams, WA8EFK, said Joe s passing ''leaves a gap in the section'' that will be hard to fill. ''He did a marvelous job,'' he said. ''He was very conscientious.''

A wife and daughter survive. Arrangements are incomplete at this time.

To all radio amateurs

SB PROP ARL ARLP015
ARLP015 Propagation de KT7H

The Sun is spotless. There have been no visible sunspots for six of the past seven days, and the average solar flux is a point lower than last week. As mentioned in ARLP014, we should be at the beginning of the sunspot minimum, and the solar flux minimum should occur later this year.

The last propagation bulletin had a confusing error which mentioned both 158 and 192 as the solar flux for April, 1999. Actually 192 is the projected average solar flux for April, 2000.

This month the geomagnetic field should stay stable, but April 17 and 18 could bring a recurring moderate disturbance. The solar flux should rise above 70 by April 18 through 24, and go back below 70 after May 3.

Sunspot Numbers for April 4 through 10 were 11, 0, 0, 0, 0, 0 and 0, with a mean of 1.6. 10.7 cm flux was 70.2, 69.9, 68.7, 68.4, 68.4, 69 and 68.8, with a mean of 69.1.

Ham radio has part in National Musical Arts event

Amateur Radio will play a role at a musical and historical event April 12-14 at the National Academy of Sciences in Washington, DC. Special event station W3A starts operation at 0000 April 13 and continues for the next 48 hours. Run by members of the Potomac Valley Radio Club, W3A plans to operate approximately 47 kHz up from band edges.

The event is in conjunction with National Musical Arts end-of-the-season concert, ''Radio and Music,'' set for April 14. The concert commemorates the 95th anniversary of Gugliemo Marconi's first transatlantic radio transmission and the 70th anniversary of NBC. The musical program includes the work ''Radio Music,'' by John Cage, as well as compositions by Paul Schonfield and Peter Schickele, otherwise known as P.D.Q. Bach.

Leonard Schachter, N3RPQ, has loaned part of his vintage radio collection for the presentation of ''Radio Music,'' to be performed by Schickele, Nobel laureate Joseph H. Taylor Jr and National Academy of Sciences President Bruce M. Alberts.

Frank Turano, KA3GAL, will display Marconi memorabilia, including a magnetic detector, spark transmitter, receiver and telegraph key.

Representatives of the ARRL will host an informational Amateur Radio exhibit during the event.

The manual for the radio states the belt hook is the HEAT SINK! To run at high power at extended times without it is to invite problems. Even on battery at extended talk times it gets pretty warm.

I have 3, am perfectly happy with them all, even the one that I bought because the guy dropped it in a flood, and soaked it with muddy water.

Opening it up, spraying out with electro-wash and resetting it, and it is like new. There is a little rust stain on the display though.

One thing I have maintained for years, if you are going to use a radio for mobile, buy a Mobile radio, don't use a handheld. I am probably in the minority, but I consider a handheld the last purchase unless you are big into camping, hiking or public service. A mobile with a slide in mount to use as a base is a much better solution for most hams than a handheld.

Gary mentioned the SBE-34 that "sold like hot cakes". I dunno about
that... I mean, just how many would that be? Hundreds (maybe) thousands..
not likely...

Besides .... if it was such a dar n good idea, how come the manufacturer
"Side Band Engineers" is no longer in business ... AND ... why haven't the
larger and conceivably smarter and more market-savy manufacturers picked
up on the idea?

Lastly, think about the Japanese ham market and the big three Japanese
ham equipment vendors. The 1,000,000 plus "operator" license holders
in Japan include approximately 92% of whom are "CODELESS" hams. At the
same time, only around 500,000 hams have ever bothered to apply for and
receive the separate "STATION" license (with callsigns). Now ... wouldn't
ya think that the CW capability would NOT be a necessity? Yet, there you
have it ... gzillions of radios complete with built it CW keyers, narrow
CW filters, etc .....

Me thinks the Japanese manufacturers are a pretty savvy bunch.
Cheers, Sandy WA6BXH/7J1ABV
slay@netcom.com

That is a good idea, although the first purchase for our newly-licensed no-coders at the local club is usually an HT, as they are less expensive and more versatile, in general.

Perhaps the manufacturers should put a finer point on the heat issue in the manuals. Since cigarette-lighter cables are sold so widely for mobile operation, as opposed to use for charging, the average ham, especially the newcomers, probably would not think of the heat generated when mobile and transmitting for long periods of time. It is more apparent when you have the HT in your hand during battery operation.

A while ago, someone on here referred to an HT as "a specialists tool" and that went right over my head. Seems like everyone at the club has at least one.

: : Ideas or news, anybody?

They are still around; no idea why we do not see more of them.

I have been over to Cubex in Brea, CA, about a 45-minute drive from here. They make some fine quads, both for HF and VHF. Pretty sure they advertise in a couple of the ham magazines. Their 2m, 4-element "Yellowjacket" model was selling like crazy at the Southwestern Division Convention last year.

At that same convention, there was a talk on quads vs. yagis by an advocate of using quads. I missed it, due to being at another presentation, but my wife shared her notes and handouts.

Have RFI problem from my Icom 735 radio and 20 meter dipole in attic.

My and my neighbors Stereo equipment and her sound system on her computer
are the biggest problems

My stereo has signals that are loud. I tried putting LC filters in the speaker
leads, no dice, disconnected them and still have loud signals. My theory is
it is the line (110v). When I raise the volume, the interference gets a bit lower and
audio comes in over the interference, but the interference does not increase in
volume with the volume control with headphones only hooked up to stereo.
My Computers sound system also has noise.

My antenna is in the attic with many 110 v power wires. I also get interference
to my computer sound system and the stereo itis hooked to.

Could RFI be getting into my line ???? Can I put toroids into all the AC lines ???
What are the typical cures for this ??? Is there a book on RFI, ie., like the
Antenna book or handbook ??? Any other tests to try to diagnose the problem ???

Please help, I am really excited about having the time to get on HF now...

Mike WB2TBQ

Jim, KH2D asked:

>Does anyone have any historical data on the phenonemom of MODS?

Basically it goes back to the roots of the hobby. Obviously the first decades included only homebrewed equipment, which is the ultimate in "MODS".

Later, as "factory made" equipment came into availability, hams still thought they could improve the factory efforts (and in many cases can) so the tradition of "MODS" continues.

Also, the habit has strong roots in the modification of surplus military and commercial equipment to operate in the amateur bands.

Hans K0HB (71111.260@CompuServe.COM) wrote:

: For a brief period (1953-1968) there was no "incentive
: licensing", so Generals had access to all portions of all
: bands. In 1968 incentive licensing returned in essentially
: it's present form, in which the Generals remain on 20 and
: 75 except for the portions reserved for Advanced and Extra.

That was a nice historical perspective, Hans.

Since we are on the subject, can you help to jog my memory a bit?

I was first licensed as a Novice in 1966, and got my General later
that year. Along came incentive licensing, and I got my Advanced
in 1968. Missed several good opportunities to upgrade to Extra
over the years, so now I am hustling to finish reading the ARRL
theory manual before the question pool changes in July.

I am sure that someone must had advanced the idea of grandfathering
the existing Generals to Extra, since we were using all the amateur
frequencies already. What were the arguments against that idea?

I remember only being so outraged that I quit ARRL, and only recently
rejoined last year, a 27-year lapse.

Thanks in advance and 73 de Jim - KF6CR

Thanks to everyone who replied or posted about ARRL insurance.
It sounds great. All replies from experienced people were positive;
besides the followups posted, I got two messages by e-mail from people
who had processed claims with no trouble.

My family is holding a two-day family reunion in Winter Park this summer. My brother and I want to be able to communicate as we drive into the area and spend the week-end there. Are there any 440 or 2 meter repeaters that cover Winter Park AND Denver? Is this a friendly repeater, i.e. does it welcome visitors? If so, please provide the frequency and PL, if any. If there is no repeater that covers both areas, is there one which covers Winter Park? Please reply via e-mail. Thanks. Gerry WA6E (Sacramento).

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 APRIL AND FORECAST FOR 14 APRIL - 16 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 12 Apr
Daily Proton Fluence >1 MeV: 2.4E+06
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 4.9E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Apr 15 Apr 16 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 12 Apr
Learmonth 8 2222 3222
Fredericksburg 6 18
Planetary 7 24

Observed Kp for 12 Apr: 4555 4323

2B. MAGNETIC FORECAST
Date Ap Conditions
14 Apr 10 Quiet to unsettled
15 Apr 10 Quiet to unsettled
16 Apr 15 Unsettled to active

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
13 Apr Normal Normal Fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
14 Apr Normal Normal Normal
15 Apr Normal Normal Normal
16 Apr Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
13 Apr 4

Observed Australian Regional MUFs:
Darwin: Not available.
Townsville: Near predicted monthly values, with 15%
depressed 02-04UT.
Hobart: 15% depressed in the first half UT day, otherwise
near predicted monthly values.
Sydney: Near predicted monthly values.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
14 Apr 5 near predicted monthly values
15 Apr 10 near predicted monthly values
16 Apr 10 near predicted monthly values

I just feel that there is PLENTY of space for everyone to enjoy our hobby
>and no one person should be excluded for ANY reason, including wether or not they want
>to learn an old and outdated form of communication.
>Ted F.
>N3SQY

Absolutely!

And we should buy them a Radio as soon as they fill out the form that
requests their name and address (unless they are unable and then we must
provide a suitable proxy to fill out the form for them) . And the rest of us
should form Community assistants to erect a tower and antenna at the sight of
their chosing. After all, we all are ENTITLED, aren't we?

Roger KD6CC

5242. Re: Does the test involve any practical work?

> Also I see in another post of yours in this thread, that you again
> connect Walt's remarks with the Dunblane tragedy. I do not think this
> is the correct thing to do; I see no connection between these two
> subjects...

Quite. It takes a good 3 or 4 blows with an iron file whereas the
Dunblane guy had it sussed in a single shot. :))))

Seriously guys, carp about senseless violence (and the dunblane
proof that Britain is equally as bad as the States) elsewhere and leave
these chapters for 'Amateur Radio'

Michael Fitzpatrick.

5243. Re: Radio Shack: You got blank stares? Try hiring the knowledgable

I think Brian is correct. How can any VE group make up their own
arbitrary restrictions? On the other side of the coin, a person will
probably never become code proficient with this limited copy technique.

Every CDE/Telex rotor book I have seen has a way to check if the 8
wires to the rotor are properly connected on the tower. You use a VOM
or VTVM.

Sounds like either a wire or perhaps the resistor in the rotor motor
is bad.

You can get it repared for a flat $75 at HY-gain/Telex even if an
older CDE.

Quads are still popular..several Atlanta area hams have just put up multi el quads and Bill at Antenna Mart stays busy selling his quads.

Too many fables about quads not staying up have cut the number of commercial mag articles I guess.

5249. Olympic Calls to be on the air

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-13 00:00:00 UTC
From: thompson@atl.mindspring.com
Message-ID: <4kncia$1c20@mule2.mindspring.com>
Source record: 227759

Even though there may be no official olympic stations, the Georgia Amateur Radio Operators Group (N4UCK =leader) has gotten FCC approval to use special calls. For example WA4QRS may sign WA96QRS for the 96 games, or WA26QRS for 26th olympaid, or WA00QRS for centennial year for the modern olympics.

Georgia hams can use these call from April 15 to August 31, 1996.

Look for me as K96JRB or AA00OP (olympic program) among others.

I started out in CB a while back and decided to go get my Novice Licence so I could 'get away from' 11 meters. 10 meters was real exciting at first but my interest began to fade. It just wasnt exciting anymore to make a contact.

I have decided to go take my Tech test before the Novice expires. I would liek to know or know where I can find more information on the capabilities of 2 meter radios. I have heard alot autopatches and repeaters on 2 meters. Can I really use a 2 meter handheld like a cellular phone and call up a friend from the woods?

I would also like to knwo what goes on on 2 meters?, is it just alot of casual conversation, or are there contests?

Please send any available inforation on the uses of the 2 meter Ham Band to

One thing I have maintained for years, if you are going to use a radio
for mobile, buy a Mobile radio, don't use a handheld. I am probably in
the minority, but I consider a handheld the last purchase unless...
<<
Well, uh, yes, if you know what you want. However, a lot of new
hams (myself included) want something inexpensive to get them on
the air, so they can see if they even like the hobby. Investing $500+
in a mobile unit (and a power supply for home use) is a lot of money.

The 202 gave me the most bang for the buck... and by using it I learned
that I wanted more... and am in the market for a mobile... but I might
have
learned that I did not like the hobby, and then I would have been stuck
with less debt.

Further, a mobile does not work very well as a handheld, but an HT
does work as a mobile.

I agree. If there are loopholes in the regulations that let you get away with that, so be it.

But the purpose of having the code is to communicate with it. Some of us still do! I like to carry on conversations on CW ... he transmits to me, I transmit to him, etc, often in the ranges of 30 WPM or so. You can't do that by translating the characters after you've written them on a paper.

I'm not asking for a discussion on whether or not we should have a code requirement. I'm just commenting on the purpose for the rules as they stand now.

If you want a rugged 2m ham bands only HT with *excellent* IMD performance,
go for it. You won't find anything better currently sold into the amateur
market. If you want a scanner, or a Gameboy, it's not for you. There is only
one outstanding problem with the set, there is a birdie on 146.76 MHz. That's
a harmonic of the colorburst crystal used in the TT pad.

Gee, I must say that the person going into Radio Shack for technical
advice has to be the one without a clue. That's not why they're there.
Radio Shack is a convienence store. Do you expect gourmet recipes from
the checkout clerk at your 7-11 too?

Treat doing business at Radio Shack like you would doing business
with any other Quickie Mart . Go in, grab what you want off the shelf,
pay the checkout clerk, and leave. Simple.

I've had very little trouble with Radio Shack clerks. They generally
know how to work the register and how to make change. I really don't
expect anything else from them, so I'm rarely disappointed.

answering the previous question Jeff (jeff@com) wrote:

: I wouldn't recommend that ANY Ham interconnect Packet with the Internet!
: The two systems can be quite incompatible with respect to potential
: commercial
: traffic as well as the likelihood of frequently colorful language....
: If you want to get on packet, go packet. If you want the 'Net, log-on.

Thats the same as saying that voice repeaters should not interconnect to
the public telephone networks. You could run into the same problems.

There are quite a number of packet gateway stations with internet
connections. By using the telnet application the amateur station can
require a password to allow an internet amateur to use any of the rf
equipment. Signing on as guest only allows you to read the messages etc,
on the amateur bbs. You must send e-mail to each sysop to use their rf
stations.

Tired of node hopping in your local area? Telnet to an other state and
see whats out there! http://www.ccnet.com/~rwilkins/gateways.html

Have Fun!

>
>Gary mentioned the SBE-34 that "sold like hot cakes". I dunno about
>that... I mean, just how many would that be? Hundreds (maybe) thousands..
>not likely...

Thousands at least from the serial number ranges I've seen. The SBE-33
and SBE-34 were hot for the same reason the IC-706 and DX70 are hot.
They offered a very compact mobile radio that performed adequately on
SSB when the competition was offering behemoths geared mostly to CW,
with AM and perhaps SSB thrown in as afterthoughts, IE Vikings, HT37
etc. Their only real competition was from Galaxy, which while it offered
a key jack, didn't have narrow filters even as an option. And the Galaxy
was much larger, tube type, and much more power hungry.

>Besides .... if it was such a dar n good idea, how come the manufacturer
>"Side Band Engineers" is no longer in business ... AND ... why haven't the
>larger and conceivably smarter and more market-savy manufacturers picked
>up on the idea?

They're gone for the same reason the Code Kings such as Hallicrafters,
Johnson, National, Hammurlund, etc are gone, Incentive Licensing killed
them by stunting the market growth on which they depended. (The Japanese
survived because their base home market wasn't similarly stunted.) And
that large and savvy manufacturer MFJ has picked up on the idea with their
SSB only 20m rig, and Heath offered a series of SSB only monobander
kits which were popular.

>Lastly, think about the Japanese ham market and the big three Japanese
>ham equipment vendors. The 1,000,000 plus "operator" license holders
>in Japan include approximately 92% of whom are "CODELESS" hams. At the
>same time, only around 500,000 hams have ever bothered to apply for and
>receive the separate "STATION" license (with callsigns). Now ... wouldn't
>ya think that the CW capability would NOT be a necessity? Yet, there you
>have it ... gzillions of radios complete with built it CW keyers, narrow
>CW filters, etc .....

The "key" jack is practically free, doubles as PTT for some other modes,
and the keyer is free, just some extra firmware filling unused space in
the microprocessor's ROM. The narrow filters are useful for other modes,
RTTY and data, so aren't wasted on the non-Morse operator, etc. The Japanese
manufacturers take the "kitchen sink" approach, loading their radios with
all sorts of mostly useless gee-gaws, even to including Gameboy-like features
and scanning on some of their radios. I'll bet half the owners of some of
these radios don't even know what some of the features on their radios *do*.

I'll be darned if I know what Yaesu's AQS is supposed to do, but there it is, proudly taking up panel space. It probably was demanded in some market niche somewhere.

The bulk of Japanese operators are limited to 10 watts too, yet most of the equipment we see from Japan runs more power. How come? Because the Japanese design their radios for the world market, adding and subtracting features to tailor them to each domestic demand. Anything that doesn't cost anything to leave in, is left in for every market, even if no one in that market has any real use for it. As long as any, even tiny, market niche demands CW, it'll be left in most Japanese radios since it's more trouble to delete it than leave it in.

Manufacturers who cater only to one market don't have to do that, which is why MFJ doesn't have CW on its SSB monobander, why Heath offered a series of SSB only monobander kits, and why SBE sold SSB only transceivers. And it's why CW operators curse the IC706, because even though it has a key jack, it clips dits and is practically unusable for CW. Yet it has become the largest selling HF rig Icom has ever introduced. If CW performance were still important, Icom would have taken the pains to make the keying work correctly, or the IC706 wouldn't be selling well. But they didn't, and it is, which speaks volumes about the relative importance assigned to CW capability.

>Thanks!

Probably not. The power increase is insignificant for on air operation,
and the heatsink and PA devices aren't designed to handle the increased
stress.

Bumping up to 150 watts would only represent a 1.76 db increase in
signal strength, and that's barely perceptable on HF. The rule of thumb
is that if you can't increase power by 10 db, it probably isn't worth
doing. So the next step up from 100 watts should be 1000 watts if
you want a worthwhile improvement in signal.

>repeaters on 2 meters. Can I really use a 2 meter handheld like a
>cellular phone and call up a friend from the woods?

Well sort of, autopatch lets you make calls, but they're generally
half-duplex rather than full duplex like cellular, so you and your
friends will have to get used to taking turns talking. That won't
be hard for you since you're used to that in amateur radio, but
it may be hard for your non-amateur friends to understand. Also
unlike cellular, while you'll be able to make calls, you generally
won't be able to be called, IE the patches generally don't operate
in reverse.

There are many many 2m radios on the market, most of them are
pretty good. There are some exceptions. The worst feature of
many current radios is that they are subject to IMD and overload,
so you get a lot of pager crud and other interference. This is
largely because they try to double as wideband scanners as well
as being communications radios. The two uses place contradictory
demands on the radios. Unfortunately, most HTs fall in this
category (with the notable exception of the Radio Shack HTX202).

Unless you just *have* to have foot mobile operation, a mobile
rig is a better choice for a number of reasons. The larger radio
has room for better filters (though not all mobile rigs take
advantage of this) and allow greater standing current in the
front end (due to less concern about battery life). These two
factors can greatly improve resistance to IMD and overload.
The mobile rig will also have a far greater amount of audio,
making it easier to hear in a vehicle, will be designed to
work correctly with an external antenna (which will greatly
extend your range), and will run quite a bit more output
power (which will make listening to your signal on the repeater
more pleasant for everyone else than if you were operating with
a handie-scratchie). And lastly you can get all that for not
much more money than a good HT would cost.

>I would also like to knwo what goes on on 2 meters?, is it just alot of
>casual conversation, or are there contests?

Thankfully, there are relatively few contests on 2m, though there are
some. Most are limited to the narrowband segments using SSB and CW.
There is a lot of casual conversation, mostly via repeaters, though
there is considerable simplex operation in some areas as well. There
is also a lot of packet activity, satellite operation, foxhunting,
and the like. Some Dxing and contesting occurs in the narrowband segment,
requiring a *multimode* radio that does SSB or CW. Most 2m rigs don't
do those modes, only FM. If you are interested in that sort of activity,
then forget HTs entirely and concentrate on the multimode rigs.

And don't forget the higher bands. There is much of interest above
2m. On 70cm you'll find many of the same repeater opportunities offered
on 2m, but with a different crowd who may or may not better fit with
your personality and interests. And there's ATV on 70cm, as well as
more satellite operating, more weak signal work, and more advanced
packet operation. A dual-bander radio may be what you really want.
It'll allow you to work both 2m and 70cm. At 1.2 GHz you'll find
FM ATV, which can offer much better pictures, plus all the other
things you found on 2m and 70cm. It is less populated in many areas,
however, and you should ask around locally before making this jump.

There is so much that is interesting, challenging, and fun that
you can do on VHF/UHF that it will take you years to explore it
all. Operating through the repeaters is fun and useful, but if
that's all you do, you'll miss out on a lot.

>hams (myself included) want something inexpensive to get them on
>the air, so they can see if they even like the hobby. Investing $500+
>in a mobile unit (and a power supply for home use) is a lot of money.

Ouch, where have you been pricing mobiles? That's in the ballpark for a new *dual-bander*, but is on the very high end of the range for 2m mobile rigs. There are plenty of 2m mobile rigs very close to the price range for a good HT, and you'll be getting quite a lot more radio for the money. And don't be afraid of the used market. There are a number of very good older radios out there for $100-$150 that actually out-perform many of the newer singing and dancing Gameboy scanners that pretend to be amateur radios.

Or you can do like quite a few of us do and use a $50-$75 GE Mastr II or Motorola Mitrek for a mobile rig. They work better than any of the amateur grade radios, and for a lot less money. Of course you have to find a spot for them in the trunk, and you're limited to only a few crystal controlled channels, but how many different repeaters do you work everyday anyway?

(There are times, especially if you travel a lot, where having frequency agility is important, but I'm willing to wager that most amateurs settle down to only a very few frequencies on 2m for their everyday operating and would be quite well served by these radios. Perhaps they aren't a good *first* choice since you won't have figured out where you're going to eventually settle down yet, but they may be an excellent choice for the more settled amateur.)

>The 202 gave me the most bang for the buck... and by using it I learned
>that I wanted more... and am in the market for a mobile... but I might
>have
>learned that I did not like the hobby, and then I would have been stuck
>with less debt.

That's why your first radio probably should have been an older used radio. Most of its value is already depreciated so you can often sell it for about what you paid for it, sometimes more. And often the older radio will perform *better* than the wideband scanners masquerading as amateur radios which are sold today.

>Further, a mobile does not work very well as a handheld, but an HT
>does work as a mobile.

Well, you've got us there. :-) Though you might be surprised to
learn that some amateurs do use mobile rigs foot portable. A lot
of them today are not much bigger or heavier than the HTs of only
a few years ago, and gell cell packs are available to run them.
If you operate only on low power, the batteries last a long long
time. And you have high power if you need it. The setup fits easily
into a shoulder bag or light pack or briefcase. Actually it can be
quite a lot neater than some HT in auto installations (which are
generally horrors, and *don't* work well in that service). They
won't slip into your shirt pocket, or clip on your belt (unless
your belt is part of an Alice rig), but a mobile used foot portable
is not an absurd idea. In fact it can be quite a good idea in some
cases. A friend of mine has his setup in a backpack, complete with
a solar panel to keep the batteries charged. I have a complete 70cm
repeater in a briefcase that I've been known to carry to hamfests
and the like. It has local mike and speaker, so it can also double
as my "HT".

(I'll admit that a backpack with a solar panel and antenna sticking
out of it may look odd at the mall, but it blends right in at a hamfest.
My briefcase gets hardly any notice at all.)

>write. Then read what other hams respond with.

I've kept up with this entire thread. YOU read my posts on this thread,
apparently you haven't or you would know my point of view.

You aparently, haven't stopped to "Think" about what the original poster
had in mind. He was asking for help/encouragement, stated a blunt/true
observation, hoped to stir up HAMS to defend their hobby with
positive informative counterpoints. Only one was mustered.
All the other HAMS responded with nasty short-sighted "how dare you" replies.
Its outright shameful how some supposed Elmers, respond to new HAMS.

>If you look hard,
>(well hard for you, probably) you will see that a lot of people
>have wasted a lot of keyboard time on these two jerks trying to
>explain the good parts about ham radio.

What I have observed is a kid with a legitimate point of view asking
for feedback to encourage him. I have also observed several OLD FARTS
with a stinking attitude, you for one. Its no wonder the hobby is dying.
I have also observed one (just one) ham with a wonderful perspective.

>If anyone sends them anything that makes sense, they don't respond.

You don't agree, so it doesn't make sense. How broad-minded you are.

>If anyone sends them anything argumentative, they blast away.

He made a tough statement about his observations of HAM radio,
trying to get someone to respond and convince him HAM was worth his time.

In response, several beat the tar out of him for "daring" to say
anything bad about HAM radio. His initial observations were dead on.
Only one positive truly enlightening response was put forth, not yours.

>Neither one of them are interested
>in ham radio, they are both just interested in seeing how much
>shit they can stir up in this newsgroup. I'm not wasting any more
>of my time trying to explain the hobby to them, since you are such
>a nice guy, you have my permission to take over the task.

I think I pretty much stated my case. When the old farts, you,
die off, HAM radio will be a better place for young HAMS.

>That is, if you are a ham. I assume your name is Charlie from the
>address of your message, but you were so busy with step 3 you forgot
>to sign it......

This is the internet, not 80m (I assume thats where you hang out).
Listing call letters is an option here.I do happen to be a ham. My callsign
is KC5LWF. I'm tech+, at 10wpm, and about to get my general.

A HT may be *slightly* less expensive, but it is also less versatile,
and less suited to most communications tasks. Its only real claim to
fame is ease of carriage.

>A while ago, someone on here referred to an HT as "a specialists tool" and
>that went right over my head. Seems like everyone at the club has at least
>one.

That sounds like something I said. A HT is a specialist tool, suited
for those occasions where extreme portability and concealability are
the paramount consideration. It does not serve other uses well. Everyone
may have them, but it is like the old adage that when all you have is a
hammer, everything looks like a nail. In fact the HT is usually the
wrong tool for most jobs. The specialist chooses the right tool for
the job, the hack just wails away at every job with a hammer.

>Was there not a 20 meter sub-band for the exclusive use
>of extra class licensees? The time period was 1955-6
>and as I recall it was above 14.3 mHz.

You may be thinking of the old "Amateur Extra First Grade"
license which, through a couple of name changes, became our
current Advanced class license. Until 1951 that was the
only grade which had phone privileges on 20 and 75 meters.

In 1951 the current "Amateur Extra" class was created, and
it also had 20 and 75 meter phone access.

In 1953 20 and 75 meter phone were opened to General and
Conditional license holders.

For a brief period (1953-1968) there was no "incentive
licensing", so Generals had access to all portions of all
bands. In 1968 incentive licensing returned in essentially
it's present form, in which the Generals remain on 20 and
75 except for the portions reserved for Advanced and Extra.

To whom it may concern

Rf: Ham radio - special project - "Young students studying English through amateur radio

My name is Freund Bella and I am an English teacher in elementry school in Israel. This year we have started a new original project of teaching English through the amateur radio station 4X6EE which we have in our school. This tool of communication enables us in a unique way to practice the English language in real time. But since it's a new system - a new method of teaching English - I have to write a special textbook for the use of my students with dialogues and original subject which can be used through the Ham radio talks. Therefore I will be much obliged on any help I could get on the theoretical level as well as on the practical way. If you are willing to take apart on this matter please apply to the following address.

Bella Freund.

It has been reported on this forum more than once that about half of the QSO's currently found on the HF frequencies are CW. So, how do you reason that MF/HF CW (OOK Morse) is an obsolete mode? Is it just because you want it to be, or that economics (unique skills are expensive!) have forced its demise from some sectors to be replaced by digital gimmickry with dubious reliability? Why do we still hear commercial 500KHz stations on CW? Has the false economy been exposed? Inquiring minds want to know.

73,
Clay N4AOX

Too true John. The Crmininal Justice Act is a perfect example - an
oppressive Act proposed by one party (Conservative) and not strongly
contested by another (Labour) because they did not want to appear
soft on crime. Berlin closes off its streets each year to allow for
a huge dance music party, the UK makes the same thing illegal.
Sickening :-(

US WEST CELLULAR, a leader in the field of cellular communications, has immediate opportunities in Phoenix, AZ, for:

FIELD ENGINEER
You will be responsible for RF system design, cellular system optimization and planning, cell site equipment specification, new site evaluation and support for a market region. Cellular systems design support for coverage and capacity expansion.
Requires BSEE with 3+ years RF system design experience. MSEE preferred. Previous experience in cellular industry highly desireable.
Job: NV04-FE

CELLULAR OPTIMIZATION ENGINEER
Responsibilities include adjusting cell site parameters, fine tuning all cell site parameters, dynamic mobile and base power levels, sectored and tiered call placement to provide accurate hand-offs of mobile subscribers.
Requires ASE/ASEET (2 year degree) with 3 years cellular experience. Higher level degrees desireable.
Job: NV04-COE

NETWORK ENGINEER-SWITCH SYSTEMS
Manage the network capital budget and growth planning process, develop integrated plans/designs for switching, power and common systems to support cellular voice and data services. Excellent project management/coordination skills essential with thorough understanding of wireless communications desireable.
Requires BSEE plus 3 years experience, or 7 years equivalent experience in the telecommunications industry.
Job: NV04-NESS

NETWORK ENGINEER-TRANSPORT SYSTEMS
You will plan, design, and implement cellular network configurations and interconnections for the efficient transport of cellular voice and data traffic for the present year and up to 5 years into the future. You'll also manage the interconnect capital budget and growth planning process, optimize network configurations to minimize interconnect expense.
Requires BSEE plus 3 years experience, or 7 years equivalent experience in the telecommunications industry.
Job: NV04-NETS

Qualified candidates should submit their resume referencing Job Code to:
Hiring Manager
US West Cellular
2201 East Camelback Rd. Suite 600B
Phoenix, AZ 85016

PLEASE DO NOT APPLY IN PERSON

--OR-- you may reply with an ASCII-style resume directly to the sender of this message.

We are an Equal Opportunity/Affirmative Action employer. Employment is subject to successful completion of pre-employment drug testing and background certification.

I think that's sad, and I feel sorry for you that you would
so limit yourself. It is your loss, and your decision, of course.

> Bob, KG7WC writes, in response:
> >>I think your point is well taken. This is a hobby and many of us
> >>take it too seriously.
>
> I believe your point is badly taken. Amateur radio is DEFINED as
> a technical hobby in Part 97.1, and is the reason we were once
> able to justify our frequencies, as implied in the FCC Docket
> for Incentive Licensing (see QST, April 1966, p. 26). If FCC
> wishes to officially declare a personal radio or Citizens-Band
> type service, it is free to do so. FCC says we're a technical
> hobby and will remain that way.

Part 97.1 declares that *a* goal of the amateur service is technical
advancement, but there are other goals as well, including fostering
international goodwill (non-technical), emergency and public service
(non-technical), and increasing operator skills (IE twisting knobs,
pushing buttons and perhaps pounding a key, all non-technical in any
meaningful sense). So while *one* goal of 97.1 is of a technical nature,
the rest are not.

Now of course all amateur radio involves *radio* in one way or another,
and a radio is a technical device, but so is a blender, yet cooking isn't
considered a technical art (though it is applied chemistry). A majority
of the goals outlined for the amateur service in 97.1 are applications
of radio rather than radio technique itself, so it would seem that the
service's charter recognizes that there are non-technical aspects to
the service.

I think cutting yourself off from the technical aspects is unfortunate,
and limits you in what you can do, but on a policy level it does not
disqualify you from meeting some of the goals of the amateur service.

> Meanwhile, as we've deregulated, we've lost frequency allocation
> (see Amateur Radio Spectrum Protection Act). Keeping our
> frequencies is indeed a serious issue. And amateurs should
> do all they can to find out what they need to do to keep them.

Indeed. And there are only two spendable political currencies
that can affect that, numbers and money. Since amateur radio
cannot hope to compete financially with big business interests,
we must depend on grassroots numbers and activism to maintian
our status. We cannot hope to hold on to spectrum we do not
occupy. We must fill it or fully expect to lose it to someone
who will. If every amateur had been a 20 WPM brass pounder
when we lost 220-222 MHz, we would have still lost it unless
those amateurs were *using* 220-222 MHz at the time.

> That means finding out from FCC/ARRL in no-nonsense fashion if
> the Service yet needs to justify its frequency allocation as
> a technical hobby, or if citizens have a Constitutional right
> to these frequencies, free of government intervention.

In fact, neither and both of these positions apply. You cut things
as if there were only two either/or choices, and that only those two
particular choices are available. That's not true. *One* of the
goals of the amateur service is technical advancement of the art,
but it is only one. Not every amateur, nor every amateur activity
must be oriented to advancing the technical art. There are other
purposes to fullfill for those with less of a technical bent.
Those non-technical types, whose public service and emergency
operations have garnered good press for the service, have helped
to fullfill our charter and retain our spectrum too.

People do have a right to access spectrum under the doctrine of
the Common Heritage of Mankind, but that right is not unlimited and
the government has a legitimate reason to license and regulate it
just as they do for licensing and regulating the operation of a
vehicle on the public roadway or the operation of a boat on a public
waterway. Government is ceded the power to license and regulate our
access and activities in these commons areas as a part of the social
compact we've made to limit our right to property in these areas in
order to maintain public safety and order.

Incentive Licensing, that bastard child of 60s social engineering
activism, is illegitimate in that regard. It attempts to corrupt
the licensing process toward accomplishing other objectives than
those ceded to the government for controlling public access to
public property.

There are things a person must know to be a radio amateur, some
technical, some not, and those things are needed to be known by
all amateurs who participate in activities of like kind, IE
there is no discernable difference in kind between operation on
14.176 MHz and 14.174 MHz, so operators in both locations in the
spectrum need to know the same things, no more, no less. But
Incentive Licensing illegitimately and corruptly does not follow
that principle of objective and uniform regulation.

If the multi-class structure of amateur radio were setup like
that of other licensed and regulated activities in the public

commons areas, IE the multiple classes of driver's (and pilot's)
licensing for different types and purposes of vehicles, where
the requirements are matched to the unique skills required for
that *kind* of operation, then it would have some legitimacy.
But it is not, so it does not.

You prattle about maintaining standards, Vince, but when pressed
you really don't have a logic or rationale for what standards
are either appropriate or proper for amateurs to maintain.
You treat "requirements" as if they were grains of sand, one
is good as another as long as you have a lot of them. But
standards aren't really like that. They must each individually
have a rationale consistent with the purpose for which they are
formed. Irrelevant standards are of no value. They must have
an objective linkage to the things they purport to serve.

It has been reported that about half the vehicles on the road in
Amish country are horse drawn buggies, does that make buggies any
less obsolete as a form of commuter transportation? When you take
a group of people selected for certain beliefs and locate them in
a given area, their ways may be peculiar and anachronistic to the
rest of society. We've had selection by government fiat of CW
beliefs and skills for those granted access to HF. Is it then a
wonder that they persist in this behavior despite demonstrably
superior methods being available?

Obsolete doesn't mean extinct. Obsolete just means that there
are recognized better ways.

From: Bill Meara <w.meara@codetel.net.do>
Message-ID: <4krsn8$5ih@server2.codetel.net.do>
Source record: 227653

Sparky and group: I'm a happy HTX-202 owner. I'm even happier since I was able to fix an annoying power problem that had been bothering me for months. I couldn't get the radio to transmit in the high power mode. Tony Briggs (hero of the week!) pointed to possible bad contacts in the Hi-Lo power switch. With great trepidation I opened up the rig. (I'm used to HW-101's not HT-202's!!!) I applied a couple of drops of WD-40 (The Elixir of Life!) and some Radio Shack contact cleaner and the radio sprang back to normal operations.

You mentioned the belt clip as heat sink. I looked through my manual and could find no reference to the clip serving as a sink. Maybe they changed the manual. Can you tell me where you saw this?

Given the popularity of the HTX-202, maybe we should encourage people to post useful maintenance tips such as that provided by Tony.

Thanks, 73 Bill N2CQR/HI8

Hi
The more recent the radio, the less likely of any mod. I had a ft-530,
loved it.
It would do all it was supposed to, 130-174 tx/rx 300 rx and 400-512 tx/rx
(approx)
It would also listen to like 930 mhz.
Cant remember, its been several years.
Now I have an alinco dj 582 ht, not bad, no 800 though

Ohio/Penn DX Bulletin No. 250

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 250
BID: $OPDX.250
April 15, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NE8Z, KJ4VH, N4YGY, NL7TB, NM7M, N8BJQ, KY0A, 9K2EC, 9K2HN, DF4RD, DL7VOA, DL9GOA & DX News Letter, F6AJA, G3NYY, G4BUE & DX News Sheet, IS0JMA, JH1NBN, JH6RTO, and VE7ZVZ for the following DX information.

7O, YEMEN. The DXNS report that Paul, F6EXV, is working on permission to operate from here and says that although correspondence with the authorities has been slow he is hopeful of another operation.

8P, BARBADOS. A couple of operators will be traveling here to be active over the next few weeks. Look for David, VE3VET, and Joe, VE3BW, to be active from April 20-27th, as 8P9IJ and 8P9IK. QSL to their home calls. Also, look for Bernd, DJ1TO, and Baerbel, DL7UTO, to be active April 24th through May 6th, signing 8P9IR and 8P9IU.

9K5, KUWAIT (SPECIAL PREFIX!). Hamad, 9K2HN, reports that Kuwait stations are now allowed to use this special prefix from April 7th until May 7th. The resaon for this prefix is to inform the world that Kuwait still has POWs held in Iraq for over 5 years now. A special QSL card will be issued for this event.

DINNER BANQUET UPDATE. The Southwest Ohio DX Association is pleased to announce the Eleventh Annual DX Dinner which will be held on Friday, May 17th, at the Stouffer Renaissance Hotel, Dayton, OH. There will be a cash bar at 6:30 with dinner at 7:15. The program will be "Visit Myanmar Year - 1996, The Opening of Burma" by Wayne Mills, N7NG. Tickets must be purchased in advance, and are available from Tom Inglin, NR8Z, 4061 Eaton Rd, Hamilton OH 45013. Tickets are $29.00. Please make your check payable to SWODXA, and send an SASE for ticket return. Seats are still available. All seats will be reserved. For further information on the dinner, contact Steve Bolia, N8BJQ, at (513) 429-9954 voice/ (513) 429-0218 fax or via Internet at n8bjq@erinet.com

FM, MARTINIQUE. You might be able to catch Bruno, F5JYD, and Eric, F5SSM, before they leave on April 18th. Both are signing FM/honecall. Their activity will be on SSB and operating on 15, 17, 20, 40 and 80 meters. There may also be some operations from St. Luucia (J6).

HC8, GALAPAGOS. Starting next weekend, look for DF1VU, DL4VCG and DK5VP to be on the air signing homecall/HC8 between April 21st and May 10th. They will mainly be on 40-10 meter between 1400-1800z running 700 watts into a 2 element Quad. Outside of this time period there is no power on the island, but they are thinking about working with 50 watts from a battery. QSLs via homecalls.

IY0GA, MARCONI SPECIAL EVENT STATION. Begin looking for this station from April 19-21st. The station will be active from the lighthouse on Cape Figari Golfo Aranci (MT. 340), Sardinia Island, where Guglielmo Marconi carried out a microwave test with Rocca Di Papa (Rome) on August 11, 1932. IY0GA will be active on all modes and bands including activity on OSCAR 10 and 13 (MODE B). QSL via IS0JMA, Roberto Alaimo, P.O. Box 41, 07026 OlBIA (SS) Sardinia Island, Italy. JUST A REMINDER: This is just one station among many other stations which is included in the Cornish Radio Amateur Club Cornwall, U.K., that will participate during the "International Marconi Day", April 20th.

NEW BOOK. Bob Brown, NM7M, who writes the propagation column for Worldradio, has written a book, "The Little Pistol's Guide to HF Propagation", and it has finally rolled off Worldradio Books' presses. He expects that it will be available at the Visalia DX Convention and certainly the Dayton Hamvention. If you're intested in HF propagation, you might check out the book at these conventions or watch for the next issue of Worldradio for an announcement.

PIRATE DEPARTMENT..... Abdulmohsen Al-Ajeel, 9K2EC, reports that a pirate is using his callsign on 80 meter SSB. 9K2EC states he personally has NO antennas for 80 meters, plus he never uses SSB on any band (VERY VERY RARELY if he does!). The pirate claims his name is "Murcado"..... There has been a rash of KH6 pirates operating lately. Investigate your contact before QSLing.....

QSL INFO FOR DX1EA, YV5A, CP6/OH0XX, CP6AA AND OH0XX/DU1. Send your QSLs to Olli Rissanen, OH0XX, Suite 599, 1313 So. Military Trail, Deerfield Beach, FL 33442, U.S.A

QSL INFO. Dr. Rick Dorsch, NE8Z, informs OPDX that he is the new QSL Manager for Roberto Camacho, HC6CR - HD6CR. He can confirm any old QSOs that Roberto has made. Roberto is probably the most active DXer in Ecuador on the digital mode. QSLs should be sent to only the 1996 CBA: Dr. Rick Dorsch, P.O. Box 616, Hamburg, MI 48139-0616, USA.

S7, SEYCHELLES. Gerard, F2JD/5R8EN, is currently back on Seychelles Island for about one or two weeks. He doesn't have a rig with him, but he has taken a keyer with him and if he can find a rig he will reactivate the callsign S79JD. On his return trip to Malagasy, he will stay few days on Reunion Island and may use FR/F2JD.

Also, look for Seiji, JH6RTO, to be active from Seychelles from April 29th to May 5th. He expects to sign S79SF. QSL via JH6RTO, Seiji Fukushima, 2-183-A207, Soubudai, Zama City 228, Japan.

TI9, COCOS ISLAND. JH1NBN, TI5RLI, TI5KD, JI3ERV and 7L2RPY will be active from here beginning around April 26th and they will return to Costa Rica May 5th. The callsigns to be used are TI9X for HF and TE9RLI for satellite operations. Activity will be on 160-6 meters using the usual DX frequencies. Also, look for them on AO-13 and AO-10. QSL via JH1NBN (CBA). Please use return envelope bigger than 4 inch X 6 inch.

UNITED STATES ISLAND (USI) AWARDS PROGRAM NEWS..... NL7TB and sons may be on from Harper Island, WA (new- Sprague Lake/Adams County) on Saturday, April 20th, starting around 1730Z. (PLEASE NOTE: This wind swept lake is usually turbulent. Harper Island is about one-half mile from shore. If no activity takes place, the island will be scouted out for a future trip.... ... Barren Island update (NEW! AK-95S). Everthing is a go (refer to OPDX.242). Rick, N6IV, has the ferry tickets in hand and John, NL7TB, has purchased his airline ticket to Anchorage. They are booked with Ultimate Charters for their July 4th operatioin. Wish them good WX and propagation!

V5, NAMIBIA. Charlie, KY0A, will once again be active from here during July and August of this year. The callsign this year will be V5/ZS6YG. Charlie mentions he will be active mostly as a mobile station in the northern part of the country but mainly from Etosha National Pan. He has outfitted the van with a 500 watt amplifier in hopes to satisfy those that he could not work on the WARC bands last year. All QSLs go to KY0A. Please, no QSLs to the ZS Bureau. In all likelihood these will never be answered.
Also, Charlie informs OPDX that WB0HBS, KV0Q, W8UVZ and himself will be going to Namibia on February 10, 1997, for an all band effort in the ARRL CW contest next year. The operation will take place from the Lighthouse in Luderitz. They plan to concentrate on the low bands and the WARC bands outside the contest. Gary, K9AY, is again supplying the low band antennas. They will phase two of his verticals for 160 meters as well as having a beverage for receiving capability. They will also have a Cushcraft R-7 and A4S tribander along. Charlie is not yet sure of the callsign that they will be using, but for right now, it is again V5/ZS6YG. However, Charlie is going to stop and see a Mr. Schutte, the head of the PTT, and request V52YG, the original call they requested several years ago before a glitch in the process arose. Charlie really does not expect any problems as they are quite cooperative and eager to assist the amateur community. Updates will be forthcoming in the future.

V7, MARSHALL ISLAND. Bob, WW1V, will be active May 2-14th as V73W from Kwajalein. Activity will be mostly SSB but some CW, and there will be an emphasis on 40 meters. QSL to home call.

UPCOMING VHF CONTEST STATION. The Mountain DX Club of Port Coquitlam, British Columbia would like to announce a VHF expedition to the 8,000 ft peak (or near it) of Blackcomb Mountain at Whistler, British Columbia

for the CQ World Wide VHF Contest July 13-14th. The Mountain DX Club is an informal group of amateurs out to exploit some very rare grids and to help VHF DXers collect a few extra grid squares. They will be active on 6m, 2m and 70cm with 100 watts and a longboom yagis. Due to the remoteness of the site anything higher has been deemed impractical. The Grid Square is CO80, and to the best of their knowledge has never been seriously worked on VHF before. This expedition has been made possible due to the generous support of CQ VHF Magazine and the Blackcomb Mountain Ski Corporation. Their yet unapproved callsign is hoped to be VA7SKI. In the event that the approval is not granted the call VE7VDX will be used.

WANTS TO BE A QSL MANAGER. Chris Penick, N4YGY, is willing to offer his services as a QSL Manager for some deserving DX station. He can be contacted at 1-704-264-757, on Packet at N4YGY@KD4OM.#HKY.NC.USA.NA or via InterNet at cpenick@appstate.campus.mci.net

ZD8, ASCENSION ISLAND. Des, G0DEZ, will be active from late May until the end of 1996 with the callsign ZD8DEZ. His activity will be concentrated on HF and 50 MHz, mostly CW, but also with a little RTTY and SSB. There will be some QRP activity around the recognised QRP frequencies. Times of operation are not known due to the unpredictable nature of Des's shift-working. However, he intends to be be active in all major contests for the remainder of 1996. All QSLs should be via bureau to G0DEZ or direct to: Des Watson, 12 Chadswell Heights, Lichfield, Staffordshire, WS13 6BH, ENGLAND. PLEASE, send NO QSL cards to Ascension Island!

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Hi Mike. There is WWW page on interference problems from the FCC: Goto URL

http://www.fcc.gov/Bureaus/compliance/www/tvibook.html

Or using a search engine -- search for FCC page.

My 1996 ARRL Handbook for Radio Amateurs has lots of info.
Drop bye ur local Ham Radio Store -- have seen several books devoted to
the subject.

Pick up QST and look at the publication page for an Interference Handbook.

Hope this helps

5302. MORSE CODE font, now with puncuation marks morse.ttf 1/1

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-14 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseDpvJn8.Aq2@netcom.com>
Source record: 227662
Cross-posted to: alt.binaries.fonts,rec.radio.amateur.misc
Body handling: Inline uuencoded payload not displayed: morse.ttf

An updated version of a Truetype MORSE CODE font for Windows.
Set the points around 40 or above for best results.

To add this font to windows 3.11: Go into "MAIN" and then "control
panel", then "FONTS". Select ADD, and select the path to where to
find this new font (Probably best to put morse.ttf in the c:windows/
system directory). In the sample window, you'll see a tiny set of
morse code characters (about one pixel tall, and several long).
Do an OK and it will be installed.
The below file is UUencoded, needs to be uudecoded first. If you're
using rn or trn, hit "e" now, and it will be decoded to morse.ttf
I hear similar can be done with Netscape. Then using BINARY mode,
download it to your PC.

[Inline uuencoded payload not displayed: morse.ttf]

5303. Test sessions in NE Wi

>Please help, I am really excited about having the time to get on HF now...

>Mike WB2TBQ

Mike,
It's gonna be tough with an attic antenna. Put toroids on
everything - speaker leads and a.c. lines. Sometimes a small disc
ceramic (about 0.01 or so) across the speaker leads on the stereo will
help. Don't use anything bigger, it will affect the audio and maybe
the impedance the amp sees. Same thing for the computer speakers.

You might try qrp, I've been working the contest this evening and
am working all over the country on 5w! Not bothering my wife's tv
either!

RCA WT-100A and/or Hickok 700 tube tester wanted. Seeking unit in good running condition, needing some repairs or for parts (if I later come across a working unit). Willing to swap for something or please state a fair price for the respective unit. I would prefer swapping something as cash is tight, but I would have to find out what you are looking for -- I may have it. Please indicate if you have manuals, schematics, charts and/or plug-in tube sockets for the respective tube tester.

Kindly, email with details.

Thank you.

Having email problems -- my correct address is:

5314. Solar Cells Efficiency?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-14 00:00:00 UTC
From: flanders@znet.groupz.net
Message-ID: <4krn9u$hps@news1.sunbelt.net>
Source record: 227723

Last September, I bought three unused 12" x 24" PV panels at a hamfest in NC. They were unmounted, just the glass panel with the bare metal coating on the back. I was told they were rated at about 900 mA at about 18 volts each.

I have finally gotten around to actually connecting electrodes and testing them out. The first one only put out about 250 - 275 mA in bright SC sunlight yesterday (charge current into a 12 v lead-acid battery, with an isolating diode in the circuit (same without the diode - I checked).

I thought that perhaps the first one was bad, so last night I wired up

connectors to the remaining two and tested them out today. Same thing - about 250-275 mA each. Right now, all three are going, with a separate isolation diode for each, charging a total of about 800 mA in full sunlight. I briefly shorted the three while connected together, and measured only about 1 amp total (about 27V open circuit).

Keep in mind that I am talking about 6 square feet of collector area, and there is as yet no protective glass or cover of any kind. Quickie rough calculations tell me my efficiency seems to be way down.

Any comments? What charge current do you guys get per square foot with PV cells? They have been unused for a long time - any reason to expect

improvement in the future? Maybe I just got rejects - would rejects be as consistent as this? Do rejects deliver low current, or low voltage, or what?

Jerry W4UKU flanders@groupz.net

5315. Are telephone DTMF the same as our DTMF>

Dean, you should have to pay for your own awards. After all YOU hang
them on YOUR wall, so why should the guys you talk to on the radio
pay for them for you ? I am not the least bit interested in DXCC, WAS,
or any other awards. But in the past I have played with HF. Consider
this:

From January 12th, 1986 until now I have worked 47,816 stations on HF.
From that total, 14,255 stations are from the U.S., leaving a total
of 33,561 non U.S. stations. If I sent everyone I worked a QSL card,
at my expense, the postage would be (using old postage costs):

U.S. 14,255 @ $0.28 = $ 3,991.40
Non U.S. 33,561 @ $0.50 = $16,780.50

For a total of $ 20,771.90 postage. Add the cost of 47,816 envelopes,
and 47,816 QSL cards. Lets, for argument, say the cards/envelopes
cost $ 2,300.00. Add that to the postage, and you get ruffly
$ 24,000.00. Now, do you have $ 24,0000 tied up in your radio
equipment ? I doubt it. So why should I tie up $ 24,000.00 in awards
to hang on other people's walls ?

By the way, the above figure does not include computer labels, printer
ribbons (I use computer logging) and my time.

Another thing to ponder, as I mentioned before: Out of 47,000 pieces
of mail, how many does the post office loose ? I don't know exactly
but I imagine a few. I still get cards from people I worked 8 years
ago. If they needed a card, why did they wait 8 years to send me one ?

And why do they think after 8 years I am still so interested in ham radio that I should stop what I am doing, dig out QSO info from 8 years ago, and answer their card RITE NOW ?

I never was interested in collecting cards. At first I thought it was my 'responsiblity' to answer every card I got. I have sat and answered 6,000 bureau QSL's at one time. Now I can throw a handful of bureau cards in the garbage without blinking. I have even instructed the bureau here to save me the trouble and throw them away for me.

The bottom line is this. The more rare a station is, the harder it gets to QSL him. But if YOU want a card for YOUR award from somebody else, YOU should pay for it. I don't care if the guy is two blocks down the street from you, if you want a card back you should include an S.A.S.E.

DXCC, WAS, and other awards, in my opinion, should be given out on the basis of a log. Never mind the damn QSL cards. If you want to cheat on your DXCC, why should I care ? QSL cards do one thing that a lot of hams don't realize - they make rare stations stay OFF the air or only talk to certain people they know. If it wasn't for the fact that the ARRL insists on QSL cards (in my opinion, so they can keep one more person 'employed') there would be a few more DX stations on the air to talk to.

What hobby are we in anyway, ham radio or are we all looking for 'pen pals' or trying to keep the post office in business ?

5321. Connecticut QSO Party May 4-5, 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-14 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <4kqkqd$51j@newsbf02.news.aol.com>
Source record: 227730

1996 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 4 until 2000Z May 5, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single Multi-multi classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange report and state/province/DXCC country.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low end; Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150, 144.200, 146.580. RTTY - Normal RTTY Bands (No WARC Bands)

Score one point per phone, RTTY QSO and two points per CW QSO. QSOs with club station W1QI and ARRL HQ station W1AW count 5 points. CARA will be operating W1AW on Sunday, May 5 from 1400z to 2000z, on or near the above-mentioned frequencies.

Connecticut stations multiply QSO points by states/ provinces/Connecticut counties worked (DX only one multiplier); others multiply by Connecticut counties worked.

Plaques and certificates (100 point minimum). Special certificate for working all 8 Connecticut counties.

Send entry and SASE for results by June 5 to CARA, P.O. Box 3441, Danbury CT 06813-3441.

Good luck and 73 de Jim, KD1YV

In Germany the DARC has a own sorting machine and distributes QSL
cards to members free of charge within Germany or world wide.
If the ARRL would spend the dues on this type of activities there
would be quite a boost in members. But you can lead a horse to water
but you can't force it to drink.

The Moultrie Amateur Radio Klub is having its 33rd annual hamfest on
April 21, 1996 in Arthur, IL.

The hamfest is being held at the Moultrie/Douglas county fairgrounds
right behind the Arthur High School off of route 133.

We have a large indoor vendor area as well as free tailgating. Ticket are
$4.00 per person over 14 years old.

Talk in is on 146.055/146.655 and 449.275/444.275.

Tables are available on a limited number in the main building at $8.00
per table. For more information or to reserve a table call daytime
217-543-2178 or evenings 217-873-5287 and ask for Ralph.

Thanks

I assume you are referring to the "GB2 Rise and Shine" news bulletins?
I must confess I found its contents quite useful this week, as it
included details of the Swansea Mobile Rally ... from which I have just
returned. (A very good show, but like most others nowadays it had as
much relevance to computers and CB as to amateur radio. The RSGB stand
appeared to be absolutely deserted all day. Even the "International
Listeners' Association" stand attracted more interest ... and I had
never heard of them before!))

Yes they are, but we also use the last 4 DTMF tones, A,B,C, and D
which aren't on most phones. A portable tone dialer can work, but
you've got to watch out that your mic has good response and that
you hold the portable dialer at the right distance from it to
get the proper deviation. It's not an ideal setup, but you can
make it work.

Have just order my first HF rig and would like to use it on a random length wire. I have a 60' tree about 120' from the shack. My plan was to get the wire up the tree (14 gauge copper) and then attatch the other end to the roof.

I guess my question is how I connect the thing to my rig. I order a tuner also but am not sure how to feed it. Can I run a coax feed line through the wall and up to the roof? I so, how to I connect it and do I need to ground the shield up there somewhere?

Thanks for the help!

5337. RAC 'n Rollup Callbook Software Q&A

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-14 00:00:00 UTC
From: steve.hajducek@bytewise.org
Message-ID: <127.308.20@bytewise.org>
Source record: 227746

Subject: RAC 'n Rollup Questions and Answers
Date : 1996 - Sun. Apr. 14 13:40 Local/ Sun. Apr. 14 18:40 Zulu
From : Steve Hajducek, N2CKH
TO : ALL RADIO AMATEURS

The following are some of the most common questions and answers regarding RAC 'n Rollup that have been exchanged via internet e-mail during the last week.

Q: Can I order from you both the Callbook CD-ROM and your RAC 'n Rollup program ?

A: No. However it is readily available from many sources, with the lowest price I have seen being $39.95 U.S. from AA6EE at 16832 Whirlwind/DX10, Ramona, CA 92065 as advertised in "The DX Bulletin".

Q: Does your program run under Windows 3.x or Windows 95 ?

A: Both. The application is 16 bit and has been tested under both environments. The only anomoly is that under Windows 95, the environment tries to take control of a program caption bar, system menu and min/max buttons. At the same time RAC 'n Rollup is also taking control of these capabilities, and the only time a user will notice the clash of these two titans is when the user selects the Control Box, a.k.a. System Menu. It is only a cosmetic thing, but the user will see the caption bar split and the emerging Windows 95 min/max/exit buttons in the upper right hand corner of the screen. Close the menu and it reverts back to normal.

Q: What are the recommended mailing labels to use ?

A: I use Avery 4013, 3 1/2 x 15/16 inch 1 accross for my dot matrix printer and tested with Avery 5261/5161 20 sheet count, 2 accross with laser and ink jet printers. One of my more frugal amateur friends prints on paper, cuts and clear tapes his... Hi

Q: What good is copying to the Windows clipboard ?

A: That depends on what software you have, may get or may write. I added the capability for those that may need it, after all, in the Windows environment it is a way to export/import data.

Q: I have the demo, my question is if the demo works on my PC will the registered version work ?

A: My answer is that it should. There is a lot more to the full version of the application, and not all Windows installations are

the same, especially under Windows 95, so I can not quarantee it.

Q: Why can't I move the program from the top dead center on my screen,
is this a bug ?

A: No, it is not a bug, it is the way that I wrote the application to
behave. For Windows 95 I am working on making it dockable as well.

Q: Why did you disable printing in this demo, I would like to test
printing.

A: The approach to design that I have taken utilizes an additional
engine for indexing and printing, which would have may the demo
twice as large to distribute.

Q: I have the demo, it does all that I need, I hand write my air mail
envelopes, but now I have the country information I needed. Can I
just register the demo ?

A: If the demo fills your needs, then you are all set. The demo can
be used as long as you like without any purchase. However there is
NO support offered or updates offered for the demo.

Q: I got bits and pieces of of information about your new software
from the CQ-Contest relector, please tell me where I can get a
copy to check out ?

A: The file name is RAC_DEMO.ZIP and is 1.3MB is size and takes
about 5 minutes at 14.4KB using Zmodem protocal. At present it is
available from the support BBS at 1-908-363-2760 and both the ARRL
and Kenwood BBSes. It will be placed on various FTP sites as time
permits.

RAC 'n Rollup now shipping and is only $ 9.95 U.S. plus $ 1.50 U.S.
shipping/handling in the U.S. or $ 5.00 shipping/handling overseas.

Send your orders with Callsign, e-mail address and mailing address to:

RAC 'n Rollup
C/O Stephen B. Hajducek
U.S. Post Office Box 8
Morgranville, New Jersey
07751-0016

Please makes checks or money orders payable to Stephen B. Hajducek.

Thank you.

Who were the bright folks that scheduled the Boxborough Convention and Hosstraders for the same weekend??

I think maybe we gotta blame Hosstraders for this one..

Boxborough is announced at the convention. If you go to the convention in October, you'll know when the next one will be to the date and where coming up in two years..

I think I'll go to Boxborough!!

5339. Different(ial) RFI Problem: partial solution

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-15 00:00:00 UTC
From: psoper@encore.com
Message-ID: <Dpwy6B.AD3@encore.com>
Source record: 227598
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

A while back I posted an article to the Antenna group describing how the 100 watts from my HF rig through a G5RV or 20m Lazy-H was coupling into my stereo speaker leads. The RF found its way to the front of one of the amp stages, getting demodulated in the process, and the result was audio out of the stereo's amplifier independent of its volume control setting. Disconnecting the speakers and listening via headphones confirmed that it was the speaker connections allowing the RF through (in contrast with the problem affecting Mike, WB2TBQ, where the AC line cord is the path into his stereo).

I tried various common mode chokes, including seven of the Radio Shack, snap together rectangular filters. I also tried smaller gauge wire wound bifilar around some Amidon FT-50A-75 toroids. No dice: the RF current appears to be differential, not common mode.

Using the same toroids wound as inductors I made low pass filters for the speaker leads and this cured my problem on 15, 17 and 20 meters. The problem remains on 40 meters. I'm hopeful that by tweaking the filter parameters a bit to get the cutoff frequency down lower I'll get enough attenuation on 40 meters to have a complete cure.

What I'm currently using is a series 12uh inductor (5 turns of hookup wire around the above toroid) with .1uf parallel capacitors on either side of the inductor.

I started out with about 40uh (9-10 turns) but found this caused a strange kind of distortion of the stereo sound when playing music. It didn't chop the highs as I expected if I got the cutoff too low. Instead it caused a scratchy, harsh distortion. I was quite surprised by this effect, as 40uh would seem to be neglible to the stereo amp at audio frequencies in comparison to the inductance of the speakers themselves. I wonder what is happening here?

Also, the above toroids are the ones spec'd in a telephone RFI article from QST some time ago (past year or two I think). With the number of bifilar turns of magnet wire (and the same gauge) specified in the article, the phones in my house were disabled by this filter. It was as if the phone was off hook. Tests showed I didn't have a DC short and three different phones suffered the same effect. For the next experiment I'll be removing turns until the disruption goes away, then checking to see if there is enough common mode filtering left to give my wife relief from my noise.

To the wordy regulars of the Antenna Usenet group (and you know who you are): WOW, I sure have been getting an education reading your stuff. Thanks, guys!

Regards,
Pete
KS4XG

5340. ***** Please help FT-10 Mods needed..*****

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-15 00:00:00 UTC

Can anyone help,
I have a Yaesu FT10R (b1) and wonder if anyone has any
mods for the radio?.

If you all ready have a FT10 with extended RX could you please

1. Remove the battery pack.
2. Remove the "Ni-cad" sticker (The sticker will peel off with any
damage to itself.)
3. Remove the two screws which secure the keypad.
4. The keypad will now be released from the radio.
5. You will now be able to see the green PCB and Solder pads (H,I,J)
and SMT Chips/Mounts (k,L,M,U,V).
6. Grab a pen and paper and take a note of the position of all the
pads ETC.

Eg. l,M,V are Chiped and Pads H,I are soldered.

7. Reassemble the radio.
8. Please E-mail me DIRECT with your findings..
9. Give yourself a big pat on the back..!! and have a cup of coffee.

Please Remember to E-Mail me DIRECT...

Thanks Ray..

: 20, and would like to be at 15 wpm at least. Any suggestions appreciated.
: Thanks!

: --
: Jay Huldeen
: jay@usa.net

Jay -

The learning plateau at 10 or 11 wpm is something that has been known about for many years. In fact the 13 wpm code speed requirement was deliberately selected because it was just beyond the plateau! What's going on is that you are not yet used to hearing the letters at the higher speed. If you have a computer with code practice software, you might try spending a week or so just listening to 17 wpm or so (the next plateau). Don't worry about copying it, but if you can, so much the better! After the letter sounds are more familiar to you, you may find that you're able to copy 13 wpm without much trouble.

The 17 wpm plateau is due to the fact that at higher speeds, there isn't enough time to write the letter if you copy letter for letter. The 20wpm level was selected with that knowledge in mind! Above 17 wpm, you have to stack 3 or 4 letters that have been heard but not yet written down without losing them. At still higher speeds, CW becomes more like a language where you hear words instead of letters. Folks who copy much faster (I'm told) don't write stuff down because they can't write that fast, but they sure can hold a conversation!

A demo for yourself... Write "The quick brown fox jumps over the lazy dogs back" 10 times as fast as you can. If you print when copying code, print it. Time yourself doing this. This will tell you how fast you can write cw or not - an interesting number to know...

Archive-name: radio/personal-intro
Revision: 2.1 1994/11/01 03:50:23
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Most likely it's the battery. I just did the replacement on mine. A tiny
soldering iron, patience and a steady hand are needed.

5346. Help with FT736 mod.

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-15 00:00:00 UTC
From: Scott Macmillan <scott@golfmike.demon.co.uk>
Message-ID: <HJEuXFAXpqcxEwcF@golfmike.demon.co.uk>
Source record: 227605

I have a Yaesu FT736R fitted with the FTS-8 tone squelch unit.

I want to mod the radio so it can switch on other equipment
(such as a tape recorder) when the FTS-8 receives a valid tone,
and opens the squelch.

Someone told me to connect a wire to the front panel 'BUSY'
light, and us a transistor to switch a relay. This is almost what
I want, but the busy light comes on even when the FTS-8 keeps
the squelch closed.

Any ideas?

From: km6xu@wco.com
Message-ID: <4kudph$ojr@news.wco.com>
Source record: 227607

cc wynn (wyn) wrote:
: Glenn McAllister <glenn@actrix.gen.nz> wrote:

: >ZL will continue to bring this up at every IARU conference until the world ingeneral
: >realises that CW is an obsolete mode and is is ONLY ONE FACET of amateur radio

: It has been reported on this forum more than once that about half of the QSO's
: currently found on the HF frequencies are CW. So, how do you reason that
: MF/HF CW (OOK Morse) is an obsolete mode? Is it just because you want it to be,

The term "obsolete" simply means that a method is no
longer the most efficient of all available choices.
For example, there exists much equipment in the
telecommunications network that is obsolete, but it
is in place, it works, it is paid for, and thus it
need not be replaced unless it becomes problematic.
My ten year old, 250,000 mile VW gets me to work
just fine every day, but it soon will be considered
obsolete as they make cars that are faster, get
better gas mileage, pollute less, etc.

: or that economics (unique skills are expensive!) have forced its demise from
: some sectors to be replaced by digital gimmickry with dubious reliability?

What may be gimmickry to you is very well understood by others
in terms of performance and reliability. Any mode has its
strengths and weaknesses including CW which ultimately is the
most simple of all digital modes! Why should we have stiff
requirements for one of these modes, and totally ignore all of
the rest of them?

: Why do we still hear commercial 500KHz stations on CW? Has the false economy
: been exposed? Inquiring minds want to know.

I hate to tell you this, but our friends at the Coast Guard
on the west coast of the USA no longer monitor 500 KHz.
2182 KHz SSB is simply better, and the CW capabilities of
its users are nothing to write home about.

5351. IOTA contest eu-095

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-15 00:00:00 UTC
From: f5cco@es-conseil.FR
Message-ID: <3172C9F7.291E@es-conseil.fr>
Source record: 227610

Hello,

Just a message to inform about our activation from EU-095, ME-004
(Planier island) for the IOTA contest the
last week end of July.
For the contest all operators will be sign with the home call:
F6JSZ/P in cw
F5CCO/P in ssb
we will be active on all bands and for the om interesting from satelite
you will be have also:
F1IXQ/P on satelite.

For the qsl you can send via the buro to the home call or direct to:
F6JSZ: Mark A. Kentell P.O BOX 76 19002 TULLE CEDEX
F1IXQ: J-Michel Gueugnot - 208 rue de l'oradou 63000 Clermont ferrand
F5CCO: Eric Fayolle P.O BOX 29 43300 Langeac

For me i will be also active from J6 from 27-06 to 4-07 for my honeymoon
(but i'll be have my radio), the
license is on the way.

For more info for the HF part you can e-mail to me at:
f5cco@es-conseil.fr and for satelite to F1IXQ to:
gueugnot@nat.fr

Hey scott, you just seem to be everywhere I turn :) Yep, I've checked.
I've also checked the web page of a company that prints books of that
sort (http://home.earthlink.net/~artsci/repmain.html), but california is
empty.... :(

>Thanks Again

>Dave KB9MXD

Well Dave, last time I was in So Cal, they didn't use call signs.. So
I guess when in Rome... (GRIN)

But seriously, when my wife and I went to LA last year, it was crazy
on 2m. Who ever they were didn't use calls, had extremely foul mouths,
and tried to cover each other up.. (Hmm, sounds familiar.. CB?)
I finaly asked a couple of guys on 440 about the trash on 2.. They
told me "we have to give them somewhere to play or they'll be all over
the bands.."

I shut my radio off until we left later that week. Sad, really sad..

>N0ZYA <<CW fer LIFER>>

Hello.. Yes i can really recomend a windows based logging program
called EASYLOG .. it handels both logging while conected to DX-cluster
so you can se what happends and if a dx appear you will directly se if
you worked that prefix and on wich bans and so on.. The logging part is
also good and it can handle a few diplomas also. so i rally thin this is
the best logging program on the makret today.

For thoose who are interessted in VHF and above i can inform that it
handles Squares perfectly !! you can se directly on wich band you have
worked wich square and count all squarez you worked on 23cm for example..

so you second request... where to get it on internet..
the best place is proably my hompage !! at the moment anyway..

I've made a number of major changes to my Ham Web site.

1. Ham Club web page development.
2. New Ham opinion page
3. Review unique Grad-N-Go FieldDay type antenna system.
4. Opening the first Ham Purchasing Club.
5. Our site continues with such favorites as the Free on-line classified ads page.
6. The Ham Poll
7. Great Ham Links
8. and our Discount searchable Ham Catalog.
9. I added HTML Level 3 and Java scripting to the site
10.I've also added an alternative TEXT ONLY option at our browser selecting front door.

Thanks for taking the time to read this message. If you should visit my site please e-mail me your opinion on its new design and offerings. 73's Ray

5362. Re: Code speed wall solution?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-15 00:00:00 UTC
From: Roland Burgan <rburgan@up.net>
Message-ID: <4ktrd4$itc@btc1.up.net>
Source record: 227621

If you have a computer code program available, set you charactor speed to 20 or 22 wpm. The biggest problem I've found, re the "wall", comes from having to relearn the sound of charactors as you pass the 10-15wpm level. The 7 to 10wpm charactor speed used at the lower speeds changes drastically in recognized sound as the code speed increases. The Best way to learn code is to use the 20-22 wpm speed (or higher if interested in learning high code speeds) right from the beginning.

May as well drag you into the fray Ken. This comment from Mr Mendelsohn is referring (I assume) to the agenda set for the 1999 WARC conference. The no code HF license is supported by some folks down under and has some EU support. If the amateur community wants to retain the CW requirement, the amateur community must make its desire known to the people who will be making those decisions.

This is not a US decision, however the US could still require morse as a requirement. The licensing requirements have been substantially different in many countries for many years.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z APRIL 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 APRIL AND FORECAST FOR 15 APRIL - 17 APRIL

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 13 Apr
Daily Proton Fluence >1 MeV: 7.1E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.4E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Apr 16 Apr 17 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 13 Apr
Learmonth 17 2233 3335
Fredericksburg 16 9
Planetary 20 9

Observed Kp for 13 Apr: 2322 2223

2B. MAGNETIC FORECAST
Date Ap Conditions
15 Apr 25 Active
16 Apr 20 Unsettled to active
17 Apr 15 Unsettled to active
COMMENT: Active conditions with possible minor storm levels expected
over the next 2 days.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
14 Apr Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
15 Apr Fair Poor Poor
16 Apr Normal Fair Poor
17 Apr Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
14 Apr 1

Observed Australian Regional MUFs:
Darwin: Not available.
Townsville: Near predicted monthly values.
Spread F observed 15-18UT.
Sydney: Near predicted monthly values.
Canberra and Hobart: 15-30% depressed 00-08 UT, otherwise
near predicted monthly values.
Spread F observed 08-18 UT.

Predicted Monthly T index for April: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
15 Apr 5 near predicted monthly values
16 Apr -10 15 to 30% below predicted monthly values
17 Apr 0 about 10% above predicted monthly values
COMMENT: Increase in geomagnetic conditions expected to degrade
HF comms over the next 2 days.

Bruce,

IMHO, it is. Just be sure to test all the rigs in stock for a birdie on 146.76. Some have it, some do not. Mine has it, and it is in the shop for the third time trying to fix it. BTW, get the TSP with it. Covers all, including my 2 year old dropping it out the car window. Not that he has done that, but I asked and was told it even covered that. ;)

>Ideas or news, anybody?

Hi Bill,

Well, around here quad's don't usually survive more than a year<g>.
The ice and offshore winds in winter take their toll. After repairing
them a few times one gives up and word gets around to prospective
users. Basically the effort required to install and maintain is
considerable, at least here.

I think another factor is the increasing need for "aesthetically"
pleasing structures or low profile ones. While a quad is technically
beautiful, it isn't, to be honest very aesthetically pleasing, and
certainly not low profile <g>.

>Thanks!

Probably not adviseable. I have the old FT980 with the same final
stage as the FT1000D. The limiting factor is the power supply/heat
sink. I did make the Fox Tango change to run 120 to 130 watts with
the 980.

A slightly annoying problem has recently developed in my Alinco DJ-160
2m handheld. When the radio is turned on, the display is blank. The
only way to bring the radio back to life is to reset it by turning it
on with the F switch depressed. Then it works fine. Any ideas?

I am travelling to Nepal in the next few weeks and I would like to
make contact with someone in Nepal or someone that has been.

Is there ANY Amateur activity ?????

ANY Help would be appreciated !!!

Cheers..Peter..vk2yx

Spring Has Sprung so it time for the seasons first...

We have a new larger lot just 4 blocks West of our old location...

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
April 21st, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 400 sellers and
free, off-street buyers parking!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Pacific and
Landsdowne streets in Cambridge; half a block off
Albany St near Central Square from 9AM to 2PM,
with sellers set-up time starting at 7AM.

!! RAIN or SHINE !!

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

>

David,

Personally I took great offence at Walt Davidson's so-called joke about precocious
eleven year olds and heavy iron files.

When I first read it I didn't really see the funny side. Especially since I come from
a small village just 10 miles north of the school at Dunblane and went
there quite a few years back. ?I still don't see the funny side.

you have to realise that not everyone thinks like you, acts like you, or reacts like
you.

There are readers who would have found the "joke" funny and readers who did not.

I for one did not. And I can name plenty of local people who didn't either since I have been gettting their views on whether I should have posted such a strong use of verbal graphic language and what they thought of the "joke".

None of them thought it was funny. They seem to take violence of any kind seriously here whether in thought, verbally or physically. Just like they take the church seriously and don't make off the cuff remarks about God or anything to do with religion.

It's been interesting reading all the replies I've got back about that article.

Some agreed that the joke was offensive in light of Dunblane. Some didn't (especially from America
which didn't surprise me). They must be used to violence over there.

Actually there's a petition doing its rounds which 40,000 people have signed which wants to ban the private ownership of handguns of any kind.

I do apologise to Walt Davidson and other parents for the remarks I said about his personal and sexual orientation. It was a bit off the wall.

But like I said you have to realise that not everyone thinks like you, acts like you, or reacts like you. So something you find funny especially if its black humour, others might not.

Even if you think its got no hidden meanings at all or no double entendres - it can still do damage in ways you can't imagine.

I'm saddened that no one seems to be able to see it from my point of view - Sign of the times I guess. But as soon as th 40,000 people who have signed the petition change their minds about violence and as soon as the people who I asked do, then maybe I will try to do so too.

but remember this - there are two sides of every story and if anyone can't see my point of view or why I made such remarks or even why I took offence at the "joke" especially since I live so close to Dunblane the I don't really think you should be on this earth.

Regards,

David

charles copeland (charles1@netcom.com) wrote:
<snip...>

: I've kept up with this entire thread. YOU read my posts on this thread,
: apparently you haven't or you would know my point of view.

This isn't the only blob of messages floating around with the title
'HF Sucks'. I think the party has been going on for a while before
you showed up Charlie boy.

: You aparently, haven't stopped to "Think" about what the original poster
: had in mind. He was asking for help/encouragement, stated a blunt/true
: observation, hoped to stir up HAMS to defend their hobby with
: positive informative counterpoints. Only one was mustered.
: All the other HAMS responded with nasty short-sighted "how dare you" replies.
: Its outright shameful how some supposed Elmers, respond to new HAMS.

Sure I did Charlie boy. That's why I sent him a nice long message detailing
all the good things about HF. He didn't respond to it, nor did he respond
to anything NICE anybody else tried to tell him.

: What I have observed is a kid with a legitimate point of view asking
: for feedback to encourage him. I have also observed several OLD FARTS
: with a stinking attitude, you for one. Its no wonder the hobby is dying.
: I have also observed one (just one) ham with a wonderful perspective.

You seem to be lacking in the powers of observance mode.

: >If anyone sends them anything that makes sense, they don't respond.
: You don't agree, so it doesn't make sense. How broad-minded you are.

Out of context, all f'ed up again Charlie. I never said I agree or
disagree with anything making sense. I said 'If anyone (meaning other
hams, responding to Nate's original complaint) sends them anything
(meaning a message in response) that makes sense (i.e., says something
nice about HF, ham radio, etc.) they don't respond (meaning they
don't send a message back, saying anything positive)'. Now read that
four of five times and see if you can figure out what it says.

: He made a tough statement about his observations of HAM radio,
: trying to get someone to respond and convince him HAM was worth his time.
: In response, several beat the tar out of him for "daring" to say
: anything bad about HAM radio. His initial observations were dead on.
: Only one positive truly enlightening response was put forth, not yours.

Your internet provider is apparantly screening your mail Charlie boy.
I suggest you switch to AOL.....

: I think I pretty much stated my case. When the old farts, you,
: die off, HAM radio will be a better place for young HAMS.

First you complain about ham radio dying, now you wish anyone older
than you would hurry up and die so you can have it all to yourself.
Make up your mind Charlie boy, what's it gonna be ?

: This is the internet, not 80m (I assume thats where you hang out).
: Listing call letters is an option here.I do happen to be a ham. My callsign
: is KC5LWF. I'm tech+, at 10wpm, and about to get my general.

Never assume Charlie, it only gets you in trouble. No sense in 'hanging
out' on 80 meters over here, there is no poplulated area within
the usual propagation range of 80 meters to talk to. I haven't been on
80 meters in years.

As far as 'your point of view' I haven't read anything you sent except
the bullshit that was directed at me. And I don't bother backing up
3 pages and trying to decode internet addresses to figure out who
sent something I just did read. Frankly, I could care less what your
point of view is about anything, Charlie boy. So as I said before,
you and Nate and PopGun have my permission to go off in the corner
someplace and straighten out all the problems of Amateur radio.....

As I said before Charlie, I don't have anymore keyboard time to
waste on Nate and PopGun, and I think I just added you to the
list.

Congatulations on 'about to get your general'. I hope you have
more fun on HF than Nate and PopGun did.

73, Jim KH2D

commemorates International Marconi Day;
RF Design moves; Pupils mark decade of
School Club Roundup; 1996 AMSAT confab set

FCC OKAYS OLYMPIC CALL SIGNS FOR HAMS OPERATING IN GEORGIA

Hams operating within the state of Georgia may use special call signs from April 15 until August 31, 1996, to commemorate the 1996 Olympics, under a Special Temporary Authority issued by the FCC. Here's how it works: An FCC-licensed radio amateur operating in Georgia with a "4" in his or her call sign may replace that number with "96" (representing the year) or "26" (commemorating the 26th Olympiad) during the period of the STA. Hams with any number in their call signs and operating within the State of Georgia may add "00" to the existing number (to mark the centennial year of the Olympic Games). So, WA4BKD in Georgia also could identify as WA96BKD, WA26BKD or

WA400BKD, while NG3K, when operating in Georgia, could identify only as NG300K or as NG3K. The Olympics start in July. The STA stemmed from an initiative by James Altman, N4UCK, of Atlanta and the Georgia Amateur Radio Operators Group he organized, with the support of ARRL.

FCC: INTERFERENCE PROBLEMS OFTEN START AT THE FACTORY

The FCC says it cannot resolve most of the thousands of complaints of interference to TVs, radios, stereos and televisions "because the cause of this interference is the design or construction of these products and not a violation of any FCC rule." The FCC points out that basic consumer information concerning interference solutions now is available on the Internet through the FCC Compliance and Information Bureau's home page at http://www.fcc.gov/Bureaus/Compliance/WWW. The list also is available through the Commission's Fax on Demand service at 202-418-2830. Request document 6904.

The basic information includes the CIB Interference Handbook and the CIB Telephone Interference Bulletin, among others. The Telephone Interference Bulletin states: "Interference occurs when your telephone instrument fails to 'block out' a nearby radio communication. Potential interference problems begin when the telephone is built at the factory." The Interference Handbook includes a list of equipment manufacturers who provide specific assistance with interference problems. "Involving dealers and manufacturers in the resolution process should give them knowledge of the problems and provide both the opportunity and incentive to protect their products through customer service," the FCC said in a recent Public Notice.

The Commission emphasized, however, that its Compliance and Information Bureau "will continue to take appropriate enforcement action where it has been determined that the interference is caused by violations of the Communications Act or the Commission's rules or policies."--FCC

FCC SUSPENDS LOUISIANA HAM'S LICENSE, MULLS FINE

The FCC has suspended the Technician Plus license of Irvin J. Foret Jr, KB5UJD, of Metairie, Louisiana, after receiving numerous complaints about interference to Amateur Radio operations in the New Orleans area. The action came April 5, 1996 after Commission personnel monitored and documented Foret's transmissions in December 1995 and January 1996. The FCC said some of Foret's transmissions on January 29, 1996, "constituted willful or malicious interference to the transmissions of other Amateur Radio stations," in apparent violation of FCC rules.

The FCC also contended that, during an inspection of his station, Foret "was lacking in candor and misrepresented material facts" to Commission personnel by stating that he did not make the transmissions the Commission observed. The FCC also said some of Foret's transmissions were unidentified, included music or were obscene or indecent, the alleged indecent transmissions occurring at a time when there was a reasonable risk that children were in the audience.

The FCC suspended Foret's license for two years, and ordered a final determination based on the issues in the case and whether to impose a fine against Foret. If he files a timely request for a hearing or a written statement, the suspension of his operator license will be held in abeyance pending a Commission decision. Otherwise, the suspension order takes effect within 30 days of his receipt of the FCC's order.--FCC

FCC BUSTS WASHINGTON HAM BACK TO NOVICE CLASS

Arthur P. Baumgarden of Bingen, Washington, won't be KI7CW much longer. In a case that hinged in part on Baumgarden's claimed driving skill, the FCC concluded that he obtained his Advanced class license improperly and refused to review that decision. Baumgarden, 62, said he successfully upgraded to Advanced during a 1991 test session in Carson, California, a round trip of more than 2000 miles from his home. According to the FCC, however, he later told a Commission informant that he obtained his upgrade "through payment of money, without passing the required examinations." When the FCC questioned Baumgarden, he denied the allegations. The FCC asked Baumgarden to take the test again under another Volunteer Examination team, but he refused and appealed.

FCC records indicate that Baumgarden changed his story after the FCC first took issue with his version of events and especially with the travel times he supplied. In part, the Commission expressed disbelief that Baumgarden could have driven to Carson, California, and back in the times he claimed and called the alleged travel schedule "impossible to achieve within the speed limit." Baumgarden said he made the journey in his RV. The fact that Baumgarden later changed his story "damages rather than enhances his credibility, the FCC said." The Commission also noted that Baumgarden failed to corroborate his tale or to adequately explain why he provided two versions of events.

Although Baumgarden continues to deny he obtained his amateur license improperly, the FCC concluded on March 18, 1996, that "his denials are not credible" and refused to review the case on both procedural and substantive grounds. The Commission ordered that because Baumgarden declined to appear for retesting, his operator license would be reduced to Novice and his call sign changed to one appropriate for that license class.--FCC

HAM RADIO TWINS TO APPEAR ON TURNING POINT

Twin brothers Keith Heitzmann, KK5FE, and Jake Hellbach, KK5HY, will appear on the ABC Television news magazine Turning Point May 3. Jake and Keith, who live in Louisiana, were put up for adoption at birth. Adopted by different families, they lived only 15 miles apart, unknown to each other, until they met for the first time some 15 years ago at the home of Keith's adoptive parents. "As you can imagine, it was a very emotional meeting," Jake said. The brothers have been part of the Minnesota twin study that is looking into genetic versus environmental influences on separated twins.

Jake reports the two studied together, passed their Technician tests at the same session, and later upgraded to General and Advanced about the same time. Both work in the computer field and used to work for the same company,

which led to lots of confusion, Jake said.

Among other things, the Turning Point crew shot film of the pair attending the Lafayette (Louisiana) Hamfest. "You get some pretty good prices when a television camera is over your shoulder!" said Jake. Of all the film that was shot, Jake said he hopes the program uses at least some of him and his brother on the radio. "I was glad that when it was my turn, I contacted a fellow in Cuba, so at least there was some DX on that night," he said.

HAM RADIO HAS PART IN NATIONAL MUSICAL ARTS EVENT

Amateur Radio will play a role at a musical and historical event April 12-14 at the National Academy of Sciences in Washington, DC. Special event station W3A starts operation at 0000 April 13 and continues for the next 48 hours. Run by members of the Potomac Valley Amateur Radio Club, W3A plans to operate 47 kHz up from band edges.

The event is in conjunction with National Musical Arts end-of-the-season concert, "Radio and Music," set for April 14. The concert commemorates the 95th anniversary of Gugliemo Marconi's first transatlantic radio transmission and the 70th anniversary of NBC. The musical program includes the work "Radio Music," by John Cage, as well as compositions by Paul Schonfield and Peter Schickele, otherwise known as P.D.Q. Bach.

Leonard Schachter, N3RPQ, has loaned part of his vintage radio collection for the presentation of "Radio Music," to be performed by Schickele, Nobel laureate Joseph H. Taylor Jr and National Academy of Sciences President Bruce M. Alberts. Frank Turano, KA3GAL, will display Marconi memorabilia, including a magnetic detector, spark transmitter, receiver and telegraph key. Representatives of the ARRL will host an informational Amateur Radio exhibit during the event.

THIS WEEK IN AMATEUR RADIO DOWN BUT NOT OUT

This Week in Amateur Radio, a three-year-old weekly audio news magazine service, is once again off the satellite airwaves. The program, produced in Albany, New York, by Community Video Associates Inc., had been piggybacking for the past several weeks on the Tech Talk Network, uplinked via Skyvision on Telesat Canada Anik E2. When Tech Talk Network dissolved earlier this month, TWIAR was back to square one, explained Stephan Anderman, WA3RKB, the executive producer. "Needless to say, we are very discouraged," Anderman said, adding that he'd hoped the arrangement to use Anik E2 would give the program a C-band home for several years to come.

The demise of Tech Talk Network also put the Houston AMSAT Net off the air, AMSAT reports.

Eleventh-hour efforts to secure transponder space for TWIAR on Anik E2 failed, Anderman said. He and the others involved with the service are seeking a new satellite home. "Discussions with other satellite carriers for the donation or lease of satellite space continue in earnest," he said in a letter to affiliates. TWIAR relies on donations from Amateur Radio clubs and individuals to meet production and transmission expenses.

Last fall, the program went dark as a result of the shutdown of Telstar 302. TWIAR averages 75 minutes of news, carries ARRL and RAC bulletins, contest and convention information and propagation forecasts, as well as offerings from the Radio Amateur Information Network and Amateur Radio Newsline. The program was fed to over 100 nets and repeaters throughout North America every Saturday at 8 PM. TWIAR continues to be heard locally in the Albany area on the WA2OQE repeater (145.33 MHz) and on the "Gateway 160 Meter Net" (1860 kHz) from WA0RCR. The Houston AMSAT Net also will air on the Gateway net.

OL' SOL MAINTAINS A SPOTLESS REPUTATION

>From solar observer Tad Cook, KT7H, in Seattle, Washington, comes the now-familiar word that solar activity remains very low. The sunspot count was zero on March 30 and 31. Over the next few weeks, Cook says we can expect solar flux to remain near 70, with possible mild geomagnetic disturbances centered around April 17. On the air, 20 meters should be the best daytime band, but solar activity is expected to be too low to sustain much propagation on 15 meters or above. For worldwide communication at night, 40 meters is the top choice, but the low solar activity makes this the best time of the solar cycle for 160 meters, too.

The latest projections, based on current conditions and previous solar cycles, suggest that we will be at the sunspot number minimum for the next few months. The minimum is centered around April through June of this year, with sunspot numbers in February 1997 reaching fall 1995 levels. Previous forecasts have mentioned a 10.7-cm solar flux minimum centered around spring of 1997, but the latest projection moves that period up a bit. What it shows is a minimum based on an average flux of 72 for October 1996 through February 1997, with the flux also averaging 72 for June 1996.

Spring of 1998 should present a radically different picture. By then, the average flux will climb toward 100, and 10, 12 and 15 meters should be alive with activity again. By April 1999, the average solar flux is projected to be 158, rising to 192 a year later! The next cycle is projected to peak near the turn of the century--in August 2000.

ARRL WRC-99 CONFERENCE PREPARATORY COMMITTEE APPOINTED

ARRL President Rod Stafford, KB6ZV, has appointed the members of a committee to advise the Board of Directors on policies for the 1999 World Radiocommunication Conference (WRC-99). The Board established the committee at its 1996 Annual Meeting, and set its first task as defining the process by which membership input should be solicited and the opinions of the membership objectively determined.

The ARRL WRC-99 Committee is chaired by Dakota Division Director Tod Olson. K0TO. Also named to the committee were First Vice President Steve Mendelsohn, WA2DHF; Midwest Division Director Lew Gordon, K4VX; Southwestern Director Fried Heyn, WA6WZO; Northwestern Division Vice Director Greg Milnes, W7AGQ; ARRL members Ken Kopp, K0PP, of Anaconda, Montana, Tuck Miller, KC6ZEC, of San Diego, California, and Glen Whitehouse, K1GW, of Amherst, New Hampshire; and ARRL Executive Vice President David Sumner,

K1ZZ.

The committee is expected to complete its work by mid-December 1996.

AMATEUR RADIO GOES TO GRAD SCHOOL

Graduate student Bella Romain, N4ILQ, of Carrollton, Georgia, has a healthy curiosity. For a while now, she's been wondering what makes hams willingly go out of their way to help during emergencies. Combining avocation and academe, Bella has made that question the focus of her master's degree thesis in psychology at West Georgia College in Carrollton. "The fact that the FCC mentions public service as part of the reason for Amateur Radio's existence is obviously not the whole story," she said. "It is not easy to leave the comfort and security of a warm bed to drive out into a storm to help set up an emergency shelter."

A ham for more than 25 years, Bella speaks from some experience. Since she and her husband, Stewart, KF4WC, moved to Carrollton 13 years ago, they have become active in the public service sphere of Amateur Radio. They took a first-responder course, as well as numerous Red Cross disaster-training classes "so that if we are in the field providing emergency communications, we will be better prepared to handle any kind of emergency," she explained. She reports her Amateur Radio club, the West Georgia Amateur Radio Society, works closely with emergency-management agencies, the Red Cross, and the National Weather Service "as the need arises." Club members worked with the Red Cross to provide damage assessments and communication following Hurricane Opal. They also helped with emergency shelter operations.

Bella says it's not easy to endure the tedium of long hours at an emergency communication headquarters, nor to give up leisurely weekends and evenings to take courses to be better prepared for emergencies. She says she began to wonder "what hams experience and feel during the times they participate in providing emergency help, and what some of their thoughts and reasons were for doing this." To find out, as part of the information-gathering phase of her research project, Bella is asking hams to fill out a questionnaire. She'll then select a number of hams for in-depth follow-up interviews. Among other things, the questionnaire delves into respondents' emergency communication experiences and asks them to rate both their level of personal comfort and personal safety while responding during an emergency.

For more information, or to obtain a copy of the survey to complete, contact Bella Romain, N4ILQ, 285 Timber Ridge Trail, Carrollton, GA 30117-8884; tel 770-834-5674; fax 770-830-9481 or e-mail bella@mindspring.com.

LONG-DISTANCE RESCUE MISSION SUCCESSFUL

Collins enthusiast Bob Karon, AA6RK, of Encino, California, was checking out some repairs and modifications to his vintage gear around midnight March 18 when a routine evening of radio suddenly turned dramatic. While working a Florida station using his Collins setup, Karon heard the distress call from the 44-foot Canadian yacht Cambria, which had run aground and was sinking in the Caribbean Sea, some 150 miles southwest of Jamaica. "The signal was weak and fading," Karon reports. "I had to hold my breath sometimes to hear it."

The Cambria's skipper, Kenneth Cunningham, told Karon the vessel was almost on its side and the antenna nearly in the water. When Karon discerned the vessel's position, he telephoned the US Coast Guard. The Coast Guard could not hear the Cambria's weak signal, but was able to contact a merchant vessel 25 miles away from the distressed craft. Karon, a freelance musician, stayed on the air for the next three hours, the only connection between the merchant ship and the Cambria. "I reassured the panicky crew that help was on the way and relayed instructions from the Coast Guard and the rescue ship," he said. The merchant ship eventually was able to dispatch a lifeboat to the Cambria and rescued all four crew members. Captain Robert C. Gravino, chief of the US Coast Guard's Search and Rescue Branch, cited Karon for "professional and humanitarian actions assisting mariners in distress. A job well done."--Harvey Laidman, N6HL

13-YEAR-OLD HAM HANDLES EMERGENCY RESPONSE

Vince Bernotas III, N2WXE, an active member of Burlington County (New Jersey) ARES/RACES, turned out to be in the right place at the right time on March 17, and a dirt-bike racer is glad he was. Vince, 13, and his parents were among those helping to provide communication for the 1996 Sandy Lane Motorcycle Enduro, a 100-mile dirt bike endurance race through the South Jersey pine barrens. After an Enduro rider hit a tree a mile from Vince's checkpoint, N2WXE assisted in locating the paralyzed rider, believed to have a fractured back, then coordinated response of an ambulance and emergency vehicles, including a rescue helicopter. Complicating matters was a catastrophic radio failure in both the ambulance and state police cruiser. Amateur Radio saved the day when N2WXE forwarded urgent information about the patient's location and condition to net control Doug McCray, K2QWQ, who relayed the vital information to dispatchers. The rider is reported to be recovering. An active ARRL member since he got his ticket three years ago, Vince is net control for the K2AA/South Jersey Radio Association's Hams R Us Kids Net (see QST Nov 94, p 69).--Vince Bernotas II, N2WXF

"STEPS TOWARD MORE PERFECT COMMUNICATION" EXHIBIT TO OPEN

The story of Arthur Collins, W0CXX, and the Collins Radio Company is one of genius, vision, dedication and hard work--an inspiration for anyone with an interest in radio and electronics. Starting May 4, the public will be able to get a better understanding of the man, his company and accomplishments through an exhibit, "Steps Toward More Prefect Communication," at the Linn County History Center in Cedar Rapids, Iowa, where Collins was headquartered. The exhibit will point up the value of Collins Radio Company and Art Collins to the local area and the world between 1923 and 1969. The exhibit is designed to impart to visitors--especially youth--a sense of the values and tenacity Art Collins exemplified, and how--through hard work and application of knowledge--dreams can be realized.

Photographs, print materials, equipment displays, audio recordings of historic radio transmissions and other historical memorabilia will tell the Collins story, which is broken down into several exhibit topics. These include Teenage Wizard, 1925-1930; A Business from a Hobby, 1931-1933; Radios for Soldiers: World War II; Post-War Diversification (which chronicle

the company's Amateur Radio, broadcasting, avionics, military and computer efforts); To the Moon in a Volkswagen and The Legacy Lives On.

The exhibit draws on the resources of retired Collins Radio Company and Rockwell Collins employees, the Collins Museum at the Rockwell Collins facilities in Cedar Rapids, The Collins Collectors Association, The Cedar Valley Amateur Radio Club, the Collins Amateur Radio Club and the book, The First Fifty Years, by Ken C. Braband.

The exhibit draws its name from a statement by Art Collins, then age 16, in Radio Age magazine for May, 1926:

The real thrill in amateur work comes not from talking to stations in distant lands, nor from receiving multitudes of QSL cards from all the world, although these are things to stir your imagination, but from knowing that by careful and painstaking work and by diligent and systematic study, you have been able to accomplish some feat or establish some fact that is a new step toward more perfect communication.

The Linn County History Center is at 101 Eighth Ave SE, Cedar Rapids. The exhibit will remain open 10 AM to 4 PM Tuesdays through Saturdays until February 15, 1997.--Rod Blocksome, K0DAS

MILTON E. CHAFFEE, W1EFW, SK

Past New England Division Director Milton E. Chaffee, W1EFW, of Southington, Connecticut, died April 8, 1996. Milt was 83. He served as director from 1957 through 1964. Milt was a long-time ARRL member and official, and served in many League capacities, including assistant section manager and section traffic manager in Connecticut. He was an active CW and traffic enthusiast. He also served on the QCWA board of directors.

Connecticut Section Manager Betsey Doane, K1EIC, called Milt's passing "the end of an era." ARRL Executive Vice President David Sumner, K1ZZ, added: "Milt was a stalwart traffic handler who set and maintained the standards for the rest of us for more than 40 years."

A memorial service for Milt Chaffee was held April 14 in Southington, Connecticut.

IN BRIEF:

* A special event station to mark the first anniversary of the bombing of the Murrah Federal Building will be put on the air by the Oklahoma City Autopatch Association, in cooperation with the Salvation Army. The station, N5FM, will take to the air at 9:02 CDT on Friday, April 19, 1996, and stay on the air at least for the next 24 hours. The initial operating frequency will be 3900 kHz. Activity will move to other bands as conditions require or permit. N5FM will transmit a packet message from the bombing survivors association to the citizens of the world at 9:03 CDT.--Thomas M. Webb, WA9AFM (PIC, Oklahoma Section)

* Astronaut Shannon Lucid is now a member of the Mir crew for the next four months. The Russians have approved her use of the Mir radio on 2 meters, with the call sign R0MIR. Look for her on 145.55 MHz, FM simplex. Dave Larsen, N6JLH, is now the US QSL manager only for current R0MIR and R0MIR-1 contacts. QSLs must include date, time, and mode. N6JLH will not handle SWL reports. For contacts with the Mir packet radio personal message system, include the message number issued by the PMS on the QSL card. QSLs must be sent along with a business-sized sase. (A "green stamp" to cover postage also would be appreciated.) QSLs should be sent to: N6JLH, PO Box 1501, Pine Grove, CA 95665. QSLs for previous Mir contacts may be sent to: RV3DR, Chief of Cosmonaut Amateur Radio Department, NPO Energia, PO 141070, Box 73, Kaliningrad, 10 City, Moscow Area, Russia.--AMSAT SAREX bulletin; Space News

* The president of the Israel Amateur Radio Club, Joseph Obstfeld, 4X6KJ, visited ARRL Headquarters on April 1. During his stay, he and ARRL Executive Vice President Dave Sumner, K1ZZ, discussed the upcoming IARU Region 1 Conference, which will be hosted by the Israel Amateur Radio Club in Tel Aviv the week of September 30, 1996.

* A special event station, OEM1M, to commemorate International Marconi Day will be in operation April 20, 000-2400 UTC on SSB, CW and via Amateur Radio satellite (OSCAR 10 and 13 preferred). OEM1M will operate from the Radio Austria International broadcasting center in Vienna. Hams can register for a contact with OEM1M via e-mail at info@rai.pin.at or http://www.ping.at/rai/ on the World Wide Web. Then, during the three live broadcasts of RAI's Shortwave-Panorama program that day (at 0905, 1205 and 1605 UTC), hams on the list will be invited to call OEM1M immediately on a given ham radio frequency. The program will relay the transmissions to its worldwide shortwave audience. A special QSL is available for QSOs.--RAI

* RF Design magazine has moved its offices. The new phone number 303-793-0448, and the new address is 5660 Greenwood Plaza Blvd, Suite 350, Englewood, CO 80111. Editor Gary Breed, K9AY, has departed the magazine to become president of Noble Publishing in Atlanta, Georgia.

* Pupils at Leo A. Savoie Elementary School in Woonsocket, Rhode Island, this year marked 10 years participation in the School Club Roundup, sponsored each year by the Council for the Advancement of Amateur Radio in the New York City Schools, the ARRL and its Hudson Division Education Task Force. The idea behind the event is to foster contacts with and among school radio clubs. Principal Bob Jones, WB1P--with help from several members of the Blackstone Valley Amateur Radio Club--set up a station in the school's library for the event, February 12-16.--Rick Fairweather, K1KYI

* The 1996 AMSAT Annual Meeting and Space Symposium is November 8-10, at the Holiday Inn, City Center, Tucson, Arizona. The symposium has issued its first call to authors who wish to submit papers for this event. The scope of the papers should be on topics of interest to the amateur satellite service. The symposium organizers also are soliciting topics from the AMSAT community. Abstracts from authors should be submitted by June 15, 1996. Final versions of all papers should be received by August 15, 1996. Submissions and inquiries go to Dave Burnett, WD8KRV, 4809 E Pima, No. 223, Tucson, AZ 85712; e-mail wd8krv@amsat.org.--AMSAT News Service

I just wondered, David, how many names do you now have on your list
of people who don't see your point of view and therefore should not
be on this Earth .... and whether or not *YOU'VE* signed the petition
to ban handguns?

Please tell me if *I'm* on your hit list - if so I will buy myself a
bullet-proof jacket.

I went to the Cambridge rally yesterday.

If anybody knows the identity of the man who put a top-band AM
transmitter on the bring-and-buy stall, I would like to talk with
him. The B&B organisers seemed a vit vague, and had no way of
calling him back to discuss a deal.

And this from someone who has the temerity to criticise someone else's
spelling?

Why is it that all over this flame war, there are lots of
painfully inept postings from Mr. Arundel? To my view, it's coming
perilously close to time for a mail to postmaster@ccub.wlv.ac.uk

FCC OKAYS OLYMPIC CALL SIGNS FOR HAMS OPERATING IN GEORGIA

Hams operating within the state of Georgia may use special call signs from
April 15 until August 31, 1996, to commemorate the 1996 Olympics, under a

Special Temporary Authority issued by the FCC. Here's how it works: An FCC-licensed radio amateur operating in Georgia with a "4" in his or her call sign may replace that number with "96" (representing the year) or "26" (commemorating the 26th Olympiad) during the period of the STA. Hams with any number in their call signs and operating within the State of Georgia may add "00" to the existing number (to mark the centennial year of the Olympic Games). So, WA4BKD in Georgia also could identify as WA96BKD, WA26BKD or WA400BKD, while NG3K, when operating in Georgia, could identify only as NG300K or as NG3K. The Olympics start in July. The STA stemmed from an initiative by James Altman, N4UCK, of Atlanta and the Georgia Amateur Radio Operators Group he organized, with the support of ARRL.

FCC: INTERFERENCE PROBLEMS OFTEN START AT THE FACTORY

The FCC says it cannot resolve most of the thousands of complaints of interference to TVs, radios, stereos and televisions "because the cause of this interference is the design or construction of these products and not a violation of any FCC rule." The FCC points out that basic consumer information concerning interference solutions now is available on the Internet through the FCC Compliance and Information Bureau's home page at http://www.fcc.gov/Bureaus/Compliance/WWW. The list also is available through the Commission's Fax on Demand service at 202-418-2830. Request document 6904.

The basic information includes the CIB Interference Handbook and the CIB Telephone Interference Bulletin, among others. The Telephone Interference Bulletin states: "Interference occurs when your telephone instrument fails to 'block out' a nearby radio communication. Potential interference problems begin when the telephone is built at the factory." The Interference Handbook includes a list of equipment manufacturers who provide specific assistance with interference problems. "Involving dealers and manufacturers in the resolution process should give them knowledge of the problems and provide both the opportunity and incentive to protect their products through customer service," the FCC said in a recent Public Notice.

The Commission emphasized, however, that its Compliance and Information Bureau "will continue to take appropriate enforcement action where it has been determined that the interference is caused by violations of the Communications Act or the Commission's rules or policies."--FCC

FCC SUSPENDS LOUISIANA HAM'S LICENSE, MULLS FINE

The FCC has suspended the Technician Plus license of Irvin J. Foret Jr, KB5UJD, of Metairie, Louisiana, after receiving numerous complaints about interference to Amateur Radio operations in the New Orleans area. The action came April 5, 1996 after Commission personnel monitored and documented Foret's transmissions in December 1995 and January 1996. The FCC said some of Foret's transmissions on January 29, 1996, "constituted willful or malicious interference to the transmissions of other Amateur Radio stations," in apparent violation of FCC rules.

The FCC also contended that, during an inspection of his station, Foret "was lacking in candor and misrepresented material facts" to Commission personnel by stating that he did not make the transmissions the Commission observed. The FCC also said some of Foret's transmissions were unidentified, included music or were obscene or indecent, the alleged indecent transmissions occurring at a time when there was a reasonable risk that children were in the audience.

The FCC suspended Foret's license for two years, and ordered a final determination based on the issues in the case and whether to impose a fine against Foret. If he files a timely request for a hearing or a written statement, the suspension of his operator license will be held in abeyance pending a Commission decision. Otherwise, the suspension order takes effect within 30 days of his receipt of the FCC's order.--FCC

FCC BUSTS WASHINGTON HAM BACK TO NOVICE CLASS

Arthur P. Baumgarden of Bingen, Washington, won't be KI7CW much longer. In a case that hinged in part on Baumgarden's claimed driving skill, the FCC concluded that he obtained his Advanced class license improperly and refused to review that decision. Baumgarden, 62, said he successfully upgraded to Advanced during a 1991 test session in Carson, California, a round trip of more than 2000 miles from his home. According to the FCC, however, he later told a Commission informant that he obtained his upgrade "through payment of money, without passing the required examinations." When the FCC questioned Baumgarden, he denied the allegations. The FCC asked Baumgarden to take the test again under another Volunteer Examination team, but he refused and appealed.

FCC records indicate that Baumgarden changed his story after the FCC first took issue with his version of events and especially with the travel times he supplied. In part, the Commission expressed disbelief that Baumgarden could have driven to Carson, California, and back in the times he claimed and called the alleged travel schedule "impossible to achieve within the speed limit." Baumgarden said he made the journey in his RV. The fact that Baumgarden later changed his story "damages rather than enhances his credibility, the FCC said." The Commission also noted that Baumgarden failed to corroborate his tale or to adequately explain why he provided two versions of events.

Although Baumgarden continues to deny he obtained his amateur license improperly, the FCC concluded on March 18, 1996, that "his denials are not credible" and refused to review the case on both procedural and substantive grounds. The Commission ordered that because Baumgarden declined to appear for retesting, his operator license would be reduced to Novice and his call sign changed to one appropriate for that license class.--FCC

HAM RADIO TWINS TO APPEAR ON TURNING POINT

Twin brothers Keith Heitzmann, KK5FE, and Jake Hellbach, KK5HY, will appear on the ABC Television news magazine Turning Point May 3. Jake and Keith, who live in Louisiana, were put up for adoption at birth. Adopted by different families, they lived only 15 miles apart, unknown to each other, until they

met for the first time some 15 years ago at the home of Keith's adoptive parents. "As you can imagine, it was a very emotional meeting," Jake said. The brothers have been part of the Minnesota twin study that is looking into genetic versus environmental influences on separated twins.

Jake reports the two studied together, passed their Technician tests at the same session, and later upgraded to General and Advanced about the same time. Both work in the computer field and used to work for the same company, which led to lots of confusion, Jake said.

Among other things, the Turning Point crew shot film of the pair attending the Lafayette (Louisiana) Hamfest. "You get some pretty good prices when a television camera is over your shoulder!" said Jake. Of all the film that was shot, Jake said he hopes the program uses at least some of him and his brother on the radio. "I was glad that when it was my turn, I contacted a fellow in Cuba, so at least there was some DX on that night," he said.

HAM RADIO HAS PART IN NATIONAL MUSICAL ARTS EVENT

Amateur Radio will play a role at a musical and historical event April 12-14 at the National Academy of Sciences in Washington, DC. Special event station W3A starts operation at 0000 April 13 and continues for the next 48 hours. Run by members of the Potomac Valley Amateur Radio Club, W3A plans to operate 47 kHz up from band edges.

The event is in conjunction with National Musical Arts end-of-the-season concert, "Radio and Music," set for April 14. The concert commemorates the 95th anniversary of Gugliemo Marconi's first transatlantic radio transmission and the 70th anniversary of NBC. The musical program includes the work "Radio Music," by John Cage, as well as compositions by Paul Schonfield and Peter Schickele, otherwise known as P.D.Q. Bach.

Leonard Schachter, N3RPQ, has loaned part of his vintage radio collection for the presentation of "Radio Music," to be performed by Schickele, Nobel laureate Joseph H. Taylor Jr and National Academy of Sciences President Bruce M. Alberts. Frank Turano, KA3GAL, will display Marconi memorabilia, including a magnetic detector, spark transmitter, receiver and telegraph key. Representatives of the ARRL will host an informational Amateur Radio exhibit during the event.

THIS WEEK IN AMATEUR RADIO DOWN BUT NOT OUT

This Week in Amateur Radio, a three-year-old weekly audio news magazine service, is once again off the satellite airwaves. The program, produced in Albany, New York, by Community Video Associates Inc., had been piggybacking for the past several weeks on the Tech Talk Network, uplinked via Skyvision on Telesat Canada Anik E2. When Tech Talk Network dissolved earlier this month, TWIAR was back to square one, explained Stephan Anderman, WA3RKB, the executive producer. "Needless to say, we are very discouraged," Anderman said, adding that he'd hoped the arrangement to use Anik E2 would give the program a C-band home for several years to come.

The demise of Tech Talk Network also put the Houston AMSAT Net off the air, AMSAT reports.

Eleventh-hour efforts to secure transponder space for TWIAR on Anik E2 failed, Anderman said. He and the others involved with the service are seeking a new satellite home. "Discussions with other satellite carriers for the donation or lease of satellite space continue in earnest," he said in a letter to affiliates. TWIAR relies on donations from Amateur Radio clubs and individuals to meet production and transmission expenses.

Last fall, the program went dark as a result of the shutdown of Telstar 302. TWIAR averages 75 minutes of news, carries ARRL and RAC bulletins, contest and convention information and propagation forecasts, as well as offerings from the Radio Amateur Information Network and Amateur Radio Newsline. The program was fed to over 100 nets and repeaters throughout North America every Saturday at 8 PM. TWIAR continues to be heard locally in the Albany area on the WA2OQE repeater (145.33 MHz) and on the "Gateway 160 Meter Net" (1860 kHz) from WA0RCR. The Houston AMSAT Net also will air on the Gateway net.

OL' SOL MAINTAINS A SPOTLESS REPUTATION

>From solar observer Tad Cook, KT7H, in Seattle, Washington, comes the now-familiar word that solar activity remains very low. The sunspot count was zero on March 30 and 31. Over the next few weeks, Cook says we can expect solar flux to remain near 70, with possible mild geomagnetic disturbances centered around April 17. On the air, 20 meters should be the best daytime band, but solar activity is expected to be too low to sustain much propagation on 15 meters or above. For worldwide communication at night, 40 meters is the top choice, but the low solar activity makes this the best time of the solar cycle for 160 meters, too.

The latest projections, based on current conditions and previous solar cycles, suggest that we will be at the sunspot number minimum for the next few months. The minimum is centered around April through June of this year, with sunspot numbers in February 1997 reaching fall 1995 levels. Previous forecasts have mentioned a 10.7-cm solar flux minimum centered around spring of 1997, but the latest projection moves that period up a bit. What it shows is a minimum based on an average flux of 72 for October 1996 through February 1997, with the flux also averaging 72 for June 1996.

Spring of 1998 should present a radically different picture. By then, the average flux will climb toward 100, and 10, 12 and 15 meters should be alive with activity again. By April 1999, the average solar flux is projected to be 158, rising to 192 a year later! The next cycle is projected to peak near the turn of the century--in August 2000.

ARRL WRC-99 CONFERENCE PREPARATORY COMMITTEE APPOINTED

ARRL President Rod Stafford, KB6ZV, has appointed the members of a committee to advise the Board of Directors on policies for the 1999 World Radiocommunication Conference (WRC-99). The Board established the committee at its 1996 Annual Meeting, and set its first task as defining the process by which membership input should be solicited and the opinions of the

membership objectively determined.

The ARRL WRC-99 Committee is chaired by Dakota Division Director Tod Olson. K0TO. Also named to the committee were First Vice President Steve Mendelsohn, WA2DHF; Midwest Division Director Lew Gordon, K4VX; Southwestern Director Fried Heyn, WA6WZO; Northwestern Division Vice Director Greg Milnes, W7AGQ; ARRL members Ken Kopp, K0PP, of Anaconda, Montana, Tuck Miller, KC6ZEC, of San Diego, California, and Glen Whitehouse, K1GW, of Amherst, New Hampshire; and ARRL Executive Vice President David Sumner, K1ZZ.

The committee is expected to complete its work by mid-December 1996.

AMATEUR RADIO GOES TO GRAD SCHOOL

Graduate student Bella Romain, N4ILQ, of Carrollton, Georgia, has a healthy curiosity. For a while now, she's been wondering what makes hams willingly go out of their way to help during emergencies. Combining avocation and academe, Bella has made that question the focus of her master's degree thesis in psychology at West Georgia College in Carrollton. "The fact that the FCC mentions public service as part of the reason for Amateur Radio's existence is obviously not the whole story," she said. "It is not easy to leave the comfort and security of a warm bed to drive out into a storm to help set up an emergency shelter."

A ham for more than 25 years, Bella speaks from some experience. Since she and her husband, Stewart, KF4WC, moved to Carrollton 13 years ago, they have become active in the public service sphere of Amateur Radio. They took a first-responder course, as well as numerous Red Cross disaster-training classes "so that if we are in the field providing emergency communications, we will be better prepared to handle any kind of emergency," she explained. She reports her Amateur Radio club, the West Georgia Amateur Radio Society, works closely with emergency-management agencies, the Red Cross, and the National Weather Service "as the need arises." Club members worked with the Red Cross to provide damage assessments and communication following Hurricane Opal. They also helped with emergency shelter operations.

Bella says it's not easy to endure the tedium of long hours at an emergency communication headquarters, nor to give up leisurely weekends and evenings to take courses to be better prepared for emergencies. She says she began to wonder "what hams experience and feel during the times they participate in providing emergency help, and what some of their thoughts and reasons were for doing this." To find out, as part of the information-gathering phase of her research project, Bella is asking hams to fill out a questionnaire. She'll then select a number of hams for in-depth follow-up interviews. Among other things, the questionnaire delves into respondents' emergency communication experiences and asks them to rate both their level of personal comfort and personal safety while responding during an emergency.

For more information, or to obtain a copy of the survey to complete, contact Bella Romain, N4ILQ, 285 Timber Ridge Trail, Carrollton, GA 30117-8884; tel 770-834-5674; fax 770-830-9481 or e-mail bella@mindspring.com.

LONG-DISTANCE RESCUE MISSION SUCCESSFUL

Collins enthusiast Bob Karon, AA6RK, of Encino, California, was checking out some repairs and modifications to his vintage gear around midnight March 18 when a routine evening of radio suddenly turned dramatic. While working a Florida station using his Collins setup, Karon heard the distress call from the 44-foot Canadian yacht Cambria, which had run aground and was sinking in the Caribbean Sea, some 150 miles southwest of Jamaica. "The signal was weak and fading," Karon reports. "I had to hold my breath sometimes to hear it." The Cambria's skipper, Kenneth Cunningham, told Karon the vessel was almost on its side and the antenna nearly in the water. When Karon discerned the vessel's position, he telephoned the US Coast Guard. The Coast Guard could not hear the Cambria's weak signal, but was able to contact a merchant vessel 25 miles away from the distressed craft. Karon, a freelance musician, stayed on the air for the next three hours, the only connection between the merchant ship and the Cambria. "I reassured the panicky crew that help was on the way and relayed instructions from the Coast Guard and the rescue ship," he said. The merchant ship eventually was able to dispatch a lifeboat to the Cambria and rescued all four crew members. Captain Robert C. Gravino, chief of the US Coast Guard's Search and Rescue Branch, cited Karon for "professional and humanitarian actions assisting mariners in distress. A job well done."--Harvey Laidman, N6HL

13-YEAR-OLD HAM HANDLES EMERGENCY RESPONSE

Vince Bernotas III, N2WXE, an active member of Burlington County (New Jersey) ARES/RACES, turned out to be in the right place at the right time on March 17, and a dirt-bike racer is glad he was. Vince, 13, and his parents were among those helping to provide communication for the 1996 Sandy Lane Motorcycle Enduro, a 100-mile dirt bike endurance race through the South Jersey pine barrens. After an Enduro rider hit a tree a mile from Vince's checkpoint, N2WXE assisted in locating the paralyzed rider, believed to have a fractured back, then coordinated response of an ambulance and emergency vehicles, including a rescue helicopter. Complicating matters was a catastrophic radio failure in both the ambulance and state police cruiser. Amateur Radio saved the day when N2WXE forwarded urgent information about the patient's location and condition to net control Doug McCray, K2QWQ, who relayed the vital information to dispatchers. The rider is reported to be recovering. An active ARRL member since he got his ticket three years ago, Vince is net control for the K2AA/South Jersey Radio Association's Hams R Us Kids Net (see QST Nov 94, p 69).--Vince Bernotas II, N2WXF

"STEPS TOWARD MORE PERFECT COMMUNICATION" EXHIBIT TO OPEN

The story of Arthur Collins, W0CXX, and the Collins Radio Company is one of genius, vision, dedication and hard work--an inspiration for anyone with an interest in radio and electronics. Starting May 4, the public will be able to get a better understanding of the man, his company and accomplishments through an exhibit, "Steps Toward More Prefect Communication," at the Linn County History Center in Cedar Rapids, Iowa, where Collins was headquartered. The exhibit will point up the value of Collins Radio Company and Art Collins to the local area and the world between 1923 and 1969. The exhibit is designed to impart to visitors--especially youth--a sense of the

values and tenacity Art Collins exemplified, and how--through hard work and application of knowledge--dreams can be realized.

Photographs, print materials, equipment displays, audio recordings of historic radio transmissions and other historical memorabilia will tell the Collins story, which is broken down into several exhibit topics. These include Teenage Wizard, 1925-1930; A Business from a Hobby, 1931-1933; Radios for Soldiers: World War II; Post-War Diversification (which chronicle the company's Amateur Radio, broadcasting, avionics, military and computer efforts); To the Moon in a Volkswagen and The Legacy Lives On.

The exhibit draws on the resources of retired Collins Radio Company and Rockwell Collins employees, the Collins Museum at the Rockwell Collins facilities in Cedar Rapids, The Collins Collectors Association, The Cedar Valley Amateur Radio Club, the Collins Amateur Radio Club and the book, The First Fifty Years, by Ken C. Braband.

The exhibit draws its name from a statement by Art Collins, then age 16, in Radio Age magazine for May, 1926:

The real thrill in amateur work comes not from talking to stations in distant lands, nor from receiving multitudes of QSL cards from all the world, although these are things to stir your imagination, but from knowing that by careful and painstaking work and by diligent and systematic study, you have been able to accomplish some feat or establish some fact that is a new step toward more perfect communication.

The Linn County History Center is at 101 Eighth Ave SE, Cedar Rapids. The exhibit will remain open 10 AM to 4 PM Tuesdays through Saturdays until February 15, 1997.--Rod Blocksome, K0DAS

MILTON E. CHAFFEE, W1EFW, SK

Past New England Division Director Milton E. Chaffee, W1EFW, of Southington, Connecticut, died April 8, 1996. Milt was 83. He served as director from 1957 through 1964. Milt was a long-time ARRL member and official, and served in many League capacities, including assistant section manager and section traffic manager in Connecticut. He was an active CW and traffic enthusiast. He also served on the QCWA board of directors.

Connecticut Section Manager Betsey Doane, K1EIC, called Milt's passing "the end of an era." ARRL Executive Vice President David Sumner, K1ZZ, added: "Milt was a stalwart traffic handler who set and maintained the standards for the rest of us for more than 40 years."

A memorial service for Milt Chaffee was held April 14 in Southington, Connecticut.

IN BRIEF:

* A special event station to mark the first anniversary of the bombing of the Murrah Federal Building will be put on the air by the Oklahoma City Autopatch Association, in cooperation with the Salvation Army. The station,

N5FM, will take to the air at 9:02 CDT on Friday, April 19, 1996, and stay on the air at least for the next 24 hours. The initial operating frequency will be 3900 kHz. Activity will move to other bands as conditions require or permit. N5FM will transmit a packet message from the bombing survivors association to the citizens of the world at 9:03 CDT.--Thomas M. Webb, WA9AFM (PIC, Oklahoma Section)

* Astronaut Shannon Lucid is now a member of the Mir crew for the next four months. The Russians have approved her use of the Mir radio on 2 meters, with the call sign R0MIR. Look for her on 145.55 MHz, FM simplex. Dave Larsen, N6JLH, is now the US QSL manager only for current R0MIR and R0MIR-1 contacts. QSLs must include date, time, and mode. N6JLH will not handle SWL reports. For contacts with the Mir packet radio personal message system, include the message number issued by the PMS on the QSL card. QSLs must be sent along with a business-sized sase. (A "green stamp" to cover postage also would be appreciated.) QSLs should be sent to: N6JLH, PO Box 1501, Pine Grove, CA 95665. QSLs for previous Mir contacts may be sent to: RV3DR, Chief of Cosmonaut Amateur Radio Department, NPO Energia, PO 141070, Box 73, Kaliningrad, 10 City, Moscow Area, Russia.--AMSAT SAREX bulletin; Space News

* The president of the Israel Amateur Radio Club, Joseph Obstfeld, 4X6KJ, visited ARRL Headquarters on April 1. During his stay, he and ARRL Executive Vice President Dave Sumner, K1ZZ, discussed the upcoming IARU Region 1 Conference, which will be hosted by the Israel Amateur Radio Club in Tel Aviv the week of September 30, 1996.

* A special event station, OEM1M, to commemorate International Marconi Day will be in operation April 20, 000-2400 UTC on SSB, CW and via Amateur Radio satellite (OSCAR 10 and 13 preferred). OEM1M will operate from the Radio Austria International broadcasting center in Vienna. Hams can register for a contact with OEM1M via e-mail at info@rai.pin.at or http://www.ping.at/rai/ on the World Wide Web. Then, during the three live broadcasts of RAI's Shortwave-Panorama program that day (at 0905, 1205 and 1605 UTC), hams on the list will be invited to call OEM1M immediately on a given ham radio frequency. The program will relay the transmissions to its worldwide shortwave audience. A special QSL is available for QSOs.--RAI

* RF Design magazine has moved its offices. The new phone number 303-793-0448, and the new address is 5660 Greenwood Plaza Blvd, Suite 350, Englewood, CO 80111. Editor Gary Breed, K9AY, has departed the magazine to become president of Noble Publishing in Atlanta, Georgia.

* Pupils at Leo A. Savoie Elementary School in Woonsocket, Rhode Island, this year marked 10 years participation in the School Club Roundup, sponsored each year by the Council for the Advancement of Amateur Radio in the New York City Schools, the ARRL and its Hudson Division Education Task Force. The idea behind the event is to foster contacts with and among school radio clubs. Principal Bob Jones, WB1P--with help from several members of the Blackstone Valley Amateur Radio Club--set up a station in the school's library for the event, February 12-16.--Rick Fairweather, K1KYI

* The 1996 AMSAT Annual Meeting and Space Symposium is November 8-10, at the Holiday Inn, City Center, Tucson, Arizona. The symposium has issued its first call to authors who wish to submit papers for this event. The scope of the papers should be on topics of interest to the amateur satellite service. The symposium organizers also are soliciting topics from the AMSAT community. Abstracts from authors should be submitted by June 15, 1996. Final versions of all papers should be received by August 15, 1996. Submissions and inquiries go to Dave Burnett, WD8KRV, 4809 E Pima, No. 223, Tucson, AZ 85712; e-mail wd8krv@amsat.org.--AMSAT News Service

>Without trying to start yet another thread on the relative merits of
>code, does anyone here have any practical suggestions for getting past a
>wall I've hit? For whatever psychological or brain-wiring reasons, I
>have not been able to improve much beyond 11 wpm for about 2 weeks now,
>after a steep initial learning curve. I need to test at 13 wpm by May
>20, and would like to be at 15 wpm at least. Any suggestions appreciated.
>Thanks!

That's normal, Jay. This is the traditional "plateau" where the brain
runs out of horsepower to do conscious translation and you have to
develop the reflex of automatic translation at a subconscious level.
The only way to do that is drill, drill, drill at speeds higher than
you can comfortably copy. One day you'll suddenly find you can copy
well above the plateau with no discernable step in between. That's
when the reflex is fully formed and kicks in. It takes some people
a week or two to break through, others take months. Hopefully you
won't be one of the latter.

Don't fret that you're stalled, it happens to everyone. Set your
practice speed at 15 WPM and copy what you can. Don't worry about
missed letters, just keep copying. You *will* break through.

>>operation; and should be tested as such.
>>
>It has been reported on this forum more than once that about half of the QSO's
>currently found on the HF frequencies are CW.

Let us consider that these reports have been posted by those who are in favour of continued Morse code testing is not all that surprising these postings appear from time to time. Usually the methodolgy used is to gradually scan the bands starting from the bottom of the bands and then seeing and counting the various modes that are demodulated. Of course, the biggest problem, even if this methodolgy was valid, is that it would only be true for that band, at that time of day at that location. But more to the point, the fact that the frequencies were not scanned randomly, as required for any accpeptable sampling, shows that the conclusions drawn from these surveys are not unsupportable. Considering that amateurs are concerned in determining the true state of the amateur service allocation, their determination of that state should not be founded on information that is biased, and self-serving, let alone demonstrably and scientifically proven to be false.

>So, how do you reason that
>MF/HF CW (OOK Morse) is an obsolete mode?

Considering that so few other services use the Morse code, everything from airliners, space missions and taxi drivers use it would be a fairly good indication as to the obsolecense of this mode of communications.

>Is it just because you want it to be,

No.

>or that economics (unique skills are expensive!) have forced its demise from
>some sectors to be replaced by digital gimmickry with dubious >reliability?

A leading question, but I will attempt to answer it, none the less. Since it is cheaper to use digital communications than Morse code, as already presumed by the question, it would only follow that Morse code would be abandoned for digital communications. Even if it were gimmickry and not as reliable, since it is cheaper and faster, there is no doubt that the conversion to digital methods in the maritime mobile service

will continue apace.

>Why do we still hear commercial 500KHz stations on CW?

These stations are still heard on CW because GMDSS for the maritime mobile service is still in its transition phase, ending 31 Jan 99. Until such time, those convention ships equipped under the previous SOLAS (Safety of Life at Sea) agreement may continue to do so until that date. In which case, they will have no choice but to convert. (Considering that most, if not all non-convention ships do not carry Morse code, this is likely to have little effect upon them.)

I don't think that there is any clearer example of when I visitied Canada's East Coast MF/HF radiocommunications facitily VCF in 1979. At that time, they had 14 CW positions conintually manned. I understand that they now have one position, and Transport has dropped Morse code training for their operators since September 1994. When GMDSS is implimented, they will be all gone.

>Has the false economy
>been exposed?

Not in the least. It is false hope to believe that Morse code will continue to be used for distress and safety.

>Inquiring minds want to know.
>

OK, I have told you. But I am sure that the facts will not change your mind.

>
>Please help, I am really excited about having the time to get on HF now...

Mike, you've probably pinpointed the problem, coupling between the antenna and the AC wiring in the attic. You need a choke in the AC cords to limit RF access into the affected equipment. You can use toroids or ferrite bars. Just wind several turns of the power cord around or through your ferrites. In some cases bypass capacitors can help too, disc ceramics of about 0.001 uf with a 600 working volt rating will do. (There is potential danger here, and UL may not approve, so use capacitors with caution on AC wiring.) Note, you can also use the cores of flyback transformers salvaged from junk TVs as your forms if you don't have any ferrite bars or toroids.

Now such filters can help, sometimes enough to make the symptoms go away, but a better course is to eliminate the problem at its source, IE get the antenna away from the power wiring. It often doesn't take a lot of distance to make a large improvement. If it isn't already, mount the antenna at the very peak of the attic, as far from the AC wiring as possible. If you can, orient the antenna so that it runs perpendicular to AC wires instead of parallel to them (this can be hard to arrange). Best, of course, is to get the antenna outside and as high as possible.

The FCC prints a pamphlet on RFI causes and cures, but it isn't very technical, oriented more toward the consumer. A better book on RFI causes and cures is offered by the ARRL.

5395. Re: Code speed wall solution?

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-15 00:00:00 UTC
From: hayward@cs.uchicago.edu
Message-ID: <Dpwu5q.F0y@midway.uchicago.edu>
Source record: 227694

In article <4krqgi$da4@shiva.usa.net> jay@earth.usa.net (Jay Huldeen) writes:
:Without trying to start yet another thread on the relative merits of
:code, does anyone here have any practical suggestions for getting past a
:wall I've hit? For whatever psychological or brain-wiring reasons, I
:have not been able to improve much beyond 11 wpm for about 2 weeks now,
:after a steep initial learning curve. I need to test at 13 wpm by May
:20, and would like to be at 15 wpm at least. Any suggestions appreciated.
:Thanks!
:

Jay, it is pretty sad isn't it when, for fear of opening up a
long interchange on the merits of code, someone has to begin a
legitimate question as you have.

Could you imagine having to preface the same question if you asked it
at Field day or at a club meeting.

Anyway, I found the best way to get around walls (mountains in my
case) was to maximize quality of the time I was spending learning
code. I had found that my attention span was wandering during code
practice, and, as you well know, as soon as that happens, you skip one
letter, then a word, and then become frustrated.

I decided to break my codfe practice into 6 minute sections several
times a day (six minutes was the amount of time I seemed to be able to
maintain good attention). After the six minutes were up I stopped,
even if I was doing well.

Another thing I did was to do some of the six minute sessions at a
much higher rate of speed (i.e., not just one or two words/minute
more). During that period, I just tried to go with the flow of the
code, writing down as many letters as I could, and not being concerned
with missing any. If later that ay I dropped back to my target speed,
it actually seemed slower :)

Good luck!

5396. Transportable Mobile Phone

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-15 00:00:00 UTC
From: nenad@noel.cs.rice.edu
Message-ID: <4ktrgk$cl4@larry.rice.edu>
Source record: 227695

About a week ago I posted a request for help/info on the equipment needed to establish mobile telephone service via radio. Thanks to all who responded to my message.

In the meantime, I've managed to locate the exact product that is being used for this purpose (at least in Yugoslavia). It is made by Senao International Co. from Hong Kong. The product in question is Transportable Mobile Phone SN-568. The picture and detailed specs can be found at

http://www.senao.com/products/sn568.html

The important details (I think) are:

Base Station Transportable unit
A. Transmitter
- Transmitting Frequency: 380MHz 254MHz
- RF Power: 25W 10W/20W
B. Receiver
- Receiving Frequency: 254MHz 380MHz

The claim is that the communication range is 60-90km in the open area.

Is it possible to buy this product in the US? (Yes, I am trying to contact the manufacturer directly.) Would such a device be legal in the US? If so, are there similar products from other manufacturers?

Thanks again.

Hi Zack, the overwhelming majority of hams can't copy 30 wpm by any means.
We are talking about *entry level* requirements. How fair would it be to
require someone to hit a home run before he/she is allowed to swing the bat?

Source record: 227697

*** HAMFEST June 8th - Minneapolis area ***

The fifth annual Tailgate Swapfest will be held on Saturday, June 8th, from 7:30 AM to 1 PM at the Honeywell parking lot located at Stinson Avenue exit of I-35 in NE Minneapolis. This event is sponsored by the TwinsLAN ARC and will be the ONLY hamfest in June in the Minneapolis/St. Paul area.

This is a really fun hamfest as it is easy to be a seller - just park your car and open the trunk!

Drop me e-mail for more info.

Yeah! Try sending it in to the repair shop. If you just bought it,
return it and get a more durable (not to mention CHEAPLY MADE) radio
like an Icom or Kenwood.

Just my humble opinion based on past experience with Alincos.

73's for now, my friends!

From: sysop@pyromania.com
Message-ID: <HAM-MISC.B042@pyromania.com>
Source record: 227500

Well....I just spent the last two months learning and passing the 5 wpm and 13 wpm code tests. I am now preparing for the General and Advanced written exams. (I am amazed at all the flamming in this newsgroup so please forgive me if this is a serious posting!)

I am now looking to get my HF rig...and wonder if any advice regarding all the bells and whistles is worth the extra money (speech processors, 100 memories, auto tuner, etc)? These bells and whistles increase the price about $400 (for the rigs I am looking at).

Also..living in Amarillo, Texas...not much of a yard (and neighborhood restrictions)
and wonder if a
vertical antenna will give me any good DX (am considering Cushcraft Ap8A).

Any advice on the above and regarding a first time set-up would be appreciated.

Don't be too sure. Back in the 1950s, even ordinary TV sets cost around
$700; that's several thousand in 1990s dollars. Even today, lots and lots
of people fork over $2k - $3K for big screen TVs. I even saw an 80 inch
set for over $8000 (awe inspiring experience!). Never underestimate the
value people place on entertainment.

Three is such a ticket as the "Codeless" General. It is really classified as a
"Conditional" ticket. The VE is required to accept the FCC 610 Form when
properly completed by a physicain attesting to the handicapped condition which
precludes an aplicant from successfully completing the exam requirements. ARRL
policy to VE teams is to accept the application and submit any suspicions
concerning the validity of the situation with the rest of the test package
when returned.

VE 's are NOT authorized to create any special requirements contrary to
current regulations. Prior to the inception of the VE program , I was an FCC
authorized exam proctor. I have given special Braile written tests and I have
used lights and vibratory gear to acertain code ability. Yes the FCC district
office reccommended these practices prior to the implementation of the VE
Program.

In the last 15 years I have only seen one physician's certificate and it was quite valid. I
participate in the monthly exams given on the third Monday's of the month at
the Indian Valley Public Library in Telford Pa (Just wanted to get a plug :-))

>know...

And it'll also probably convince you that you need to use a typewriter
to copy higher speed code. (Which requires another conditioning process
to make fingering the keyboard a reflex when you hear the code element
sound.) As my friend who does flawless copy of stuff that sounds like
a twittering tone to me says, "It isn't copy until it is on the paper."

I agree with Jim. Having operated portable DU, and having met many of
the hams there, there's little doubt it's a postal problem, not an
operator problem. If they get the QSLs, they answer them. This does
not equate to the situation in the states where QSLs, postage, and
heartfelt pleas are ignored by some -- actually, many -- ops. I had
better returns from the ex-Soviet Union than I've had from 160 meter
and 2-meter QSLing efforts. Alas!

> ^^^

=====
Since this is a blatant advertisement, I'd like to add my two cents
(which is porbably all its worth). There are other callsign CD Roms
out there, and the best, and most accurate, is the product offered by
the traditional callbooks (The Flying Horses). The quality of ham
radio programs and misc. files on the other disks is minimal,
although Buckmaster makes an effort. If you really want the most
accurate foreign and stateside address info, get the callbooks on
disk. A glance at these CD-Roms that boast all this great ham radio
material has proven to be disappointing. It's mostly pure tosh, junk
thrown in to fill up the disk. Buyer beware!!

Which I'm sure that they did, but that best possible price recently
increased 50% (and the postal rate is higher for magazines in baggies).
Now they either stop using the bags, or pass the extra costs along to
us as a dues increase. I think that they did the right thing.

>Plastic bags at additional charge can be nixxed too
>since we received our magazines in wrappers for all of those years at no
>additional cost--it was built in to the dues structure. It's not
>as if we'd be getting something extra, we're now NOT getting something we
>already had.

There you go again, wanting to raise *my* dues because you're having
a delivery problem. Of course the wrapper costs were incorporated into
the dues, and we'd have to have a dues increase to keep putting them
in wrappers because those costs have increased, so the League decided
to avoid that dues increase by doing away with the baggie. Most members
seem to still be getting the magazine intact each month, so it was a
good decision. What about that don't you comprehend?

Nathan Ryan Gingras wrote the quoted material below:

" I don't think the hams will be sad to see you go, but that's because you
" think for yourself... noone wants that in ham radio!

I could never understand why people spent all this money just to talk
around the world to someone about their antennas. Though, I must say
that the shorter range VHF bands seemed to be populated more by people
who genuinely enjoyed conversation. But, this may vary from region to
region.

A3 - [Tonga] From 3 to 8 of May , Michael (DF8AN) should be active from

Tonga.Activity on 40, 15 and 6 mtrs CW (QRP 5 Watt).

CT1_dip - [Portugal] A group of CT operators plans to be QRV from the Aveiro

Lighthouse (DFP Ref. FBL-001) and from some Islands in the Beira

Litoral group.The callsigns should be homecall/p.More info soon !

CT8_dfp - [Portugal] The CT1FMX dxpedition to "Ponta da Piedade" LightHouse

was changed for the period 24 to 26 of May.Call stills CT8FMX.

On the return , CT1FMX expects to activate "Forte do Pessegueiro"

(Ref. DCFP F-042)

CU4_dfp - [Azores] CU4AH will sign portable from "Ponta Barca" Lighthouse (DFP FAZ-003) located in the Graciosa Island (DIP AZ-004). Starting 3rd of May for three days. Frequencies : 14180, 14260, 7060, 3680, 3790.

EK - [Armenia] Victor ,RV6HKB/EK, will be QRV from Armenia for 1 year. He will be on 15, 20 and 40 meters with a dipole and 100 Watts.

F_iota - [Noirmoutier EU-064] F/ON5UP/P is active until April 20th from Noirmoutier Island (IOTA EU-064). Every day from 7 to 9 UTC on 7.030 Mhz.

GJ_iota - [Les Minquiers EU-099] Jim (G3RTE) and Phil (G3SWH) will be Les Minquiers Plateau (EU-099) with calls GJ3RTE/P (SSB) and GJ3SWH/P (CW).They plan to have two stations running at same time. QRV from June 28th to July 1st.

GM_iota - [Benbecula EU-010] From 23 to 30 of July , Ken (G0PCA), Eileen (G0PCB), Ian (G0MIF), Stuart (G7JYF), Kurt (G7NCV), Debbie (G7UWH) and Katie (2E1DQA) will be active from Benbecula, Outer Hebrides IOTA EU-010 with the call GM0PC.

HC8 - [Galapagos] Starting April 21st to May 10th , DF1VU ,DL4VCG and DK5VP will sign portable HC8 (e.g. DF1VU/HC8) using 700 W and two Yagis.QRV from 10 to 40 meters between 14 and 18 UTC.

HH_iota - [Ile a Vache NA-149] HH6JH is living in this Island.He is QRV at sundays on 14.260 Mhz.QSL via home call.

HI - [Dominican Rep.] K9LTN/HI9 (Bob) is active until the end of April. He is QRV in all bands , SSB + CW.

J6, J7 - [Dominica & St.Lucia] During April , F5JYD will be in Dominica and St. Lucia where he plans to be QRV.

JA6_iota- [Tsushima AS-036] In the last week of April , JA6WIE will be QRV from Tsushima Island (IOTA AS-036) , also from this group , 5 to 7 of May JR0GFM will be QRV.

KH4 - [Midway] NH6D/KH4 (Bill) will be active again for two weeks from

Midway (Top #1 in the Portuguese Most-Wanted).

SV5_iota- [Kalymnos & Telendos & Leros EU-001] From May 25th to June 14th, Fred, SV5/SM7DAY/QRP.Activity only on 17 and 20 mtrs CW.

TJ - [Cameroon] Two US operators will be QRV using call TJ1GB. SSB + CW QSL via WA6SLO.

UA_ant - [Antartic] Starting July , RU1ZC will be in SAAM Mirny (Antartic Base WABA UA-07) for three months, as R1ANZ.QSL via RU1ZC.

V7_iota - [Marshall Isl.] From 2 to 14 of May , WW1V (Bob) will be in Kwajalein Atoll (IOTA OC-028) as V73W.

VE_IOTA - [Seal NA-126] Some operators of the Montreal West Island Amateur Radio Club plan to be active , July 25th to August 1st, from Seal Island (IOTA NA-126).Some VHF activity , see below !

VK_iota - [Croker IOTA New-one] The VK8NSB activity from Crocker Island was changed the period 8 to 14 of August.

VK9_iota- [Saumarez Reef OC New-one] VK4FW/9 (Bill) is going to Saumarez Reef , New one for IOTA , from 27 to 28 of April.

VK9_wpx - [Norfolk] Jim (VK9NS) and Kirsty (VK9NL) will use the special calls VI9NS and VI9NL during the 75th Anniversary of the "Royal Australian Air Force".

VP8_sg - [South Georgia] Reg (VP8BPZ/GW8VHI/DA4RG) plans to be active from South Georgia during is Dxpedition to the Falklands (11-May to 11-September).

VP9 - [Bermuda] From 9 to 15 of June , N1LJA/VP9 (Paul) will be QRV on 10 to 40 mtrs.

W6_iota - [San Miguel NA-144] Jim (KG6VI), Steve (N6WKU), John (KO6TN), Frank (N6RNX) and other operators will be active from San Miguel Island (IOTA NA-144).They will be there from 26 to 29 July , also for the IOTA Contest.

YB8_iota- [Tongian OC New-one] John , YB5NOF , will be at Tongian Island on April 26th.The callsign is going to be YB5NOF/8.

ZB2 - [Gibraltar] ZB2/DL7CM (Hans) and ZB2/DL1BX will be active from 10

to 20 of May.Also until 1st of May ZB2FX (G3RFX) , QSL to H.C.

7X_iota - [Algeria] Possible operation of W3GF from two new Refs for IOTA.

(24 to 27 of April)

8P - [Barbados] From April 24th to May 6th , DJ1TO (Bernd), DL7UTO

(Baerbel) will sign 8P9IR and 8P9IU.

8Q - [Maldives] From September 8th to 22nd , Andy (G4VPM) will sign

8Q7PM.

9K_iota - [Persian Gulf Group AS-118] Dave (KA5TQF) will be on Kuwait until

May as 9K5/KA5TQF.It is possible that he operates from IOTA AS-118

group on April 25th.

9L - [Sierra Leone] Starting May/June , Paul (9L1PG) and Millie (9L1MG)

will be QRV from Sierra Lione.QSL via NW8F.

9M2_iota- [Pinang state Group AS-015] From April 23rd to May 5th , Steve

G4JVG/P29DX will be QRV from Pinang State group (IOTA AS-015).

He will sign 9M2/G4JVG

=== * VHF * ===

VA7 - [Canada] The Mountain DX Club of Port Coquitlam is preparing a DX

expedition the 8,000 ft peak of Blackcomb Mtn (at Whistler ,

British Colombia) for the CQ WW VHF Contest this year.

They plan to be QRV on 6 mtrs , 2 mtrs and 70 cm running 100 W and

longboom yagis.The grid square is CO80 .The callsing will be , if

approved , VA7SKI .If the callsign is not approved they will use

VE7VDX.Any more information , skeds request ... to Scott Leaf :

ve7zvz@dowco.com (Internet email).

VE_IOTA - [Seal NA-126] Some Trans-atlantic QSOs are expected in the 2 mtrs

band (144.020 and 144.030 Mhz). [More info on VHF]

NPDXG Bulletin #16 [2/3]

NPDXG Portuguese edition -> The last numbers of our bulletin were not

translated to Portuguese due to an health problem of Pedro CT1FUF.
The Paper version is being prepared and delivered at time but the digital version is not.We hope Pedro gets better soon and that the bulletin starts to be translated to our mother language for CT and PY readers.
First year of NPDXG activity -> Our DX group is making it's first year ,next April 25th.We expect our work to help the DX comunity was useful , some of our activities were :
- DXpedition to Insua Island , IOTA EU-150
- DXpedition to Morraceira Island , DIP BL-013
- DXpedition to Culatra Island , IOTA EU-145
- Colaboration in some CO (Cuba) Dxpeditions by, CT1EEB and CT1ESO.
- Participation in several DX contests in HF and VHF (By our VHF group)
- Activation of some "rare" QTH Locators for VHF-hunters.
- Edition of an regular DX information Bulletin in Portuguese and English, with an paper version for those without packet radio or Internet account.
- Instalation of the 2nd DX Cluster node in Portugal linked to the European Packet Cluster Network.The call is CS1NDX-5 and it's working in our Club. Thanks to CT1EKF and NPDXG members in Oliveira de Azemeis for their help, also to CT4KQ.
- Cooperation with some magazines and RadioAmateur Clubs and Associations.
- Organization of meetings between DX'ers in CT-land , especially in the Aveiro District.
We hope to organize even more events. All this for a better hobby, HamRadio!
73's to our readers ...
9K5 Prefix -> From April 7th to May 7th , Kuwait operators are allowed to use this prefix.A special QSL card will be used for this event.

5418. FS: Yaesu FT-530 HT & Accessories

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-16 00:00:00 UTC
From: rh18@crux4.cit.cornell.edu
Message-ID: <4l0q6l$gnk@tuba.cit.cornell.edu>
Source record: 227560
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have for sale my Yaesu FT-530 dual band HT and accompanying accessories. I bought the rig about a month ago, and now decided that I need to get a higher powered base unit. The HT is in PERFECT, like new condition as it has had about 5 hours of use total. I paid the following prices for the unit (new):

(1) Yaesu FT-530 $329
(2) Service Manual $ 20
(3) MH-29 Display Spkr Mic $100
(4) CSC-56 Soft Carry Case $ 23
(5) E-DC-5 Cigarette Adapter $ 26
==========
Total: $498

Considering that the equipment is essentially new, Ill sell the package to the first offer of $399. Ill pay fed-ex shipping overnight to anyone in the US. If you think that this is an unfair price, let me know and we can discuss it.

Thanks,
Ravi Hariprasad

>73,
>Jonathan

Jonathan, this is as good a place as any to ask that sort of question.
Just ignore those who'll heckle you for asking beginner level questions.
They are so senile they can't remember when they were beginners. :-)

I don't know of any good online theory tutorials, I'm afraid you're
going to have to do it the old fashioned way and read a book. One
book every ham will profit from owning is the ARRL Handbook. It has
a theory section in the front. It's a bit terse, and not pitched at
precisely the right level for you, but it is a start. From the nature
of your questions, you need something pitched along the lines of
"Mr. Tompkins Meets the Electron", but I don't know of any current
books pitched at that level. Perhaps someone else can recomend some.

Lets give a start to answering your first 3 questions and see how
that goes. An LC network is a combination of inductors (coils)
which are called 'L' in the jargon of the trade, and capacitors,
called 'C'. Now complex circuits can have many Ls and Cs forming
a network, but the simplest LC network consists of a single coil
and a single capacitor. The *topology* (how they are connected)
of such a LC network can take one of two forms. The parts can
either be connected in series or parallel. Each of those circuits
will have a different behavior when excited by an AC voltage.

Before we can describe that behavior we have to bring in another
concept called *reactance*. Crudely, reactance is how hard a
coil or capacitor tries to prevent an AC current from flowing
through it. You can think of it in similar terms to how you
think of resistance in a DC circuit. But there's a big difference,
the amount of reactance a given value coil or capacitor has
varies with *frequency*. A coil's reactance increases as
frequency increases while a capacitor's reactance decreases

as frequency increases. Their behavior is the inverse of each other. And, this is important, the value of their reactances have *opposite signs*. By convention, we assign a negative sign to capacitive reactance. (I won't burden you with the formulas for calculating reactance, they're in the Handbook.)

Now for any given pair of Ls and Cs, there will be one frequency where the absolute value of their individual reactances are *equal*. This is called the *resonant frequency* of the circuit. For a series LC circuit, the reactance of the two parts sums to *zero* at this frequency and the circuit behaves as if it were a perfect conductor with regard to current flow at that frequency. At other frequencies, the reactances aren't equal, and the reactance of the circuit will be larger (and getting larger as frequency decreases thanks to the capacitor, and larger as the frequency increases thanks to the inductor). So we have a *tuned circuit* that will pass a desired frequency, but block (to lesser or greater degree) all other frequencies. In other words we have a bandpass filter.

The other topology we can use is to place the parts in parallel. The behavior of this circuit is just the opposite of the series circuit. It will oppose currents at the resonant frequency very strongly, and pass those at other frequencies. In other words, we have a bandstop filter.

These filtering actions can then be used in more complex circuits to get a desired behavior, but that's another topic.

Ok, so much for an introduction to LC circuits, lets talk for a moment about *impedance*. I'll assume you already understand *resistance* (but I'll go through that if you don't). And I've just introduced you to *reactance*. Ok, well in real circuits there is always some of each present. That combination is called *impedance*. Resistance is always *dissipative*, IE it absorbs power and turns it into another form of energy (usually, but not always, into heat). Reactance is *never* dissipative in that sense. Disregarding for the moment losses due to flux leakage and dielectric stress, reactive components always return to the circuit any energy put into them after a certain time delay which is related to the *phase* of the AC signal. (I won't go into *why* they do that here, but will if you ask.)

Anyway, resistance is represented as a *real number* while reactance is represented as an *imaginary number*. (Note, there's nothing imaginary about reactance, that's just a mathematical term.) So when you combine resistance and reactance to form impedance, you have to use complex arithmetic. In rectangular form, impedance looks like R+jX, where R is the resistance component and X is the reactive component and j is a mathematical notation letting us know the term with which it is associated is imaginary.

Now we can use impedance in formulas just as we can use reactance or resistance, we just have to remember to apply the rules of complex arithmetic when we do. So the familiar Ohm's Law I=E/R is also true for reactance, I=E/X, or for an impedance, I=E/Z. We'll find that for resistance our answer comes out on the real number line while for reactance it comes out on the imaginary line, and for impedances it becomes a vector on the real/imaginary plane. The form I've shown is called rectangular form. There is another form we often use called the polar form which is related to the rectangular form by trigonometry so that the magnitude of the vector and its angle from the origin define the impedance. This form is often shown graphically (with the addition of some other factors which don't concern us here) as the Smith Chart. The Smith Chart is handy for solving all sorts of *matching* problems (I'm *not* getting into that here today).

Ok, now lets look at *loading*. To do that, we have to introduce another idea called 'Q'. Q is the quality factor of a circuit. It is expressed thus, Q=X/R (for the series form) or Q=R/X (for the parallel form), so it is the ratio of reactance and resistance in a circuit. When we increase the loading on a LC circuit, we increase R (or decrease R depending on circuit topology). This lowers the Q. Now another way to express Q is Q=Fo/Fbw%. What this says is that Q is the ratio of the operating frequency to the percentage bandwidth of the circuit. In other words, how wide the passband of the circuit is. So increasing the loading in a LC circuit will broaden the frequency response of the circuit (in relative terms, there's more to it we don't need to know at this point).

Now that's not all it does in some topologies. Another use for LC circuits is to act as impedance matching networks. Now I promised not to go into that, but I'll say that such matching circuits can be visualized as a transformer with certain frequency dependent features. When we increase the loading with such a circuit, we effectively change the transformer ratio so that the load resistance looks like a different resistance to the source. In the most common matching network topology, this will result in the source supplying more power to the load. So we say we are "loading down the source" in much the same manner as when we put a load in a truck we are loading down the engine as the truck tries to move the greater mass. We can also go too far, and overload the source, in which case we get less power out (in our truck analogy, the engine may stall, or move the truck more slowly). When we load the source just the right amount, we get maximum power out (or maximum ton/miles moved in our truck analogy), and the load is said to be *matched* to the source. So we can use the term "loading" in conjunction with adjusting a matching network.

Okay, that's a start. Now was that at the right level, or do you require more or less detail? I warn you, ASCII art and ASCII calculus expressions are not pretty. To get

across some concepts we need both. Trying to describe some
of this stuff without being able to draw pictures and write
out equations is tough. I'm willing to Email Mathcad files
if that's the level needed.

Straining the brain, I seem to recall that dipper uses the Hartley
circuit. So the third wire connection is to a tap near one end of
the coil for feedback excitation. Memory could be faulty, but I
also recall that the highest frequency "coil" is just a loop of
heavy wire formed from a piece of wire about 6 inches long and
plugged into only the two outside pins of the socket. Feedback
in that case must be by circuit strays. I had one of these many
years ago, but sold it and bought a solid state version, a Heath,
a long time ago.

>concerning the validity of the situation with the rest of the test package
>when returned.

No. The Conditional license was a full General exam, but taken by
mail (with a volunteer examiner) back when the FCC was still doing
the exams. You qualified to take the Conditional exam by living more
than 150 miles from an FCC examining point. The Conditional license
was discontinued when the VE program was instituted since examination
by volunteers then became the norm. And in a sense all licenses since
have been "Conditional". The name stemmed fron the fact that you were
subject to being called before the FCC and retested at any time in order
to determine if your exam had been valid. Licensees who took their
tests before the FCC weren't subject to this recall.

The waivered licensee today is treated no differently by the FCC
than any other licensee of the same class, IE *any* of them can be
recalled to be retested if there is any suspicion of impropriety.

Everything looks fine, so I guess your reader is OK!

ER> Also, I realize it's probably an over-posted subject, but I have a few
ER>comments about the no-code stuff...

<snipped to save bandwidth>

Sorry, friend, but I refuse to get into the Code-vs-NoCode debate...
doesn't matter to me one way or the other. All I can say is that as I
have no HF equipment (due to a skinny wallet) and thus am not able to
send as well as receive. Rather than sit around going crying the
blues, I will simply wait until I can actually *use* code before I
try to upgrade (cuz code tapes are no substitute for actual
practice). Until then, I will use as much of my Tech+ priviledges as
I can - which, for now, amounts to 2m. (I could get upset about it,
but why put my rump thru a ringer over it? That's life, ya know.)

So why, you ask, did I put out all that effort for the sake of
Element 1A? Cuz (at least for now) it's part of going Up The Ladder.
Besides, 10 years is a long time... you never know when money might
fall in your lap! :)

"But seriously?" Was your tuning knob on your radio broken? There is only one repeater around here on which I have heard such problems, and n-1 on which I have not. If you ever come back here and bring your radio, try Catalina (147.090+ AA6DP), Pasadena (145.180- 156.7 W6MPH), or Mt. Disappointment (145.300- K6CPT). This is just a small list of general coverage open repeaters in the 2m band in the LA area. And, by the way, I have included the call signs. In my experience, I have noticed that hams tend to OVER-identify, much more than once per ten minutes and at the end of the QSO.

>I shut my radio off until we left later that week.
Sad, really sad..

The only thing sad is that you didn't try ANY other frequencies when you were here. But then it's more fun to complain than to try to improve the situation yourself.).

Ah yes! GOLF makes much more sense. Or fishing ... Or stamp collecting ...
Or ... Well, you get the idea (maybe). People create "hobbies" because they
find something in them that's interesting. In Ham Radio, there are several
"subsets" (if you will), or specialties that allow for a wide range of varied
interests. Yes, some would just buy the most expensive (Japanese made BTW),
radios, put up an antenna tower and antenna, and "chew the rag" with someone
equally boring half-way around the world. If that's what they find to be fun,
then more power to them. Others find that *experimentation* (and Ham Radio is
one of the last areas of technology where that can still be found), in the
radio frequencies is fun ... and educational ... and perhaps career oriented.

There's lots more that Hams do ... for fun ... for the sake of having a hobby,
and for, yes, the benefit of their fellow human beings. I refer to those who
are engaged in the "SKYWARN" activities in states where severe weather can
threaten life and property ... Or those who provide emergency communication
when even cellaphone sites are rendered inoperative (such as happened in the
last big quake in southern California). There are some who attend and provide
communication - free communication I might add - to charity "Walk-a-Thons" and
other large-scale public events where *paid-for* communicators are out of the
question.

I've tried to live my life looking at the people around me as being of some
interest ... regardless of their chosen life style or hobby or vocation.
It never ceases to amaze me that people can sit back and "knock" something
for no other reason than just to say "Look at me! Ain't I smart by putting
these people down!?" Unless of course ... that's your hobby.

What ever turns you on ...

Jim Kehler (pacrimgolf@saba.kuentos.guam.net) wrote:
: Which brings up a good question, something I have wondered about for
: years. Why is it that we 'hams', most of us being employed in fields
: other than electronics design, and few of us being capable of building
: our own equipment, think that the first thing we should do with a new
: $2000.00 radio that was designed and manufactured by professionals, is
: to open the cover and MODIFY it so that it works better ?

Because hams tend to be "tinkerers", and in fact the idea of
experimentation is intrinsic to the idea of the Amateur Radio Service.

The good folks at Icom, Kenwood, Ten-Tec, Yaesu (or insert your
favorite brand) certainly do employ "professionals", but they also
design to a mass market and a competitive price point. In that effort
they make certain design decisions (which are right from their end)
but which I may decide do not meet my specific desires.

NM3P, in another post, suggests that most of the requests for
modification may be from what I'll loosely call "rascals" without
honorable intent. There may be some of that, and I suppose when I
modified my first 1949 Ford for "better takeoff" I probably was a
bit of a "rascal", but I learned a lot about V8 engines in the
process!

Personally, I am delighted when I find someone willing to "look
under the hood" of their new radio, because it suggests one less
member of the QCAO (Quarter Century Appliance Operators) club!

Cleaning my hard drive, I found the following old gem, author
unknown, but suspected to be Danny, K7SS.

WARNING:
WARNING: Humor impaired individuals should skip to the next
WARNING: message to avoid undue elevation of blood pressure.
WARNING:

NOTICE:
NOTICE: Those who oppose modification of factory built
NOTICE: radios may find this organization of interest.
NOTICE:
- - - - - - - - - - -
The Quarter Century Appliance Operators was founded in the early
1950's by a small group of Amateur Radio operators from the Pacific
Northwest. They had been active in their hobby for over 25 years,
yet still lacked the basic knowledge of radio electronics and had
no idea of how their equipment worked.
They banded together to try and protect each others honor and
pride. At radio gatherings and club meetings in the 1950s one was
considered unworthy of the name Ham Radio Operator if he or she
couldn't not only name components, but know how to solder them
together and make a radio work!
When faced with insults and derision, those few hardy pioneers
banded together and formed the First Chapter and National
Organization of the QCAO. This was known as the "Cold Solder"
Chapter.
They even coined the now-famous club byword
"e pluribus ignoramae" which is Latin for "We don't have to know
how to solder, we just wanna talk on our radios."
No veterans of that first chapter are known to be active on
the air today. In the late 1950s and early '60s, with the worldwide
interest in science and space and technology, the QCAO membership
went underground.
It is with great pride and dignity that today in the 1990s
the revived QCAO stands ready to rise from the ashes, and become
the standard of mediocrity it once proudly was. In honor of
those first pioneering members, QCAO hereby invites all eligible
applicants to step forward and join!
The benefits of QCAO include not only the pride of membership.
Think of the warm glow you will feel at club meetings and gatherings
showing off your new all-plastic imprinted QCAO pocket protector!
And that's not all! For your minimal membership fee, you will also
receive a handsome, suitable-for-framing, certificate of honor,

with hand-lettered name and Charter Membership Number. Other QCAO memorabilia will soon be available for members, including T-shirts, caps, pins, etc. At this date charter membership numbers are still available.
Membership requires a 25 years (more or less) interest in Amateur Radio, coupled with a basic ignorance of how radios work and how to repair them.
Think of meeting other QCAO members on the air! No more embarrassing pauses when someone in the QSO mentions an RF choke or a parasitic bleeder...Be able to exchange meaningful sharing, talk about real things, yes, even swap QCAO numbers with each other! And soon perhaps . . . a worldwide QCAO contest!
You no longer have to shrink to the back of the room at post-meeting sessions of your radio club. Just display your QCAO protector and others will be able to identify you immediately. Who knows? Perhaps one of the originals from that old QCAO Chapter is just waiting for you to find him. Join now! Remember "We don't have to know how to solder, we just wanna talk on our radios"! Don't let technoids embarrass you and kick jargon in your face. Stand up for what's right! Join QCAO!
"e pluribus ignoramae"

I gather from your call that you perhaps are temporarily in
Japan, where english-fluent Elmers may be in short supply.

Here are some thoughts.

First, I would be delighted if this newsgroup saw more of the
kinds of questions you have, but I'm not aware of what the
"charter" here is. Seems to me that those questions, and the
answers, would be a good educational service of the newsgroup.

Second, get a copy of the ARRL Handbook (yes, the big thick
$38.00 guy). Despite it imposing appearance, it does a good
treatment of the "basics" in an understandable manner.

Third, feel free to e-mail me your questions directly if you
don't want to expose the whole newgroup to this material. I
can't promise real speedy service, but I'll be happy to help.

lines ???
>What are the typical cures for this ??? Is there a book on RFI, ie.,
like the
>Antenna book or handbook ??? Any other tests to try to diagnose the problem
???>Please help, I am really excited about having the time to get on HF now...

Hi Mike,
When faced with RFI I like to investigate One thing first. Is it antenna radiation causing the problem or feed line radiation. First check the VSWR of the antenna and make sure its below 1.5 to 1. A high VSWR causes voltage and current hot spots on the line which can radiate.

If it is below 1.5 to 1, disconnect the feedline at the antenna and connect it to a dummy load. Normally, the RFI will go away with this test. All dummy loading the line does is make sure the line is OK. Remember, a low VSWR at the TX does not insure a matched system. It just means current and voltage are in phase at that point. In a matched system, the current and voltage will be in-phase all along the line.

Next, I like to run all my balanced antennas with coax and 1:1 baluns at the antenna. If the antenna is resonant and a balun is used, the feedline should not be radiating. In this case the your only alternative is to move the antenna farther away from the AC wiring or orienting it as close to 90 deg. off of any wiring in the same plane.

Its surprising how much RFI can be cured by dealing with feedline radiation.

The problem may occur at night, when some migratory species fly, or in bad weather, ie low ceiling. I remember being in contact with a ham on VHF several years ago who was on duty at a commercial VHF TV transmitter site when a flock of birds began to ram his tower. For a few minutes birds fell from the sky all around his position. It was quite impressive and unusual according to the ham. I don't know of any other instances since then.

My dictionary say obsolete is "fallen into disuse". My point was is that
CW has not fallen into disuse, to the contrary has experienced some what
of a revival on the Ham bands with the "FISTS" promotion and the "no-code"
hubbub.

>: or that economics (unique skills are expensive!) have forced its demise from

Being the most simple, it is probably the easiest to learn and certainly
the easiest to implement of the digital modes. And again, if one ventures
forth on HF frequencies he should be equipped to deal with the second most
popular mode there, particulary when it meets the KISS principles.

>

Can someone tell me how I can start getting involved in amateur radio?
I am interested a lot in the technical aspects of the hobby.
Once, a long time ago, I worked with AM and FM (504kHz-1500kHz,
88MhZ-108Mhz) equipment. I would like to start all over again but this
time get a license etc. Is there a book to guide me thriugh what's
available out there?

Thanks,
John.

>SPECIALISED mode which is part of this extensive hobby?
>
>The first Real Ham I met (an uncle of a school friend) didn't use a microphone
>unless he really HAD to. He was 99% into SSTV.
>
There is nothing wrong with SSTV or any other mode. As a facet(mode) CW
due to its popularity on HF, its being the simpliest of the digital modes
to learn and operate, its tradition, its pervasiveness, its universality, etc.
ranks right up there with SSB or AM as a very large "facet". Because of the
size of the facet, it is important that one who ventures forth on the HF freq.
be competent with the mode. The US FCC chose to add incentive to CW
proficiency by making it a separate "pass-fail" part of the General and Extra
class license which is required here for HF access. There are "conditional"
provisions for those who are not able to learn the Morse due to physical
limitations. So what do you see wrong with that? Most of the grumbling
here seems to stem from the incentive goads built in to the US Amateur
licensing.

By the way, it seems to me that Packet has seen its zenith on HF as a useful
mode. From the reports I read, Packet on HF has not met expectations,
some of which has to do with misunderstanding HF propagation, which can lead.
There are certainly other more robust point-to-point digital modes
that can outperform packet on HF.

Once upon a time, Mr. D wrote 10 lines on the subject: Are telephone
DTMF the same as our DTMF>; here's some of it:

>Are the telephone DTMF codes the same as the ones we use for hamming?
>I thought maybe an easy way to add DTMF to a radio would be one of those
>portable tone dialers.

Yep. The same. There are some level and distortion questions in
your idea that need to be addressed, but it does work. RS used to
sell a small DTMF encoder that could be used just like that. Old
timers used to use the Touch-tone pad from a telephone to add DTMF
to a rig not already equipped.

Now, for one free ticket, who can tell us what the letters A B C D
on your pad were labelled on the military TT pads, and (yep, it's a
two-parter) what did those abbreviations mean?

The appropriate use of expletives in many cases shows a greater
understanding of
culture and language.

I once was employed by an oil exploration firm working in the
South Pacific. A Scot engineer on the crew, when asked what the matter was,
would almost invariably reply, "THE F*CKING F*CKERS F*CKED !"

He was a most endearing fellow, well educated (see qoute), and could
fix almost any mechanical problem that arose. His economy of words
in explaining the problem to us, curious crew members well versed
in such terms, made him quite efficient too.

5450. Bay Area stations needed for international contest

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-16 00:00:00 UTC
From: pwinter@shellx.best.com
Message-ID: <4l1gaj$fus@shellx.best.com>
Source record: 227592
Cross-posted to: sbay.hams,rec.radio.amateur.misc,su.org.ham-radio

[A small addition to the following information from W6RGG: The WRTC teams will be using special callsigns, but the host's callsign will be mentioned on the QSL cards. So hams all over the world will know about your generosity!]

The WORLD RADIOSPORT TEAM CHAMPIONSHIP-96 (WRTC-96) will be held in the greater San Francisco Bay area during July 1996, under the auspices of WORLD RADIOSPORT TEAM CHAMPIONSHIP 96, INC. This message is an urgent request for Bay area station owners to help make WRTC-96 the success we wish it to be, by volunteering your station for use during the competition.

The first WORLD RADIOSPORT TEAM CHAMPIONSHIP was held in Seattle, WA in 1990, in conjunction with the GOODWILL GAMES, and this year's event is intended to foster goodwill around the world through Amateur Radio.

During the the WRTC-96 competition there will be 52 two-operator teams from the U.S., and around the world, operating CW and SSB during the IARU Radiosport contest, July 13-14, 1996 on 40 thru 10 meters, from existing stations located in the general area of the flatlands surrounding San Francisco Bay. Participants will be providing their own equipment, and the power output is limited to 100W.

WRTC-96, Inc is looking for approximately 75 stations in this area, to be used as a pool for placing these 52 operating teams. Volunteer station owners are being asked to make their station available to a team from noon on Friday July 12, to 1:00 AM on Sunday July 14. The actual contest period will be from 5:00 AM to 11:00 PM, July 13.

Station owners will become a part of the extended WRTC family, and will have the opportunity not only of hosting one of the top contesting teams from around the world, but also of joining in some of the parties and informal get-togethers included in this historic gathering of the world's best contesters.

The ideal station will have a tri-band yagi at 40 to 50 feet, and a wire dipole for 40 meters, and will be located in the flatlands around San Francisco bay. The competitiors will provide their station equipment; two 100W transceivers, earphones, microphones, keyers, computers, antenna switches,

etc., and the station owner will be asked only to provide the
place from which to operate. Call signs to be used by the
competitors, as well as licensing for overseas operators,
will be administered by the WRTC-96, Inc. organization, and
will not be an issue for station owners.

From the stations which are volunteered for use for WRTC-96, we
will select 52 which are as nearly alike as possible for the
competitors to operate. If your station is equipped with a
tri-band yagi at around 40 to 50 feet, and you have an existing
40 meter wire dipole, or room for one to be installed for the
competition (or you know of someone with such a station), and
would like to participate as a host-station for WRTC-96, please
contact me immediately.

I can be reached via e-mail at wsixrgg@crl.com, or on
packet at W6RGG@N6QMY, or on the DXPSN.

Thank you and 73,

Bob Vallio, W6RGG
For WRTC-96, Inc.

helps you, whoever you are!

oS (Duplex separation (offset)
tc Transmit subaudible tone (CTCSS on transmit.. to activate many
repeaters)
rc Recieve subaudible tone (CTCSS on recieve, so that you can let the
repeater tone, rather than signal strength, unsquelch you)
Sr frequency step in scanning mode... I set mine at 5)
Sc Scan resume... settings are cr (carrier drops and scan delay finishes)
ti (resume in ten
seconds, no matter what)
SE (don't resume
scanning once stopped)
Sd scan delay time, in seconds
S1 Lower scan limit for "F-scan"
S2 Upper scan limit for "F-scan"
"F-scan means hold the F(unction) key (above PTT) while pressing
one of
the two scanning buttons (* or #). An "ordnary" scan scans the
whole
range.... at least in VF mode)
ud scan direction for vacant channels.
PS Power Save duty cycle.. the radio turns off, and then on briefly to
see
if there is any action... this repeats to save power.
tE Transimt inhibit (I like to think of it as Transmit Enable, but then
the on/off
is backwards.
to Transmit time-out. Radio stops transimtting after this time elapses
so
you don't time out a repeater. 2 min (120 sec) is max, I'd prefer
3.
Lb Priority frequency channel lookback time. You can listen to one
frequency, while every so often (chosen here) the radio scans the
three priority channels.
Ar Touch tone auto reply... The radio has touch tone squelch, so you
can have the radio wait for a DTMF sequence before it comes alive.
When it recieves this sequence, it can send back an "acknowlege"
Dunno what to use it for, though.

One other thing that belongs here, but isn't. To change the speed of
the DTMF tones (from fast to slow, or v.v.) press the PTT switch while
pressing D, then press 0. It means you have to transmit to do this,

which
is dumb... and it is an oddball way to change a setting. Oh well...

> If you want to get on packet, go packet. If you want the 'Net, log-on.

Gee. That sure is funny. If this is the case, then why are there groups of hams who are devoting - in some cases - ENTIRE STATIONS to the world of TCP/IP?!?!?

If this is the case, then we *really* don't need the AMPRnet then. Now do we?!?!?

What you just said above Jeff is a TOTAL slap in the face to those who are working HARD to make the AMPRnet a REALITY!!!! I speak as someone who has spent time on the AMPRnet, and have made some very interesting contacts via the CONVERS bridge.

Somebody feel free to correct me if I'm mis-reading the above quoted message.

73's for now, my friends!

>From January 12th, 1986 until now I have worked 47,816 stations on HF.

what's that? about 14 stations a day for 10 years or so? all different? it's unusual to keep qsl'ing skeds..

>From that total, 14,255 stations are from the U.S., leaving a total
>of 33,561 non U.S. stations. If I sent everyone I worked a QSL card,
>at my expense, the postage would be (using old postage costs):
>
>U.S. 14,255 @ $0.28 = $ 3,991.40
>Non U.S. 33,561 @ $0.50 = $16,780.50
>
>For a total of $ 20,771.90 postage. Add the cost of 47,816 envelopes,
>and 47,816 QSL cards. Lets, for argument, say the cards/envelopes
>cost $ 2,300.00. Add that to the postage, and you get ruffly
>$ 24,000.00. Now, do you have $ 24,0000 tied up in your radio
>equipment ? I doubt it. So why should I tie up $ 24,000.00 in awards
>to hang on other people's walls ?

you don't QSL in a lump. you do it continuously. 15 cards a day if we use 32 cents for postage and 18 cents per card for production costs (hi? lo? it's just a number to make the math work out) so that's $7.50 a day.

you might live in a 500,000$ home, but you usually don't pay for one in a lump.

>I never was interested in collecting cards. At first I thought it

so you should tell your contacts you won't QSL instead of also wasting their time and yours later.

Many DON'T have net access nor the inclination to ask for new copies each month (or any one month for that matter). Any organization which buys 130,000 of anything each month should be able to negotiate the best possible price. Plastic bags at additional charge can be nixxed too since we received our magazines in wrappers for all of those years at no additional cost--it was built in to the dues structure. It's not as if we'd be getting something extra, we're now NOT getting something we already had.

I've found that Canadian members are now receiving their issues in plastic bags again due to complaints. Foreign clubs are also receiving their copies in plastic bags.

The most commons method of getting past the "wall" you described (which is a natural happening for those who take CW seriously - there is another at about 18 WPM - part of why the exams are at 13 and 20 WPM) is to start copying at a speed beyond that threshold. If your "wall" is at 11 WPM, start copying at 15 - if you seem to top out at 18, try copying at 22 WPM. This is the most effective method for those who I know who have developed a high level of CW proficiency, not from from my own experience!

Hello Jay,

My suggestion is to keep doing what you're doing. I used to listen to
W1AW at a speed just beyond what I could copy, stretching my ability.
Then, test time, 15 wpm will be cake. The fastest I got was 45 wpm,
then I had to move to a smaller lot, and haven't been on the air in
2.5 years!!!

Have fun, and good luck.

Hi Clay (isn't that a type of dirt?? (-:)

OK, I accept 'obsolete' was a bit harsh. I agree CW still has a great deal of merit as a communication mode. I'm a no-code licensee, but I use CW to 'make the grade' when SSB doesn't manage on 6m, 2m & 70cm. I would HATE it if I didn't have that capability to fall back on when packet, FM & SSB can't get through. And I know that if my microphone breaks down I can still bang a couple of wires together. But you know how much chance I have of getting a QSO on 2m CW?? FA. If I call CW on the SSB call freq, at least someone will hear me (if I call long enough and hard enough someone might dust off the dusty old key one shelf (and prob ask me to QSY hi!)).

But to REQUIRE proficiency in CW?? Why not Packet? SSTV? or indeed any other SPECIALISED mode which is part of this extensive hobby?

The first Real Ham I met (an uncle of a school friend) didn't use a microphone unless he really HAD to. He was 99% into SSTV.

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you.

==========
A fully-functional logger for both general purpose logging and contesting called LOGEQF (maybe LOG-EQF) is available for download. At the moment, I don't remember where, but a web search on "EQF" will probably turn it up. (Or e-mail me if you can't find it and I will try to find it.)

It is not perfect, but it will do a lot, and you get to try it free ($30 to register and get extra features). It is a DOS program that will use extended memory only if you have it. I think it would also work in a DOS window under Windows.

5478. ANNOUNCE: MUFsight Propagation Windows Software

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-17 00:00:00 UTC
From: scollin@sapphire.win-uk.net
Message-ID: <77@sapphire.win-uk.net>
Source record: 227448
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

MUFsight is a Windows based HF propagation package that uses the MINIMUF algorithm to plot predicitions on a world map.

Program Highlights

* Microsoft® Windows program. MUFsight is a Windows compatible program that has been developed in C++ using Borland's Object Windows Library for a natural look and feel supporting sophisticated features. It is compatible with both Windows 3.x and Windows 95.

* HF Propagation Prediction. MUFsight implements the much respected MINIMUF algorithm to predict HF radio propagation conditions for anywhere in the world. Frequency range is 1 - 150MHz for full coverage of the HF band even at times of high solar flux.

* Map projections. Predictions can be plotted on either a cylindrical or spherical world map projection as colour coded shading. You can trace values simply by positioning your mouse on the display (lat, long, bearing and great circle path are all traced). Select between MUF and LUF plots from the toolbar.

* Single point predictions. Double-click anywhere on the map for a full 24 hour analysis of MUF and LUF figures for the selected geographical location.

* Home Location. Set your geographical home location simply by entering the latitude and longitude.

* Monitoring Frequency. Choose a monitoring frequency and highlight those parts of the world that should be audible at the current time. The AOR bundled version supports DDE querying of certain AOR RS-232 radio control software to obtain the monitoring frequency without having to type it in. This feature is not available with the standalone version.

* On-line context sensitive help. The full Windows hypertext help system is used to provide you with the information you need wherever you are in the program. In addition to the help menu, all dialogs have a "help" push button which calls up information for that dialog. You can also highlight individual menu options using the arrow keys and obtain help on them by pressing <F1>.

* HF Propagation Working Aid. The G4SGI propagation working aid is included free with the package.

A demo sof te software can be downloaded from my website (URL
below).

If you havn't seen a HDTV demonstration go check one out the picture
is amazing. I watched a demo at the local art muesum, one Japaneese
short showed someone cooking in the kitchen. You could see very fine
detail on the hamburger and other items without really trying, you
could see the small droplets of greese flying off the frying pan. I'd
say it was easily as good if not better than any fine grained 35 mil
photo i've seen.

There is a HDTV newletter available on the WWW. Try www.web-star.com
some stuff is there as well as a full subscription. I don't have any
interest in the company, but the data is there.

ARLX012 N5FM marks anniversary

Special event station to mark Oklahoma City bombing anniversary

A special event station to mark the first anniversary of the bombing of the Murrah Federal Building will take to the air at 9:02 CDT on Friday, April 19, 1996, using the call sign N5FM. It will be operated by the Oklahoma City Autopatch Association, in cooperation with the Salvation Army. N5FM plans to stay on the air for at least 24 hours.

The initial operating frequency will be 3900 kHz. Activity will move to other bands as conditions require or permit. N5FM will transmit a packet message from the bombing survivors association to the citizens of the world Friday, April 19, 1996, at 9:03 CDT.

Yes the old "Conditional" was a General, however when I was a volunteer examiner the 150 mile requirement was deleted. I gave all exam classes and those who successfully passed were issued a ticket with "(C)" next to the class definition.This identified the ticket as "Conditional". With the establishment of the new VE program, the "(C)" was dropped from subsequent tickets. Also the requirement of three examiners came into being. The old program I was part of was specifically for those individuals unable to travel to the FCC Field sites. I would get tests and applications from individuals within a 50 mile radius of my then Northeastern Ohio location. Back in the 70's there were at least three of us volunteers serving the 19th Radio

District out of Detroit. As a result of my participation since 1976 I became enrolled in the ARRL VE program.

Just wanted to post a few more notes on all this. Pete has written in e-mail to confirm that the chokes did indeed cause a high-frequency rolloff at audio frequencies. This means that the filters are affecting the differential AF signal, but without entirely eliminating RF symptoms. This leads to several other aspects of the problem.

First, if air-core coils are too bulky when sufficient inductance is achieved, ferrite rods offer a reasonable alternative. The Amidon 1/2" diameter 61 material rods can be scored and broken into smaller sections, perhaps about 2" long each. With rods, the magnetic circuit is not completed in the core itself, as is the case with toroids. That, in addition to the reduced permeability of this material, should ensure that the inductor will not saturate at audio frequencies.

Also, considering the effects noted above, I think it is more than likely that both differential and common mode currents are involved. For that reason, the differential mode filters should probably be used in addition to the FT-50A-75 toroidal common mode chokes, not as a replacement. In common mode operation, the toroids won't saturate because the magnetic fields tend to cancel in the core, reducing flux to near-zero.

Regarding the use of the inductors as a low-pass filter, I think it needs to be pointed out that selecting component values for a specific frequency may be a futile effort. In order for a Pi-type filter to be effective, it needs to be designed and applied to a circuit in which input and output impedances are known. That's not the case in this application.

To analyze this further, first consider the output impedance of the typical solid-state stereo amplifier. Looking back into the amplifier from the speaker terminals, the output impedance at audio frequencies

is extrememly low, typically between 0.1 and 0.5 ohm. The 4 or 8 ohm rating applied to these amplifiers has nothing to do with the actual output impedance. Rather, it is based primarily on the current capability of the output stages. The load impedance will determine the current drawn at any given drive level, therefore a limit exists regarding load impedance, below which the amplifier components will overheat.

At RF, things are much different. Now, the impedance is determined by several factors that don't come into play at audio frequencies. First, the "hot" speaker terminal draws most of its current through emitter resistors. These resistors are wirewound and will produce considerably more reactance at RF than at AF. In addition, this terminal is the "center" of the differential power amplifier circuitry in DC-coupled amplifiers and it runs through the entire circuit between all the push-pull stages. Eventually, it ends at the low-level differential amplifier stage which is the first stage past the volume and tone controls. This stage is extrememly susceptible to rectification and imbalance in the presence of RF, which accounts for the low frequency "thumping" sound that often accompanies RFI.

All this circuitry is shunted across the hot speaker terminal, bridging the terminal to both B- and B+. This creates a huge amount of shunt capacitance at RF and it is extremely unlikely that this can be accurately accounted for in the design of a tuned RF filter. In addition, this capacitance will probably vary dynamically as the semiconductors conduct more or less with the application of drive.

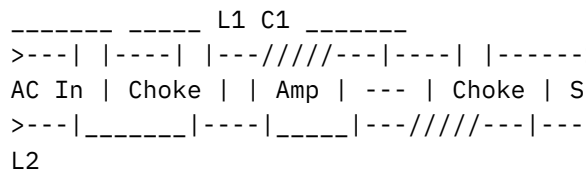
At the other end of the filter, the speaker likewise presents an RF impedance that is difficult to define. Depending on the values of coils, capacitors and speaker voice coils, it can vary widely. In addition, different types of crossover networks use different circuit configurations. For instance, a 12 dB/octave crossover will apply a series coil and shunt capacitor to the woofer, whereas a 6 dB/octave crossover uses only a series coil.

In addition, the speaker cable itself will present a vague impedance for RF. Not only will it have a non-published characteristic impedance, RF current induced on the wires will create SWR. Therefore, the actual RF input impedance of the cable is nearly impossible to deduce.

When all these things are considered, I do not believe that a tuned, low-pass RF filter will operate properly in this circuit. Looking at the filter from a somewhat different perspective, it also seems unlikely that a 0.1 uF capacitor shunted across the output terminals would have a significant impact on differential RF currents, owing to the shunt capacitance within the amplifier itself.

After considering the preceding, I have devised a circuit that I believe is probably the best approach to the problem when simpler measures fail to provide relief. An ASCII representation is shown

below:



In this circuit, the two chokes are simply toroids used for common mode rejection. Either a solid, high-permeability toroid or one of the snap-apart versions can be used. If the material is a very high permeability such as 75 mix, only a few turns through the toroid should be required.

Capacitor C1 may not be required and is intended to be an optional component. Depending on the differential impedance seen by RF at the "speaker side" of L1 and L2, the capacitor may offer considerable reduction, or practically none at all. Its effectiveness will undoubtedly vary more with frequency than calculations based solely on capacitive reactance would suggest. For the initial attempt (if RFI persits without it), I would suggest a 0.1 uF for this capacitor. Relative to frequency, this capacitor will exhibit the following shunt reactance:

5 KHz 20 KHz 1.8 MHz 7 MHz
318 ohms 80 ohms 0.88 ohms 0.23 ohms

L1 and L2 are differential chokes and mutual coupling should be minimized. The schematic shows these in a balanced configuration, but a single inductor may be adequate. I suggest starting with a value of 5 uH each, remembering that for differential currents, the total effective value will be the sum of the value of each choke. 10 uH will exhibit the following series reactance with frequency:

5 KHz 20 KHz 1.8 MHz 7 MHz
0.31 ohms 1.3 ohms 113 ohms 440 ohms

Note that the numbers shown for the inductor will probably horrify a purist. In particular, 1.3 ohms of reactance will significantly degrade the damping factor of the amplifier at 20 KHz. Damping factor is the ratio of load to output impedance. Because the inductors are in series with the output, an amplifier with a damping factor of 16 at that frequency will now exhibit an effective damping factor of approximately 6. However, this effect will be greatly minimized at midrange and bass frequencies, where (in my opinion) it is much more important to maintain a high number.

There will also be a phase shift through the filter network and a rolloff of highs. The former, whatever its audible effect, is inevitable and must be endured in favor of RFI elimination. The latter should be tested and minimized, consistent with adequate reduction in RFI effects. Placing a scope across the speaker terminals (at the speaker) is adequate to provide a general guide.

An audio oscillator will also be required.

Ideally, the values of L1, L2 and C1 should be reduced to a point that barely eliminates RFI. Each time the values are changed, the scope should be disconnected from the speaker for an RFI test. Then, if RFI is absent, the frequency response of the system should be checked at the speaker. Note that frequency response should also be checked at least once at the output of the amplifier, to be certain the amplitude is actually flat entering the network. Due to the extremely low output impedance of the amplifier itself, the filter will have almost no effect on voltage measured directly at the amplifier. Therefore, the filter does not need to be disconnected for this test.

Also, if the chassis of the scope and stereo are both connected to AC ground, the output terminals of the amplifier must be checked for the presence of DC on the speaker terminals (between each terminal and the chassis). Certain amplifiers employ circuitry that floats both speaker leads at a DC reference level. If the amplifier chassis and the scope chassis are tied together through the AC wiring, connecting the ground clip of the scope to either speaker terminal will short the DC voltage to ground and damage the amplifier.

Finally, the audio frequency attenuation of the differential network is partly dependent on the load. Speaker systems employing piezo tweeters or midrange drivers may not behave the same as those with voice coil drivers. This is one more reason why the AF voltage delivered to the speaker system should be checked across the audible range after the filter is installed. If anomalies are found with piezo drivers, juggling the L/C ratio of the filter may be an effective means of flattening the overall reponse of the system.

Note that much of the preceding is for the benefit of audiophiles with golden ears. Although I recommend checking system response after installing any filter, it is unlikely that the average listener will detect undesirable effects from use of the stated values.

73,
Jack WB3U

Aloha,

I'll be relocating back to Colorado soon. Does anyone have the ACTIVE repeater freqs for UHF and VHF that I could get ? I was last out there three years ago, and I found over half of the freqs that I programmed into my SABER where useless. Seems that alot of Freqs are "Taken" but only a few are USED.... (Same problem here in Hawaii ! :>)

Areas Interested in : Denver, Ft. Collins, Vail, Dillon, Colorado Springs, and Estes Park. Also any that has coverage in the Gleenwood springs area ?
Thank You !!

Please respond via E-Mail at : swt@lava.net

>stops the distortion.

Thanks for the feedback, Gary (no pun intended).

Jack, WB3U pointed out that I had a lot more inductance than I thought.
My Autek RF-1 said one thing, the Amidon "AL" value for the toroid I
used said quite another. After more careful listening it turned out I
was clipping highs out of the audio and there was still some distortion,
even with the 5 turns on the cores. Jack speculates the distortion
might be core saturation.

So this is all bad news, as it means the three pole filter isn't going
to do the job for eliminating the RFI on 40 meters and in fact might
not cure it on the higher bands if I adjust the cutoff to not mess up
the audio.

My strategy now is this: air core coils, 4 poles or more, find something
that works very well with one channel, then consider ferrite with a lower
permeability if the size of the coils is an issue. I may have to filter
all five channels (surround sound system) and the minibox I chose looks
like it might get very dense now! Oh, and trust the Amidon charts, not
my Autek for inductance values (darn!). If I get distortion with air
cores I'll try your resistor mod.

One additional question I raised with Jack: If this really is a differential
mode RFI problem, is the stereo receiver's AC line likely to be providing
a return path, and if so, should I try aggressively filtering it?
I could put some very serious filtering in place on the AC feed before
my violin strings sounded like power tools :-)

: Mhz.
<snip>

The band 3500-4000 KHz is amateur in the western hemisphere, but in most of the world only small parts are allocated for amateur use. I haven't any facilities to check just what the various allocations are, but the Deutsche Welle and BBC broadcasts on 3995 amd 3955 KHz are authorized by the radio treaties. Likewise the non-amateur operations in 7100-7300 KHz are in accord with international agreements and are not intruders.

tim-

Please forgive us radio cops. We have good intentions, even though we may sometimes have our facts wrong.

You are right. It would be perfectly legal for a Ham to modify anything he wants for use on the Ham bands. Of course, it has to work right, and not transmit on frequencies outside the band!

What your "self apointed radio cop" must have meant, was that it is not legal to use Ham equipment on frequencies that require type-approved equipment, even though you may have a separate license. Even when you modify commercial equipment for Ham use, its original type-approval may be violated, depending on the nature of the modification.

Do you really want to use your radio for fire control? I think you will find that the fire department would consider you to be an intruder. They might think you were only kidding. Worse, they might believe you were trying to lure firemen into a trap, and send the police with guns drawn. Think about it. A cellular phone is a much better choice in this situation.

Well, let me tell you about my antennas ....

I think the point here is that Mr. Kaye somehow clearly missed the whole point. Some people are cursed with the inability to make the "larger" connection. But that's a problem of vision and understanding and the ability to see or not to see the bigger picture on his part, and has nothing to do with Amateur Radio. If I just want a little conversation, I'll go down to the local coffee house (or bar) thank-you-very-much.

5498. Query: Solve of an exam problem

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-17 00:00:00 UTC
From: Nino Porcino <m.caruso@netline.totobit.it>
Message-ID: <4l31e6$9e8@server-b.cs.interbusiness.it>
Source record: 227468

Someone of you can resolve this problem? It was given at my
ham-radio license exam in april '96 in Italy - Europe.

The problem said:

"A shortcircuited line of impedance Z0 = 50 Ohms, shows an inductive
reactance of Xi = 100 Ohms at lambda = 30 centimeters (0,03 meters).
Calculate the lenght of the line supposing alpha = 0 (percentage of
attenuation)."

I have no idea how to resolve it, so if you have any suggestion
please mail me at m.caruso@netline.totobit.it

Thank you a lot

- Nino

Does anyone here know of a mod for the Kenwood TS440S to make it have true FSK keying for RTTY use. The Hal P38 instruction manual mentions the shift voltage to setup for this radio. In all of the mod articles I have seen there has never been a mention of modifying this radio for FSK use.
Dave

5507. Kenwood TM241A Poor Speaker

Newsgroup: rec.radio.amateur.misc
Date: 1996-04-17 00:00:00 UTC
From: dber@tiac.com
Message-ID: <31744ffa.13176616@news.tiac.net>
Source record: 227506

Hello all,

My TM241A speaker seems somewhat poor when the volume knob is raised above the 50% mark (turning-wise). I get somewhat of a rattle when the volume is high and the speech coming in has any base whatsoever in it. I took off my case cover to the unit to verify that it was not necessarily the speaker vibrating against the case (as I thought) but was just that the speaker was not able to handle higher output without some breakup on base-intensive voice. It get's worse as the volume is increased. I tend to need the volume high since I need to raise the volume above car/road noise. An external speaker seems to work fine, but I would rather not have to use an extra speaker if I don't have to. I listened to another TM241A installed in a friends car and it also exhibited the break-up at higher volumes but not quite as bad. Because of this, I decided not to immediately send it back to Kenwood for "repair" since they may not deem it needs repair (although I find it quite poor). My Yaesu FT10 handheld's audio is far crisper and more powerful even in the car.

My questions are:

(1) Do others notice speaker break-up at higher volume levels?

(2) Is it easy and safe to replace the internal speaker by cutting the wires and wiring a new one. Has anyone done this and what speaker did you use to replace it?

Thanks in advance and take care,

Dave Bernazzani

>>Many DON'T have net access nor the inclination to ask for new copies each
>>month (or any one month for that matter). Any organization which buys
>>130,000 of anything each month should be able to negotiate the best
>>possible price.

well, the squeaky wheel gets the grease...no complaints must mean that
things are running ok, right? if yours is coming in mangled, you need to
complain to the postal service and to the ARRL (to get a replacement at least).
trends are charted and problems that stick up get hammered. but if you
don't point out the problem to those involved, they may never see it.

130,000 of something is chicken feed in the mag business. just this area alone
if it was blanketed would need about a half-million of what ever it was you
wanted to stuff in all those mail boxes. if you just wanted to do the south
county and cover everything, you could probably get by with about 230,000 or so.
maybe as low as 130k if you were picky.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated April 1, 1996 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@lucent.com. Thanks to Dennis Dale and ARRL for providing information.

APRIL

April 14 (Sun), Madison, WI - Madision Area Repeater Assn Swapfest and Computer Fair. Dane County Expo Exhibition Hall. 4 miles west of Hwy 12 & 18 and I-90 interchange. Watch for Rimrock Road exit. Doors open at 8 AM. Admission $6 plus additional parking fee. Kids 10 and under free. Talk-in on 147.15 MHz, PL 123.0 Hz. Info: (608)245-8890.

April 21 (Sun), Arthur, IL - Moultrie ARK. Info: Ralph Zan-cha, WC9V, PO Box 55, Lovington, IL 61937, tel (217)873-5287

April 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

April 28 (Sun), Chicago, IL - Chicago ARA Ham Auction. DeVry Institute of Technology, 3300 N. Campbell Ave. starts at 12 noon. They will auction your electronic goods if you bring them in before noon. All goods subject to 10% dona-tion. If purchased back by the seller, then 5% will be due. All items sold as-is and all sales final. Info, call Dean (708)331-7764 morning or evening, or call George (312)545-3622 daytime.

MAY

May 5 (Sun), Sandwich, IL - DeKalb Hamfest. Sandwich Fair-grounds, intersection of Suydam and Gletty Roads, just north of Rt. 34. Admission $6 at gate, free parking. Talk-in on 146.73 MHz and 146.52 MHz.

May 11 (Sat) - Kankakee Area Radio Society, Peotone, IL. Will County Fairgrounds, I-57 to exit 327 east. Admission $5 at gate, free parking. Kids under 12 free. Info: Willis Bowser, K9IFO, 1210 North Riverside Dr., Momence, IL 60954-3452, tel. 815-472-2079

May 26 (Sun), Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell. 8 AM - 3 PM, setup at 6 AM. Admission $5 at door, free parking. Kids under 12 free. Talk-in 147.225, 444.825. Info, call (312)545-3622 or (312)486-6823.

May 26 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JUNE

June 2 (Sun), Princeton, IL - Starved Rock RC. Bureau County Fairgrounds. Admission $5, free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

June 9 (Sun), Willow Springs, IL - Six Meter Club of Chicago. Santa Fe Speedway, 91st and Wolf Rd. Gates open 6 AM. Admission $5 at gate. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925 tel: 708-963-4922. Good hamfest but, restroom facilities are usually filthy.

Jun 30 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC testing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Hamfest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor | fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed | Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517.

tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Flash
Interrupt
Priority

Did I win?

I have a back-lit 16-button pad made by Western Electric that has those buttons on it with those letters, and it's mounted in a bakelite box with a battery inside and a speaker on the bottom. We used to hold them in front of our GE and Motorola microphones to control radio sites, including down UHF links to other sites, etc. Haven't used it in some time, so every time I take it down from the shelf I have to put a new 9v battery in it to get sound.

Hi Pete,

According to Amidon, the FT-50A-75 toroid has an AL of 2990. My calculations show that 5 turns through the core will yield about 75 uH and that 10 turns is nearly 300 uH. I'm very surprised you didn't notice a loss of highs with 10 turns, particularly above 5 or 6 KHz.

The distortion you're experiencing is almost certainly due to core saturation. The best speaker crossovers use air-core coils, but even those loaded with ferrite use rods, not toroids. If they did use a toroid, it would need to be much larger than an FT-50A.

My recommendation would be to either use cores with a much lower permeability or to wind air-core coils. The latter might actually be easier, because with more turns comes the need to use larger wire (in order to keep resistance to a minimum). You might have difficulty fitting the wire on a smaller form, particularly a 50-size toroid.

You could also use one coil in each side of the line, between the parallel capacitors. This would allow each inductor to be half the value of a single coil.

I was tuning through the 80 meter band this morning (17 April 1996, 1015 UTC) and I came across a very strong CW signal at around 3.925 Mhz. The station was transmitting 5 letter groups at around 15 wpm. CW tone was a bit watery. Given my QTH (Santo Domingo Dominican Republic) and the strength of the signal, my first guess is that the signal is from Cuba. Does anyone have more info on this station? 73 Bill N2CQR/HI8

5519. Radio Shack- You've got broken stuff? We cant fix it!

Blank stares?

I got suckered in by the radio shack repair center. I was a Navy electronics tech, I now am an electronics tech with Intel. I have worked on consumer electronics for YEARS, and "moonlighted" at an electronics repair shop fixing all sorts of consumer electronics...cd players, stereo gear, amps, tuners, tape decks, VCR's, TV's...AND CAMCORDERS. I have 20 years of repair experience, taught electronics for over four years...in other words, I know which end of a scope probe to use.

I just moved to Oregon, and I dont have a place set up in my house to work on things properly. So when my Sony CCD-FX520 8mm camcorder crapped, out, I opened it up for a quick look/see to see if I could fix it. Since I dont have access to circuit diagrams for camcorders anymore, and I no longer have access to factory parts like I used to, I took the camera to Radio Shack here in Beaverton, Oregon. I figured by the time I purchased the SAM's, paid for the parts, it would cost me just as much to fix it.

The sales droid gave me an "estimate" of $119 for labor, and $39 for parts (or therabouts, I dont recall exactly) and told me they would send it to UTAH for repair, told me it would be back in about three weeks.

Welp, in two weeks and two days a card arrived in the mail telling me my video camera was ready for pickup! JOY! HAPPINESS!

When I go to pick it up, they say, "SORRY, OUR TECHNICIANS WERE NOT ABLE TO FIX IT." The paper that came with it says this:

"BAD CHROMA BOARD, NOT ABLE TO FIX. UNIT APPEARS TO HAVE BEEN BUMPED."

What in the hell does that mean? It means the tech does not know whats wrong, has no hope of figuring it out, and is dropping a bogus hint that the camera got trashed by physical damage.

Remember, I have worked on these before. Also remember, I had it apart before it was shipped. No signs of damage anywhere. The unit turns on without the power being switched on, refuses to ff/rew/play/eject. And the rat shack tech thinks this is a CHROMA PROBLEM? Sheesh...

Ill either buy the SAMS and fix it myself, take it to a local shop, or send it to Sony. Last time I take anything to rat shack for repair. Seems like their techs are as knowledgable as most of their salesmen...

You are a user like the rest of us. Like any other newsgroup,
uk.radio.amateur is what you, the user, make of it.

Had you actually made any postings requesting help, you would
be aware that more often then not, you'll get helpful replies
by direct email.

Had you replied to another users request for help, you would
be aware that more often than not, you'll get a grateful reply.

If you want to just sit back and read what everybody else posts,
you are at liberty to do so, but it's no good complaining when
you don't like what you see.

Have you tried asking Demon for your ten quid to be refunded?

Sounds like a parasitic oscillation in the stereo audio PA. Try putting
a resistor across the coil (start with 1k and work down) and see if that
stops the distortion.

As a future ham, maybe you should pay attention to the underlying point here, the reason these people are leaving ham radio. It is time for all of us as a group to broaden our horizons and look to the future. The attidude that "because I had to learn code, you should to" is obsolete and immature. I'm not suggesting that there is anything wrong with code. I just feel that there is PLENTY of space for everyone to enjoy our hobby and no one person should be excluded for ANY reason, including wether or not they want to learn an old and outdated form of communication. Should everyone who can't read latin be excluded from church?

As a future ham, maybe you should pay attention to the underlying point here, the reason these people are leaving ham radio. It is time for all of us as a group to broaden our horizons and look to the future. The attidude that "because I had to learn code, you should to" is obsolete and immature. I'm not suggesting that there is anything wrong with code. I just feel that there is PLENTY of space for everyone to enjoy our hobby and no one person should be excluded for ANY reason, including wether or not they want to learn an old and outdated form of communication. Should everyone who can't read latin be excluded from church?

A couple of years ago, an Israeli environmental group was looking into
migratory birds hitting a shortwave transmitting array proposed for
installation in their flight path. This can be a real problem. Ask
in sci.environment, someone from the study group may still hang out
there. (Note however that VOA has some large arrays on the Eastern
flyway, and they don't have a bird kill problem. It may be because
all the birds who used to fly that particular route have already
been killed, or somehow learned to modify their flight paths to
avoid the hazard.)

Birds normally won't fly into EHV power lines because the intense
electric field surrounding the lines actually repels the birds and
also warns them away. But the birds can't sense RF, and the field
strength of shortwave antennas normally isn't high enough to actively
repel them. So they can fly right into a wire antenna array under low
visibility conditions. (This usually isn't a problem for ham antennas,
or for residential electric distribution lines, because they aren't
high enough to be in the migration flight path, EHV lines and VOA
style wire arrays are high enough. Ducks, geese, etc generally are

flying at a couple hundred feet or more altitude during migration, descending only to land and feed.)

Birds can also fly into tall buildings or towers under low visibility conditions. The Empire State building had this problem when it was initially constructed. And there have been numerous reports of bird kills at windplant sites, particularly raptors, who seem to be attracted to the motion. They'll do a stoop attack, and wind up chopped to bits by the spinning blades. This is a really serious problem, first because the birds are actively attracted to the spinning blades, and second because many raptors are endangered already and losses aren't easily made up. For most bird species, losing a few here and there to various strike hazards isn't a big deal, and represents only a small fraction of normal migration losses.
